

By the specialist for specialists

ProFlex® C. Flexible, compact, accurate.

The new generation of feeders for the compound industry ProFlex® C offers proven Schenck Process quality and stability and is based on the experience gained from two generations of feeders with flexible troughs.

Save space and time, adapt with ease and improve quality With an optimised design and flexible installation options, the ProFlex® C is perfect in every respect. To meet your individual spatial requirements, the system is available in two feeder and three container sizes. An off-centre auger arrangement allows up to eight feeders to be installed. The drive and auger setup can still be customised during assembly.
