CONiQ® Condition Monitoring for Screens, Feeders and their Exciters

- Measure mechanical vibration and temperature of exciters
- Measure 6D motion of screen or feeder
- Generate characteristic values
- Configurable alarming
- Suitable for local environmental conditions
- Minimized cabling

Application

Exciter

Bearing wear
Gear wear
Overheating damage

Screen or Feeder

Speed
Unusual or excessive motion
Structural failure
Exciter synchronization
(phase and force differential)
Overload and asymmetrical load
Spring breakage

Equipment

Sensors at the Exciter

Measurement of mechanical vibration at both sides of the exciter with acceleration sensors.
Measurement of screen movement with 6-dimensional sensor inside.
Measurement of oil temperature inside exciter.
Sensor cables can be fixed.

CONiQ View PC program for plant overview provides trending information, expert signal analysis tools.

Functions

The Top Screen Unit does all measurements. It receives commands from the Floor Unit for any action. It starts when powered up waiting the Floor Unit to connect and begin sending commands. LEDs indicate status information and activity. Measured data are transmitted periodically to the Floor Unit.

The Floor Unit controls up to three synchronized Top Screen Units, receives and evaluates their data. It calculates state variables and sets alarm outputs as configured.

The Floor Unit may be connected to plant control systems via industrial fieldbus or Ethernet networks.

The operator panel is used to display the calculated values and for parameterization.

Sensors

Two symmetrically arranged piezoelectric sensors
Pt100 for temperature monitoring
6D MEMS inertial sensor for machine motion

PASS service levels

Remote control from outside, e. g.
from Henderson/West Australia or
Darmstadt/Germany as a PASS service,
is possible.

Electro mechanics

External sensors are mounted into existing screw
holes. Specially designed plates are used to se-
cure the Top Screen Unit and to fix the cables.

Meaningful data interpretation

Due to OEM know how for screens, feeders
and their exciters CONiQ translates data to
helpful instructions.

MULTISTREAM® B Solids Flow Meter

- Flow rate measurement according to the impact plate principle
- Compact design - no loss of headroom due to additional chutes
- Cost effective, simple integration - offset-free arrangement of inlet and outlet
- Dust-tight stainless steel housing
- Weighing electronics can be integrated in the mechanical system

Application

MULTISTREAM B Solids Flow Meters are designed as enclosed in-line measuring systems for continuous acquisition of flow rates and totalized amounts. With flow rates up to 100 t/h, or max. 80 m³/h, these measuring systems can be used for

- flow rate and consumption measurement
- totalization and
- batching

of pulverized to granular materials with a grain size of up to 30 mm. Equipped with a controllable pre-feeder, MULTISTREAM B is also available for use as a feed system, upon request.

Its inlet/outlet arrangement without offset makes this measuring system specially suitable for economical integration into existing production plants.

Construction

The standard equipment of MULTISTREAM B Solids Flow Meters comprises:

- Stainless steel housing
- Impact plate
- Load cell
- Integrated electronic box

Designed as a complete module for local operation, the ECOCONT weighing electronics can be easily accommodated in the box which is integrated in the measuring system. Of course, it is also possible to install the weighing electronics outside of the measuring system, e.g. in the control cabinet.

Functions

Measuring systems operating according to the impact plate principle acquire the flow rate by means of a reactive force.

Guided by the inlet pipe, the material stream hits the impact plate mounted at a defined angle of inclination. The load cell and the weighing electronics acquire the horizontal component of the reactive force. Material build-ups do not affect the measuring result. Reproducible conditions of material feed, e.g. height and speed of fall or angle of impact, provide for highest accuracies.

If higher accuracies are required, check measurements are necessary which allow the measuring system to be calibrated without interrupting material flow. Requiring a presilo to be weighed, this additional equipment is available upon request.

Top View

Technical Data

	MULTISTREAM B80 Solids Flow Meters
Flow rate	min. 1 t/h – max. 80 m ³ /h (100 t/h)
Accuracy	±2 % of nominal flow rate
Measuring range	1 : 5
Operating pressure	-25 mbar to 50 mbar
Inlet/outlet flange dimensions (DIN)	200 mm / 200 mm
Weight	50 kg
Ambient temperature	-30 °C to +60 °C
Material temperature	max. 70 °C
Bulk density	min. 0,4 t/m ³
Grain size	max. 10 mm (single grain up to 30 mm)
Flow properties	pulverized to granular, non sticky

Accuracy

Stated accuracy relates to maximum (nominal) flow rate in the range of 20 % - 100 % (measuring range 1:5) under the following conditions:

- Constant material properties (flow behaviour, moisture, temperature, grain size)
- System installed and calibrated in accordance with our Installation and Calibration Instructions

Additional Requirements

Should you have additional requirements like:

- higher accuracy
 - use as a feeding system
- dust or gas explosion proof design, we kindly ask for a separate request.

Order Data

To be able to process your order smoothly and quickly, please remember to indicate order numbers complete with data below:

MULTISTREAM® G Solids Flow Meter

- Flow rate measurement on the deflection chute principle
- Dust-tight housing
- Compact design
- Cost effective, simple integration

Application

MULTISTREAM® G Solids Flow Meters are designed as enclosed in-line measuring systems for continuous acquisition of flow rates from 4 t/h to 1000 t/h (max. 1250 m³/h).

These measuring systems can be used for

- flow rate and consumption measurement
- totalization and
- batching

of pulverized to granular materials with a grain size of up to 30 mm. Equipped with a controllable pre-feeder,

MULTISTREAM® G is also available for use as a feed system, upon request.

Thanks to its enclosed, rugged design, this measuring system is the answer to limited space and enclosed conveyor routes.

Construction

The standard equipment of MULTISTREAM® G Solids Flow Meters comprises:

- Sheet metal housing,
- Guide and measuring chutes,
- Load cell,
- Measuring force transmission to load cell arranged outside of material room,
- Cable junction box.

The load cell arranged outside of material room, measuring system can be used at material temperatures of up to 100° C.

Higher temperature ranges are available, upon request.

Function

The deflection chute measuring system acquires the flow rate by using a reactive force.

Via guide chute, the material is leveled out, settled, then guided to the curved measuring/ deflection chute, free from shocks.

On the measuring chute the material is accelerated in radial direction. The resulting reactive force is acquired by the load cell.

If higher accuracies are required, check measurements are necessary which allow the measuring system to be calibrated without interrupting material flow.

Requiring presilo to be weighed, this additional equipment is available upon request.

ProFlex® C500 / C3000 / C6000 Volumetric Feeder

- Volumetric feeder system for powders and granules
- Fast, easy disassembly for cleaning the feeder and changing products
- Asymmetric design allows for a compact, in pairs arrangement of up to 8 feeder stations
- Flexible feed hopper with external agitation
- Control electronics available for the feeder

Properties

The ProFlex C feeder system is used for continuous volumetric feeding of bulk materials such as powders and granules.

The ProFlex C has been designed specially to meet the demands of your flexible processes: the components can be easily disassembled, the feed unit changed and the feeder cleaned using one tool only.

The asymmetric design of the ProFlex C allows for a compact, in pairs arrangement of up to 8 feeder stations. Discharge side orientation can be swapped in a few simple steps at any time.

The ProFlex C is available in three different sizes and can be equipped with a range of extension hoppers, helix and helix with center rod for adaptation to the characteristics of the bulk materials and to the required feed rate.

Design

The ProFlex C uses the principle of external agitation: An external drive agitates the wear-resistant elastomer feed hopper, producing a gentle material flow and a constant fill level in the discharge unit.

The special geometry of the ProFlex C discharge nozzle generates a low-pulse discharge at low screw rotational speeds.

One particular characteristic of the ProFlex C is its robust construction.

There is a range of electronic components to choose from, in order to best match the feeder to the respective application. From junction boxes to complete electronic controls.

You can choose the elements to match your needs and requirements.

ProFlex C Electrical System Variants

Junction box

1 – Junction box/housing 2 – Frequency convertor (helix drive) 3 – Set point presetting 4 – Motor Start/Stop (agitation drive)

Both drives come factory wired with a junction box. Electrical supply and control will be provided on site.

Mechatronic

This feeder comes completely factory cabled. The electrical components are included in the order and will be matched to suit each other. Manual/Auto mode switch included. Start/Stop and set point entry via the integrated touchpad (manual), or via contact and 4 ... 20 mA analogue signal provided by customer (auto).

DROP FORGED CHAIN QUALITY COMPONENTS

Part of the Stock BMH Product Line

Stock's Bulk Material Handling Division has built its business on designing and manufacturing material handling solutions in order to provide exceptional support to customers.

With the most trusted brands in the industry, Stock offers a diverse range of bulk material handling systems, equipment and components to cover a variety of needs.

Successful mechanical chain conveying methods for bulk material handling (chain conveyors, elevators, en-masse conveying) rely on quality equipment that is reliable and cost effective. Stock offers these quality solutions for a variety of application.

At the heart of these bulk material handling devices are the chain and chain components. Our

drop-forged chain links have been proven throughout a wide range of applications and in a variety of industries. In each of our products, the hallmarks of quality, reliability and cost effectiveness maintain our reputation as a world-class supplier.

With more than a century of experience in bulk material handling, Stock Fairfield efficiently and reliably moves raw materials and finished products for virtually every industry, in every country.

Drop Forged Chain Links

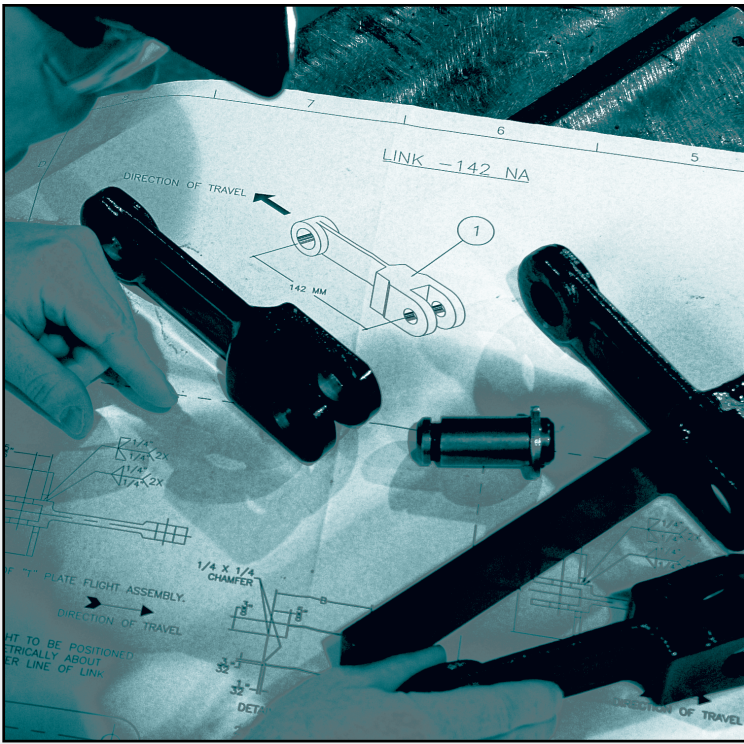

Our links have been proven throughout a wide range of applications in a variety of industries including:

- Power Generation
- Renewable Energy
- Mineral Processing
- Brewing/Malting
- Timber/Wood Processing
- Environment
- Coal
- Cement
- Chemical
- Grain
- Water
- Steel

High Strength Chain Links

- Drop forged from alloy steel.
- Precision machined.
- High tensile strength.
- Consistent dimensional accuracy.
- Manufactured to stringent quality procedures.

we make processes work

Chain Configuration

- Links are assembled in a configuration to match individual applications.
- This configuration can include scavenger, cleaning, or pad flights as required.
- Within a complete chain, flighted links are usually supplied at every single, second, or third pitch.
- Chain is usually supplied pre-assembled into 3 meter lengths complete with connecting pins.
- All assembled chains supplied with appropriate protective coating.

Stock Bulk Material Handling Chain Flights & Configurations

Plastic Sleeve

Deep T Plate Flight

H Flight

Chain Runners

- Chain is normally carried on special wear resistant manganese steel strip runners.
- There are three typical forms of strip runners: Plain Strip, Grooved Strip, and Supported Strip.
- All three types are available in a range of sizes.

Closed U Flight

Scoop Flight

Pad Flight

T Plate Flight

Scavenger/Digging Flight

APPLICATION REPORT

Factors to consider when choosing a Mucon® flow control valve

Kemutec is a world leader in the manufacture and supply of Powder Process Machinery, and has extensive knowledge of Flow Control Valves through its Mucon® brand. Below is a short discussion on some important factors to consider when selecting a valve.

How Do I Know Whether I Need a Flow Control Valve for my Application?

If you can answer yes to any of the following questions, you could well benefit from using a flow control valve in your process:

- Do you have slide valves that leak, jam or are stiff to operate?
- Do your butterfly valves cause bridging?
- Are you a flexible IBC user with no adequate means of regulating the rate of flow, or closing a partially used FIBC?
- Are large particles in your process getting trapped during closure, and still not preventing the flow of smaller particles and dust?
- Is dust a problem when transferring product from containers to processes?
- Does your process require replaceable contact parts to prevent cross contamination between batches?
- Is your current valve damaging fragile products?

What Should I Take into Account When Choosing a Valve?

Choosing a valve is very much dependent on the application that it is being used for i.e. the material characteristics, and the conditions in which the valve is to be installed. Some factors that will affect the choice of valve and diaphragm material are:

- Material bulk density
- Temperature conditions
- Chemical resistance of the product
- Pressure and vacuum

Cheaper is not necessarily better for end users. Kemutec has been called to customer sites in the past to replace cheaper copies of the Mucon® Iris Diaphragm Valve (IDV) because of problems, mainly to do with the wrong valve having been sold for the application.

Can I Fit the Valve Myself?

Yes you can. Mucon® hand operated Iris Diaphragm Valves are safe and easy to handle, and valves are supplied with comprehensive

installation and diaphragm fitting instructions. However, Kemutec does advise that an experienced electrician should install electrically operated valves.

How Can I Extend the Life of My Valve?

As with any piece of process equipment, regular maintenance and servicing is the easiest way to extend the life of a valve. Depending on the application and frequency of operation, regular maintenance of your valve can make them last decades. Kemutec has recently taken an order for a replacement diaphragm from a customer in Germany. The original valve was bought back in 1969, a testament to the durability of Mucon® IDVs.

Why Choose a Mucon® Valve?

- A proven track record with over 65 years of product quality and reliability
- The largest range of valves and diaphragm materials on the market
- Customer support from an experienced team with extensive process knowledge

Whatever the duty, whatever the product, Mucon® has a valve to suit your application in a range of sizes and diaphragm materials. Iris Diaphragm Valves are the ideal choice for any filling, weighing or bagging off application. They are also suited to specialized applications such as a sealing gland on cooling baths for extruded pipe or cable, fish transportation tanks, a restrictor in a canning line, or for the centering of pipes in a welding jig.

Engineering and design rules for hopper scales with **SENSiQ™**

- ❖ **Defining hopper scales**
- ❖ **Dimensioning hopper scales**
- ❖ **Selecting load cell mounts**
- ❖ **Ambient influences and shunt forces**
- ❖ **Hopper scale accuracy**

Rules to ensure proper operation and high accuracy

1) Defining hopper scales

Net weight acquisition systems mounted on load cells and load application elements, e.g. tanks, silos, reactors, mixers, agitator hoppers.

The more closely these rules are observed, the lower the local influences on operation and accuracy.

The choice of the right mechanical components for the particular application, proper installation and consideration of environmental conditions, e.g. piping connectors, wind loads and process sequence, are of particular importance to accuracy.

Our installation and commissioning instructions as well as the relevant spec sheets detail use, configuration and functions. If hoppers are subjected to shunt forces from existing piping connections, pay particular attention to the rules stated under Item 4.

Proper scale dimensioning requires the following details:

- ❖ Weighing range
- ❖ Required resolution
- ❖ Required accuracy (legal-for-trade?)
- ❖ Number of load points (load cells)
- ❖ Dead load (hopper's own weight)
- ❖ Asymmetric load
- ❖ Dynamic loads
- ❖ Wind loads

2) Dimensioning hopper scales

The load cell rated capacity needed is calculated using the following formula:

$$\text{L/C rated capacity} = \frac{(\text{weighing range} + \text{tare load}) * \text{safety factor}}{\text{number of support points}}$$

To acquire load cell output signal/digit (Ua/d):

$$\text{Ua/d} = \frac{\text{weighing range} * \text{sensitivity} * \text{supply voltage} * 1000}{\text{number of L/Cs} * \text{load cell rated capacity} * \text{resolution}}$$

With 3 load points, factor in at least 25% for safety. With 4 support points, as a rule of thumb, use 3 load points. In the worst case scenario, if the construction is very rigid, the load can even act on just 2 support points.

Select the next largest available load cell rated capacity and relevant quality using the relevant spec sheet.

With legal-for-trade scales, ensure minimum load cell utilization in accordance with spec sheet.

Minimum utilization = weighing range: total of load cells rated capacities (with SENSiQ™ RT load cells at least 15 %).

With non-legal-for-trade scales, depending on duty and application, 5 % load cell utilization will suffice.

Observe minimum input signal of evaluation electronics provided.

Example:

Weighing range:	15 t	Result: 4.275 µV/d
Sensitivity:	2.85 mV/V	
Supply voltage:	12 V	
Number of load cells:	4	
Load cell rated capacity:	10 t (SENSiQ™ RTN C3)	
Resolution:	3000 digits (5 kg increment value)	

When using pivots (partial load measurement), first determine the load on every weighing support point.

Then establish load cell output signal as described above.

The achievable accuracy depends on the material used (solids, liquids; see Item 3, SENSiQ™ fixed mounts (SFM)).

3 load distribution examples

A) Round hopper
(1/3 each)

B) Square hopper
(1/4 each)

C) Square hopper
(center of gravity undefined)

3) Selecting load cell mount

Select load cell mounts depending on application and accuracy requirements

SENSiQ™ elastomer mount (SEM)

Typical applications: hopper scales, roller table scales, crane scales and road weighbridges.

Self-centering and resistant to lateral forces. Insensitive to max. $0.6^\circ = 10 \text{ mm/m}$ inclination of support structure. Service-friendly and maintenance-free. Observe lateral stiffness of elastomer (differs depending on rated capacity) (the admissible lateral force on load cells must not be exceeded at nominal hopper deflection).

Limit stops and lift-off protection have to be provided by user.

More information can be found in spec sheet BVD-2044.

SENSiQ™ secure mount (SSM)

Typical applications: hopper, silo, tank, and mixer scales. Extended SENSiQ™ elastomer mount complete with head and foot plates, integrated limit stops and lift-off protection. Up to and including rated capacity of 33 t, the maximum horizontal force is 10% of the rated capacity of the mount and maximum vertical lift-off force is 15% of rated capacity of the mount. With a rated capacity of 47 t or higher, the maximum horizontal force and vertical force preventing lift-off is 20 % of the rated capacity of the mount. For applications with higher horizontal and lift-off loads, use the SENSiQ™ safety mount PLUS with a maximum horizontal and lift-off capacity of 40 % of the rated capacity of the mount for rated capacities of between 10 t and 220 t.

If the loads on limit stops and lift-off protection are even higher, take additional actions (e.g. fit external bumpers and external lift-off protection). Strictly observe specified arrangement (see sketch).

More information can be found in spec sheets BVD-2083, BVD2443 and BVD2444.

SENSiQ™ pendulum mount (SPM)

Typical applications: hopper and vehicle scales. Designed for extremely rugged environments. Suitable for maximum measuring accuracy. Self-centering, maximum admissible inclination of existing connecting surface $0.6^\circ = 10 \text{ mm/m}$.

Smaller spring deflection compared with SENSiQ™ SEM/SSM as there is no elastomer mount.

Pendulum limit stops and lift-off protection have to be provided by user.

More information can be found in spec sheet BVD-2025.

SENSiQ™ fixed mount (SFM)

Typical applications: for simple weighing tasks on hopper scales with $\geq 5 \text{ t}$ weighing range, e.g. level measuring systems, equipped with one or two load cells (partial measurement). Simple, rugged, flat design, resistant to lateral forces. Sufficient accuracy with defined center of gravity, e.g. for liquid hoppers. Dimensions compatible with SENSiQ™ secure or elastomer Mounts.

Installation on common tilting line. Typical accuracies (in relation to full scale value) without influence of the immediate environment:

$\geq \pm 0.5 \%$ with liquids

$\geq \pm 1 \%$ with solids

Maximum lateral force in any horizontal direction may be 10 % of the rated capacity of the mount. For higher lateral forces, the SENSiQ™ fixed mount PLUS with a maximum admissible lateral force of 40 % of the rated capacity of the mount is available for rated capacities of between 10 t and 220 t.

More information can be found in spec sheets BVD-2182 and BVD2442.

Load distribution depends on load carrier / hopper symmetry and horizontal forces (wind load, agitator, pipe connections). In contrast to a full load measurement using load cells, these forces may cause considerably greater measuring errors depending on the application point and effective direction.

4) Ambient influences and shunt forces

❖ **Appropriate measures during planning and design can minimize, or eliminate, shunt forces.**

Shunt forces

The load to be determined may only be applied via defined support points. If partial loads bypass the defined support points (shunt forces), measuring errors will result.

Shunt forces may occur if:

- ❖ the load receptor makes contact with the permanent construction (foundation, frame, support structure)
- ❖ pipes and other connections to the scale (e.g. agitator cable) in direction of load cell load are too rigid
- ❖ limit stops are improperly mounted/adjusted or blocked by grime, material residues or corrosion
- ❖ compensators are too rigid or grimed (particularly through material residues with bellows-type compensators)

Examples of how to avoid shunt forces

Fig. 1

Free flanged inlet connection, if necessary, with labyrinth ring / cover.

Fig. 2

Horizontal supply line sufficiently long to avoid faults resulting from pipe deformation.

Important: Never support supply line near hopper.

Rule of thumb: $L = 30 \times \text{pipe diameter}$

Always support pipes on scale platform.

Fig. 3

If pressure (or underpressure) is present on hoppers, ensure identical compensator diameter!

Fig. 4

Fit compensators or flexible hoses to ensure flexibility of extremely rigid lines with large diameters. Dimension "L" can be halved using a pipe loop (also for Fig. 2).

- ❖ Ensure sufficient pipe bend length
Design pipe bend horizontally
- ❖ Mount support on the side away from the hopper only
- ❖ If pipes are very thick, the dual compensators shown considerably reduce shunt forces.

Fig. 1

Fig. 2

Fig. 3

Fig. 4

Additional considerations:

Provide venting for cooling/heating jacket. Note level to which hopper heater is filled.

Consider operating state (pressure, temperature, heating).

- ❖ Reactor and piping pressures cause weighing errors via pipe cross-section.

Remedy: Provide pressure compensation, operate at zero-pressure.

Mount pipes horizontally

- ❖ Note heating of pipes through internal medium or radiating heat.

Typical pipe elongation: $0.1 \text{ mm}/10^\circ \text{ C} \times \text{length}$

Irregular warming can cause the pipe to behave like a bimetal thus generating additional bending forces.

Environmental influences through heat, moisture

- ❖ Protect load cells from direct insolation and drafts.

Remedy: Provide insulating jacket or enclosure.

- ❖ Avoid thermal gradients (heat discharge from hopper via load cells).

Remedy: Provide heat insulating plates.

- ❖ Protect load cell cable from mechanical damage (rodents) and moisture.

Remedy: Run load cell cable in protective tubes.

Design/installation considerations

- ❖ Design platform construction with sufficient stiffness.

- ❖ Ensure deflection $L/1000$

- ❖ Run pipes and mount compensators horizontally.

- ❖ Compensate vertical lines as gently as possible.

- ❖ Provide potential equalization between load cell housing and evaluation electronics.

Use existing mechanical construction or provide PE line.

- ❖ Connect weigh hopper to ground of user construction using flexible connector.

- ❖ Design load cell output lines horizontally, plane parallel and sufficiently rigid.

- ❖ To avoid mechanical stresses from thermal expansion, always use genuine Schenck Process parts (foot plate and load cells of same material).

- ❖ To be able to calibrate and verify your scale, ensure that standard weights of at least 20% of its rated capacity can be applied.

(This is the prerequisite for legal-for-trade applications).

5) Hopper scale accuracy

The main requirement for attaining the desired scale weighing accuracy is selecting the right load cell rated capacity and quality.

Decisive parameters:

- ❖ Characteristic deviation (non-linearity and hysteresis)
- ❖ Temperature dependencies of zero signal and characteristic
- ❖ Resolution
- ❖ Measurement value creep
- ❖ Repeatability

With hopper scales, the achievable system accuracy is essentially determined by the ambient influences and process sequence.

Key words:

- ❖ Accurate mounting of supports.
- ❖ Repeatability influenced by pipes, compensators and other connections.
- ❖ Stiffness of mounting platform.
- ❖ Agitator vibrations, center of gravity displacement

With legal-for-trade weighing systems, use load cells of minimum quality C3, and evaluation electronics approved for trade use.

If scale is properly configured in accordance with the instructions provided in these documents, the (legal-for-trade) system accuracy will be comfortably below 0.1%.

With non-legal-for-trade weighing systems, when using SENSiQ™ RT load cells with 0.05% accuracy and proper installation in conjunction with Schenck Process evaluation electronics, 0.1% system accuracy can be achieved.

These accuracies are obtained through input of all scale parameters, i.e. by "theoretical calibration" without application of weights.

Schenck Process will be glad to back you up with:

- ❖ **Advice**
- ❖ **Engineering**
- ❖ **Design**
- ❖ **Service**
- ❖ **Checks**

RTB

Ring torsion load cell

- Legal-for-trade design according to OIML
- High accuracy, even for very small application areas (for legal-for-trade applications up to at least 15 %)
- Low power consumption due to high input impedance of 1100 Ω
- ATEX/IECEX approval for category 1GD (intrinsically safe to operate) or 3GD (not intrinsically safe)
- Protection class IP68

Application

The load cell as transducer converts the mechanical input variable force proportionally into the electronic output variable voltage.

The specific model of the ring torsion load cell offers the user specific advantages:

- The extremely small frame size simplifies the use in almost all weighing device applications
- The robust construction allows problem-free transport, installation and operation, also under rough ambient conditions (disturbance forces, temperature)

Construction

- Hermetically sealed encapsulation through laser welding and glass-metal implementation (IP68)
- Corrosion protection through the use of stainless steel

- All electrical components are located inside the load cell and thus are optimally protected
- The high quality and robust connecting cable is guided radially into the load cell
- Mechanically compatible with the RTK type series

Function

- High reproducibility
- High long-term stability and therefore consistently high accuracy permanently
- Extremely small measured value influence as a result of lateral forces
- High functional safety, even with frequently unavoidable impact loads and constraining forces, as well as with electrical interferences
- Torque-free force input/output as a result of the direct, vertical power train

Installation accessories:

SENSiQ™ Secure Mount SSM, SENSiQ™ Elastomer Mount SEM

Ring-Torsion Load Cells RTN

- OIML approved as suitable for trade use (up to 5000 d and 7500 d in case of multi-divisional scales)
- High accuracy, even for very small utilisation ranges (down to 15 % in case of trade use according to OIML)
- High output signal and, thus, high-resolution of useful signal range
- Low power consumption allows realisation of multi-scale systems with simple evaluation electronics
- Use in hazardous zone with protection class Ex ia IIC T4 Gb / Ex ia IIIC T125 °C Db or protection class Ex nA IIC T4 Gc / Ex tb IIIC T125 °C Db
- Protection class IP68

Application

Acting as a transducer, the load cell converts the mechanical input signal, the load, proportionally into the electrical output voltage.

The consistent optimization of the ringtorsion load cells offers additional advantages:

- The extremely low headroom simplifies the use in almost all weighing applications
- The sturdy design enables easy transport, installation, and operation, even under very harsh environmental conditions (e.g. aggressive media, interfering forces, or extreme temperatures)

Construction

- Hermetically sealed due to laser welding; protection class IP68
- High corrosion protection due to the use of electrolytically polished stainless steel
- All electrical components are inside the load cell and are thus optimally protected
- The high-quality, sturdy connection cable is lead radially into the load cell
- The RTN load cells are compatible with earlier ring-torsion load cells if our adapter kits are used

Functions

- High measuring sensitivity
- High repeatability
- High long-term stability and, thus, continuing and consistently high accuracy
- Minimal effect on accuracy by side forces
- High reliability and availability, even in case of unavoidable shock loads, constraining forces or electrical interferences
- Integral excessive voltage protection
- Moment-free load input/output due to direct, vertical force flow

Load Cells VBB and Load Cell Mounts VEB

- **Highest accuracies (up to 6000 increments to OIML R60)**
- **Hermetically sealed due to laser welding (IP68)**
- **Use in hazardous zone with protection class
Ex ia IIC T4 Gb / Ex ia IIIC T125 °C Db
or protection class
Ex nA IIC T4 Gc / Ex tb IIIC T125 °C Db**
- **Optimized for parallel connection through perfect calibration**
- **6-wire circuit**
- **100 % stainless steel**

Application

Load cells of the VBB type are designed to convert the mechanical input signal, the load, proportionally into the electrical output voltage.

Combined with the corresponding VEB elastomer mounts, they are very suitable for use with platform, batching, and hopper scales. Their compact design simplifies the integration in any existing construction.

The rugged design of the load cells and mounts ensures reliable operation even in severe environments.

Construction

Entirely made of stainless steel and hermetically sealed by laser welding, the VBB load cells are connected by using a high-quality shielded 6-wire PVC cable.

The 6-wire circuit provides for a measuring signal which is insensitive to connecting cables of different lengths.

Functions

- High calibrating accuracy, thus, optimal prerequisites for the parallel connection of load cells
- High degree of measuring signals repeatability
- Damping of side forces through the elastomer mount
- Self-centering after side load
- Minimal effect on accuracy by side forces

VDW Self-Centering Pressure Load Cell

- Legal for Trade Use Pressure Load Cell, Optimized for Use in Vehicle Scales
- Self-Straightening Function
- Simple Installation and Orientation thanks to Matching Accessories
- Comparison of Characteristic Value and Output Impedance Simplifies Corner-Load Comparison in Multiple-Cell Scales
- Excellent Protection Against Electromagnetic Influences thanks to an Optimized Screening Concept
- Integrated Over-Voltage Protection
- Laser-Welded, Protection Class IP 68 1m/100hr; IP69K

Application

Acting as a measuring transducer, the load cell converts the mechanical input variable load into the electrical output variable voltage.

The VDW has been consistently optimized for use in vehicle scales. :

- The design of the cell as a self-straightening stabilizer link keeps transverse forces away from it, even if the bridge is displaced horizontally to a large degree.
- The design allows for a rapid and cost-effective assembly of the cell with no expensive mounting parts.
- Matching accessories and fitting aids simplify installation.

Construction

- Hermetically sealed thanks to the laser-welding (IP68)
- High corrosion protection thanks to the use of rustproof materials - incl. high-grade steel cable screw connections
- Built-in over-voltage protection
- All electrical components are located in the interior of the load cell and are thus optimally protected.
- Laser-welded, protection class IP 68 1m immersion depth /100hr, or IP69K (steam jet cleaning)

Function

- High measuring sensitivity
- High reproducibility
- High long term stability and thus continuously high accuracy over time.
- Characteristic value and output impedance of the VDW are compared to each other such that the corner-load comparison for a multiple-cell scales generally becomes redundant
- The optimized screening concept (no conductible connection from cable screen to load cell body) gives excellent protection against electromagnetic influences..

Weighbeam DWB 11.5 ... 25t

- Simple and economical installation through direct screwing onto the connecting structure
- Transmission of high interferential forces and moments at minimal impact on measurement value
- Extremely low headroom
- Designed for rugged environment
- Suitable for construction of service free scales
- Option: HT-type for service temperature up to 120°C

Application

- Silo and hopper scales
- Crane scales
- Rail weighbridges
- Scrap bucket, roller train, and tundish scales
- Platform scales

Construction

- Low and compact design
- Galvanized surface
- Protected to IP 67

Function

- High degree of reliability and availability
- Virtually impervious to shock loads and unavoidable side forces
- No need for additional tie-rods and hold-downs

Contact surfaces quality requirements

- Material "A":
Usually, construction steel of a minimum quality S355 is used
- Plate thickness "B":
Plate thickness depends on total construction stiffness. Connecting surfaces plate thickness must be at least 40% of weighbeam height
- Surface quality "C":
The requisite mean rough value of connecting surfaces is around 6.3µm
- Planeness "D":
The maximum admissible tolerance of each contact surface is 0.05 mm
- Angular error to vertical axle "E":
The connecting surface angle may differ from the vertical axle in both planes of view by max. $\pm 2^\circ$
- Plane parallelity "F":
The upper and lower connecting surfaces to the weighbeam must be plane parallel to minimum 0.1 mm

SENSiQ[®] Weighbeam

WB 40 t ... 600 t

- The original, proven over more than 30 years, optimized to the latest state of technology
- Expanded to an operating temperature from -40 °C ... 180 °C
- High precision with a maximum combined error of ± 0.07 % across the entire temperature range
- Extremely robust and maintenance-free, IP68
- 6-wire circuit
- Integrated sensor for temperature monitoring and compensation, and integrated overvoltage protection
- Separate installation of the connecting cable through plug connection on the Weighbeam, also available as hinged plug outlet

Application

- Ladle turret scale
- Ladle transfer car
- Scrap basket, roller and tundish scales
- Silo and bin weighers

Function

- Simple and cost-effective installation through direct bolted joint with the connecting structure without moving parts
- No additional straps or hold down bolts required
- High functional safety and availability, even with frequently unavoidable impact loads and constraining forces

Construction

- Compact, flat design
- From WB 50 t: Fit head for form-locking take-up of lateral forces
- Plug connection, also available as hinged plug outlet
- For maintenance-free scales operated under harsh conditions
- Transfer of high disturbance forces and torques with minimum measuring value interference
- High long-term stability
- High reproducibility
- Separate installation of Weighbeam and connecting cable possible
- Cable change without problems

Operating Principle

Requirements of the Quality of both Contact Surfaces

WB 40 t

WB 50 t ... 600 t

- **Material selection "A"**: Construction steel is used of at least S355 grade must be used.
- **Operating thickness "B"**: This depends on the stiffness of the overall construction. The operating thickness of the connect surfaces must be at least 40% of the the weighbeam height.
- **Surface quality "C"**: The average peak-to-valley height required of the contact surfaces is 6.3 μm .
- **Flatness "D"**: The maximum permissible flatness tolerance of each contact surface is 0.05 mm.
- **Angle error to the vertical axis "E"**: The permitted maximum value for the angle deviation of the contact surface to the vertical axis is $\pm 2^\circ$ in both planes.
- **Plane parallelism "F"**: The upper and lower contact surfaces to the weighbeam must be plan parallel to each other within at least 0.1 mm.

Measuring Eye, DMA Type

- **Compact sensor for measuring forces and masses**
- **Same sensor geometry for all load ranges**
- **Maintenance-free**
- **Hermetically sealed design, protection class IP68**
- **High corrosion protection through use of stainless steel**
- **Easy retrofit of existing silo structures**
- **No contact between sensor and material to be weighed**
- **ATEX categories**
 II 2G Ex ib IIC T6 Gb,
 II 2D Ex tb IIIC T85 °C Db
 II 3G Ex nA IIC T6 Gc
- **IECEX**

Application

The DMA measuring eye has been particularly designed for use as low-priced hopper level measuring system.

With very little effort it can be retrofitted into existing structures permitting gravimetric level measurement.

Other possible applications are, for instance, pre-assembled measuring supports or beams as well as threshold messages for cranes.

Construction

The DMA measuring eye is made of stainless steel. The knurled pressing-in area on circumference transmits the deformations of the supporting structure to a web equipped with strain gauges.

Measuring body and cable outlet are connected by laser welding which produces a hermetical sealing effect.

Function

The DMA measuring eye is pressed into the supporting structure of the construction to be weighed.

When the supporting structure is loaded, the resulting deformations generate a voltage change proportional to applied load.

The following types of measuring eyes are available

- **DMA-V:**
Standard measuring eye with complete strain gauge full bridge
- **DMA-H:**
Special variant with strain gauge half bridge (if more than 4 measuring eyes/system are used)
- **DMA-V-ÜS:**
Measuring eye with complete strain gauge full bridge and additional overvoltage protection, e.g. for use in railway tracks
- DMA-V, DMA-V-ÜS and DMA-H are also available as **ATEX and IECEx version**

Typical applications

Normal force measurement

Measuring eye mounted on vertical silo supports

Section A-A

Variant	L
DMA-V DMA-H	46
DMA-V-ÜS	62
DMA-V-Ex DMA-H-Ex	71

Lateral force measurement

Measuring eye mounted on horizontal silo supports

Technical Data

The technical data apply to one DMA-V measuring eye or a pair of DMA-H measuring eyes (combined to form a Wheatstone bridge).

		DMA-V or 2x DMA-H		ATEX-Variant
Measuring principle		Normal force measurement	Lateral force measurement	
Required rated stress	σ, τ	$\sigma \geq 30 \text{ N/mm}^2$	$\tau \geq 15 \text{ N/mm}^2$	σ, τ , see left side
Sensitivity at required rated stress	C_n	$\geq 0.3 \text{ mV/V}$		
Input resistance	R_e	380 Ω		1060 Ω
Output resistance	R_a	350 Ω		1000 Ω
Ref. supply voltage	$U_{sref.}$	10 V		
Max. supply voltage	$U_{smax.}$	12 V

Zero signal temperature coefficient	TK_o	$< 1.5 \mu\text{V} / \text{V} / 10 \text{ K}$		
Material		Stainless steel		
Weight with cable		0.6 kg		
Protection class		IP68 (laser-welded)		
Cable standard		PVC cable $\varnothing 5.4 \text{ mm} \times 15 \text{ m} / -30 \text{ °C} \dots +85 \text{ °C}$		
Cable Ex		TPE cable $\varnothing 6,5 \text{ mm} \times 15 \text{ m} / -40 \text{ °C} \dots +120 \text{ °C}$		
Connection assignment		Black: input + 82	/	blue: input - 81
		Red: output + 28	/	white: output - 27
		Black-yellow: screen		

System and switching accuracies depend on several factors, e.g. hopper geometry, installation site and measuring task. Typically, system accuracies of $\pm 0.5 \%$ for lateral force measurement and $\pm 1.5 \%$ for normal force measurement can be obtained. The switching accuracies for preset fill levels (setpoints) are approx. $\pm 0.2 \%$ (each related to full scale).

These accuracies require highly qualified engineering and proper and workmanlike installation.

Projection notes

To determine whether an existing hopper can be retrofitted with Schenck Process measuring eyes, calculate the rated stress as under:

- **Normal force measurement (required rated stress $\sigma \geq 30 \text{ N/mm}^2$)**

$$\text{Rated stress } \sigma \text{ in } [\text{N/mm}^2] = \frac{(\text{Mass of hopper contents in } [\text{kg}]) \times 10}{(\text{Number of supports}) \times (\text{supports cross-sectional area in } [\text{mm}^2])}$$

- **Lateral force measurement (required rated stress $\tau \geq 15 \text{ N/mm}^2$)**

$$\text{Rated stress } \tau \text{ in } [\text{N/mm}^2] = \frac{(\text{Mass of hopper contents in } [\text{kg}]) \times 10}{(\text{Number of cross members}) \times 2 \times (\text{cross member area in } [\text{mm}^2])}$$

SENSiQ® Weighdisc

WD 15 t ... 200 t

- The original, proven over more than 10 years, optimized to the latest state of technology
- Operating temperature from -40 °C ... 180 °C
- High precision:
combined error only 0.07%
- Air chamber to the direct bolted joint, no bearing elements needed
- Extremely robust construction, IP68, overvoltage protection
- Minimum installation space
- 6-wire technology and integrated Pt100

Application

- Ladle turret scale
- Ladle transfer car
- Scrap basket, roller and tundish scales
- Rail weighbridges
- Silo, container and furnace scales

Construction

- Very low installation height and installation space
- Two contact surfaces for a direct bolted joint
- Robust measuring element without membrane

Function

- Simple and cost-effective installation through direct bolted joints between the upper and lower connecting structure without moving parts
- High functional safety and availability, even with impact loads and constraining forces
- Minimum measuring value interference despite the transmission of large interference forces and moments
- For maintenance-free scales operated under harsh conditions
- High overload capability
- High reproducibility
- High long-term stability
- Connection dimensions and electrical data are compatible with the earlier design of WDI / WDI-K according to data sheet BV-D2206 / BV-D2220
- The plug connection differs from earlier designs of the WDI / WDI-K but is identical to the plug connection of the SENSiQ Weighbeam WB type series.

Requirements of the Quality of both Contact Surfaces

- Material selection "A":
As a rule, construction steel is used of at least S235 grade.
- Operating thickness "B":
This depends on the stiffness of the overall construction. The operating thickness of the contact surfaces must be large enough such that the deflection under the rated load is less than 0.05 mm.
- Surface quality "C":
The average peak-to-valley height required of the contact surfaces is 6.3 μm
- Flatness "D":
The maximum permissible flatness tolerance of each contact surface is 0.03 mm
- Plane parallelism "F":
The upper and lower contact surfaces to the Weighdisc must be plan parallel to each other within at least 0.1 mm

Installation note:

If the WD is mounted on an interim plate, the entire unit can be removed more easily. Otherwise, the entire load has to be dismantled in order to access the middle fixing screw.

Weighbeam DWR 50 ... 70 t

- Service temperature up to 120°C
- Separate mounting of connecting cable through connector
- Simple mechanical design
- Simple and economical installation through direct screwing onto the connecting structure

Application

- Scrap bucket, roller table weighing and tundish scales
- Silo and hopper scales
- Crane scales

Construction

- Rugged design, low headroom
- Plug-in connector
- High-grade stainless steel

Function

- Simple and economical installation through direct screwing to the connecting structure without movable parts
- No need for additional tie-rods and hold-downs
- High long-term stability
- High degree of repeatability
- Separate mounting of weighbeam and connecting cable possible
- Easy cable exchange

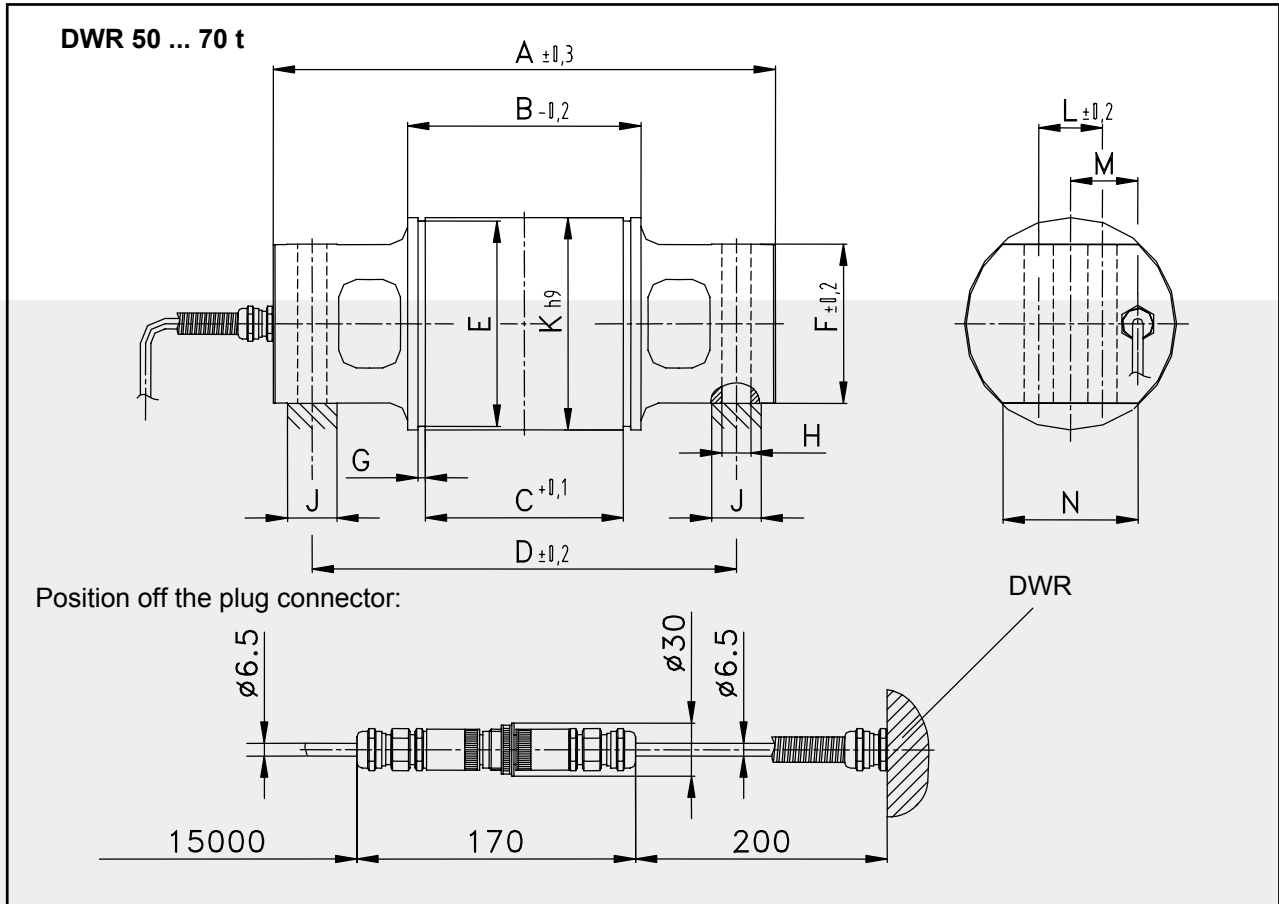

Operating principle (application tundish scale)

Connecting surface quality requirements

- Material quality "A":
Usually construction steel of a minimum quality S355 is used
- Plate thickness "B":
Depends on stiffness of total construction. Plate thickness of connecting surface must be at least 40% of the weighbeam height (dimension F on page 3)
- Surface quality "C":
Requisite mean roughness of the connecting surfaces is 6.3 μm
- Planeness "D":
Maximum admissible planeness tolerance within the two outer conjoint connecting surfaces for each weighbeam is 0.05 mm
- Angular deviation error to vertical axis "E":
Angle deviation of connecting surface to vertical axis in both planes of view must not exceed $\pm 2^\circ$
- Plane parallelism "F":
Upper and lower connecting surfaces have to be plane parallel to minimum 0.1 mm
Plane 1:
Possibly execute load input convex (detail „X“).
Plane 2:
Construction is angle compensating (also for elastic deflections).

SENSiQ™ Elastomer Mount (SEM) Elastomer Mount for SENSiQ™ RTN/RTB 0.25 t ... 470 t Load Cell

- Self-centering
- Cushions dynamic loads
- Stable to shear forces
- Simple, robust and flat construction
- High resistance to environmental conditions and chemicals
- Easy to assemble
- Maintenance-free

Application

For technical measurements the elastomer bearing provides ideal load application to Schenck Process ring torsion load cells.

It is used for all industrial scales such as e.g. bin weighers, roller table scales, crane scales and road weighbridges.

Construction

The Elastomer Mount consists of the pressure piece for load application, the elastomer for self-centering and the base plate for dissipating the load into the supporting construction.

The lateral play must be limited depending on the application. Similarly a lifting restraint should be fitted to prevent lifting.

Function

The weight to be measured is applied to the load cell by means of the pressure piece. The design means that the vertical deflection is extremely small and proportional to the load.

Any lateral forces deform the elastomer in a parallel manner. It automatically will center itself as soon as the lateral force ceases.

A load distribution plate above the pressure piece may be necessary depending on the permissible bearing pressure of the load pick-up. This should always be checked for a transition from steel to concrete.

Important Notice:

A non-reproducible application of force into the load cell may occur when lifting and re-applying the load application elements, causing measuring errors in the scales overall. The Elastomer Mount therefore may never completely be unloaded. The minimum pre-load should be large enough so that there always is a non-positive connection between the load cell and the pressure piece or base plate.

Elastomer Mount SEM 0.25 t ... 0.50 t for RTB load cells

- the elastomer is located above the pressure piece
- the pressure piece is bolted or pinned to the connecting structure by means of two straps on the side
- height compensation (max. 5 mm) is performed using shims
- the bearing is aligned using by moving the base plate that is secured using the fixing pieces to be pinned or bolted on.

Elastomer Mount SEM 1 t ... 4.7 t for RTN load cells

- the elastomer is located above the pressure piece
- the pressure piece is bolted or pinned to the connecting structure by means of two straps on the side
- height compensation (max. 5 mm) is performed using shims
- the SEM is aligned using by moving the base plate that is secured using the fixing pieces to be pinned or bolted on
- it also may be anchored using a centering bolt.
- The head and base of the Elastomer Mount can directly be connected to the connecting structure by bolting them to it. By using the optionale weld-on plates, there is no need to drill and thread the connecting structure. The weld-on plates are welded onto the construction after the load receptor has been aligned. They then hold the bearing with their tap holes. The weld-on plates for the load range 1 t ... 4.7 t can be used above and/or below the SEM. The additional height will be 15 mm each.

Elastomer Mount SEM 10 t ... 470 t for RTN load cells

- the elastomer is located beneath the load cell
- the pressure piece is secured using a centering piece that is bolted or pinned to the connecting structure
- height compensation (max. 5 mm) is performed using shims
- the SEM is aligned using by moving the elastomer that is secured using straps to be pinned or bolted on
- the head and base of the Elastomer Mount can directly be connected to the connecting structure by bolting them to it. By using the optionale weld-on plates, there is no need to drill and thread the connecting structure. The Elastomer Mount is welded directly to the lower side of the bearing. Additional construction height of the weld-on plate:
 - SEM 10 t ... 22 t: 20 mm
 - SEM 33 t: 25 mm
 - Other nominal loads are available on request

SENSiQ™ Secure Mount (SSM)

Bearing unit for SENSiQ™ Ring-Torsion Load Cells RTN/RTB 0.25 t ... 470 t

- Complete load cell bearing with horizontal reset function and built-in shock absorber element
- Horizontal limit stop and lift locks
- Absorbs up to 20 % of the nominal load along the horizontal axis and prevents lifting
- Legal-for-trade
- Safety without shunt forces
- High resistance to environmental conditions and chemicals
- Maintenance-free
- Pre-centered at the factory
- Design and manufacturing certified after DIN EN 1090-2 EXC 2

Application

The SENSiQ Secure Mount ensures an optimal application of force to Schenck Process SENSiQ Ring-Torsion Load Cells.

They are deployed as bearing units (Secure Mount and Elastomer Mount) in industrial scales such as e.g. bin weighers, hopper scales, tank scales and mixed-mode scales and guarantee reliable and secure weighing.

Equipment

The SENSiQ Secure Mount bearings consist of a load application unit, a fixed limit stop at right angles to the direction of free movement, an adjustable lift-lock and the SENSiQ Elastomer Mount that guarantees horizontal self-centering of the SENSiQ Secure Mount.

Adjustable screws are used to set the tolerance for the lift lock.

The tolerance also can be checked easily in installations with little free space.

The tolerance for the horizontal limit stop does not need to be adjusted.

With respect to the installation height the dimensions are compatible with the predecessor generation of VKN bearings. The installation surface on the supporting structure is considerably smaller.

Function

The weight to be measured is applied to the load cell by means of the pressure piece and transmitted to the elastomer. Depending on the model type its vertical deflection is extremely low and is proportional to the load. Any lateral forces deform the elastomer in a parallel manner. It automatically will center itself as soon as the lateral force ceases.

The horizontal limit stop restricts the freedom of movement of the bearing. The lift lock prevents the entire structure from tipping over. A control arm is not required, which eases considerably the installation and adjustment and helps to prevent errors.

SENSiQ Secure Mount for load cells 0.25 t ... 33 t

Ref.	Model designation

1 Max. height with leveling plates

2 Screws and threads to be used in the connecting structure, for assistance during assembly only

3 Clearance holes (K, I, J) on lower plate and central holes (G) on upper plate are present only for nominal loads of 47 t

4 Midpoint of the load cell

The SENSiQ™ Secure Mount PLUS with maximum permissible horizontal and vertical loads of up to 40 % of the nominal load is available for greater loads of 10 t up to 330 t. Refer to data sheet BV-D2444. Separate measures must be implemented for the horizontal limit stops and the lift lock for loads beyond these specifications.

Important information:

The connecting surfaces for the bearings must be planar and metallically bright. The difference in height in the area of the contact surface may not exceed 0.2 mm. Painted surfaces are not suited for mounting the SENSiQ Secure Mount.

A non-repeatable transmission of force may occur when raising/resetting the load cell load application elements, causing measuring errors in the scales. For this reason the load cell in the SENSiQ Secure Mount may never be completely load-free. The minimum preload should be calculated so that when in operation a permanent friction connection always connects the load cell with the pressure piece or the bearing base plate.

Arrangement of the bearings 0.25 t ... 33 t

Please Strictly Observe!

The bearing arrangements shown take only weighing-related technical factors into consideration.

The operator/plant constructor must check and verify the structural safety and stability.

The direction of the temperature-dependent expansion must correspond to the free direction of movement of the SENSiQ Secure Mount.

SENSiQ Secure Mount 0.25 t ... 33 t generally are bolted to the connecting structure.

Arrangement of the bearings 47 t ... 470 t

Please Strictly Observe!

The bearing arrangements shown take only weighing-related technical factors into consideration.

The operator/plant constructor must check and verify the structural safety and stability.

The direction of the temperature-dependent expansion must correspond to the free direction of movement of the SENSiQ Secure Mount.

For round hoppers the SENSiQ Secure Mount 47 t ... 470 t is designed for a minimum diameter of 3000 mm.

SENSiQ Secure Mount 47 t can be bolted or welded to the connecting structure.

SENSiQ Secure Mount 68 t ... 470 t can be affixed to the connecting structure by weld only.

SENSiQ™ Secure Mount PLUS (SSM PLUS)

Limit Stop Unit for SENSiQ™ Elastomer Mount for Nominal Loads between 10 t ... 330 t

- **Significantly greater stability compared to normal SENSiQ™ Secure Mounts**
- **Absorbs 40 % of the rated load along the horizontal axis and prevents lifting**
- **Legal-for-trade**
- **Design and manufacturing certified after DIN EN 1090-2 EXC 2**
- **Safety without shunt forces**
- **Simple and robust construction**
- **Highly stable against environmental influences and chemicals**
- **Maintenance-free**
- **Pre-centered at the factory**

Application

The SENSiQ Secure Mount PLUS is a limit stop and lift-lock used with the SENSiQ™ Elastomer Mount for increased stability.

It is used for industrial scales such as e.g. bin weighers, hopper scales, tank scales and mixed-mode scales and guarantee reliable and secure weighing.

Equipment

The SENSiQ Secure Mount PLUS consists of a specially reinforced limit stop along a horizontal axis. The structure is freely moveable along the other axis. Furthermore there is a specially reinforced lift lock.

Adjustable screws are used to set the tolerance for the horizontal limit and the lift lock.

The tolerance also can be adjusted and checked easily in installations with little free space.

In order to compensate for differences in height of SENSiQ Elastomer Mounts, they must be combined with weld-on plates.

Function

The horizontal limit stop restricts the freedom of movement of the bearing along a horizontal axis. The lift lock prevents the entire structure from tipping over. A control arm is not required, which eases considerably the installation and adjustment and helps to prevent errors.

SENSiQ™ Pendulum Mount (SPM)

Self-Aligning Mount for Load Cell SENSiQ™ RTN 1 t ... 470 t

- Capable of the highest measuring accuracy
- Legal-for-trade
- Extremely robust (stainless steel)
- Self-centering
- Easy to assemble and maintenance-free

Application

The pendulum mount was designed for perfect interaction with the RTN load cell.

It is used in situations with extremely rough ambient conditions but where a long life cycle and the highest measuring accuracy are required.

Typical applications are vehicle scales and binweighers.

Construction

A complete Pendulum Mount consists of a pendulum pressure piece, a pressure piece and a centering piece of shims for height compensation.

The load cell is located either directly on the connecting structure or on an optional base plate.

The base plate ensures an ideal installation surface if the floor is uneven.

Function

The weight to be measured is applied to the load cell by means of the pressure piece via the pendulum pressure piece.

The pendulum pressure piece prevents disturbance transverse forces from being applied to the load cell.

The self-centering effect of the bearing returns automatically the scales to the home position after each deflection.

Depending on the installation situation the pendulum may require limit stops.

Dimensions

SPM 10 t ... 470 t

SPM 1 t ... 4.7 t

Centering bolt
Ø 25_{h9} x 20

- The pressure piece is secured using a centering piece that is bolted to the connecting structure.
- Height compensation (maximum 5 mm) is performed using leveling shims.
- The load cell is centered using a spigot (Ø 25 mm).
- The optional base plate is centered using a bolt (Ø 25 mm, included in delivery).
- An earthing connection must be provided on the ground plate of the connecting structure (see the planning-in drawings).

Load Cells VBB and Load Cell Mounts VEB

- **Highest accuracies (up to 6000 increments to OIML R60)**
- **Hermetically sealed due to laser welding (IP68)**
- **Use in hazardous zone with protection class
Ex ia IIC T4 Gb / Ex ia IIIC T125 °C Db
or protection class
Ex nA IIC T4 Gc / Ex tb IIIC T125 °C Db**
- **Optimized for parallel connection through perfect calibration**
- **6-wire circuit**
- **100 % stainless steel**

Application

Load cells of the VBB type are designed to convert the mechanical input signal, the load, proportionally into the electrical output voltage.

Combined with the corresponding VEB elastomer mounts, they are very suitable for use with platform, batching, and hopper scales. Their compact design simplifies the integration in any existing construction.

The rugged design of the load cells and mounts ensures reliable operation even in severe environments.

Construction

Entirely made of stainless steel and hermetically sealed by laser welding, the VBB load cells are connected by using a high-quality shielded 6-wire PVC cable.

The 6-wire circuit provides for a measuring signal which is insensitive to connecting cables of different lengths.

Functions

- High calibrating accuracy, thus, optimal prerequisites for the parallel connection of load cells
- High degree of measuring signals repeatability
- Damping of side forces through the elastomer mount
- Self-centering after side load
- Minimal effect on accuracy by side forces

SENSiQ™ Fixed Mount (SFM)

Pivot for load cell applications with nominal loads from 1 t ... 470 t

- Simple, rugged and flat design
- Dimensions compatible to Elastomer Mount SEM and Secure Mount SSM
- Minimal reaction to lateral forces
- Ease of installation
- Stainless steel (SFM 1 t ... 22 t) or S235 (SFM 33 t ... 470 t)
- Design and manufacturing certified after DIN EN 1090-2 EXC 2

Application

Fixed Mount are designed for simple weighing tasks, e.g. hopper level measurement.

Combined with one or two load cells (partial load measurement), the Fixed Mount offer a favourably priced but sufficiently accurate solution, particularly for applications with a defined centre of gravity, e.g. hoppers with liquid contents.

Construction

The Fixed Mount consists of a double T girder reinforced with ribs. The reinforcement ribs ensure a defined bending zone and increase the resistance to lateral forces, so that normally no additional tie-rods are required.

The Fixed Mount of the SFM type is dimensionally compatible with the SEM Elastomer Mounts, so that no height adjustment is necessary when the two types of mount are combined.

The mounts can be adjusted in height with the use of shims by max. 5 mm (SFM 470 shims by max. 10 mm).

When using in combination with the Secure Mount SSM the height adjustment of the SFM is provided via optional compensation plates.

Normally, the SFM mounts are welded to the existing construction. Connecting surfaces without shims can also be screwed on.

Function

The deflection for measurement of load cell and mount causes a restoring force in the bending zone of the Fixed Mount, acting on load cell but being compensated upon calibration. Depending on the point of application, significant weighing errors can be produced through horizontal forces acting vertically to the tilting line. Therefore it is essential that the Fixed Mount be mounted on a common tilting line as shown in the installation drawings.

The load distribution between Fixed Mount and load cells highly depends on the symmetry of the load carrier/hopper and the horizontal forces (wind, pipe connections, agitator), particularly in the case of 4 support points. In contrast to a full load measurement using load cells, these forces have the potential to cause a significantly higher weighing error.

Fixed Mount 1 t ... 470 t

SENSiQ™ Fixed Mount PLUS (SFM PLUS)

Fixed bearing for load cell applications for nominal loads from 10 t ... 330 t

- **Simple and robust construction, even more stable than the normal SENSiQ™ Fixed Mount**
- **Stable against shear forces up to 40 % of the nominal load**
- **Height dimension is compatible with the SENSiQ™ Secure Mount PLUS**
- **Easy to assemble**
- **Design and manufacturing certified after DIN EN 1090-2 EXC 2**
- **Material: S235, painted**

Application

SENSiQ Fixed Mount PLUS is used for uncomplicated weighing tasks, such as e.g. fill level measuring systems.

In combination with one or two load cells (partial-load measurement) this represents a cost-efficient solution sufficiently accurate for many situations.

In particular this applies to applications with a defined center of gravity, such as hoppers with fluid contents.

Equipment

The SENSiQ Fixed Mount PLUS consists of a double T-beam with reinforcing ribs. The reinforcing ribs create a defined bending zone and a greater stability against shear forces so that additional pinning of the hopper or the supporting beam is in many cases no longer required.

The SENSiQ Fixed Mount PLUS are higher than the SENSiQ™ Elastomer Mount so shims will be required if they are used in combination. No compensation is required if used in combination with the SENSiQ Secure Mount PLUS.

Additionally the height of the bearings can be adjusted with the used of shims by up to 5 mm.

The SENSiQ Fixed Mount PLUS are welded directly on both sides to the steel frame construction.

Function

The measuring displacement from the load cell and the load cell bearing generates in the bending zone of the SENSiQ Fixed Mount PLUS a return force that acts on the load cell that can be compensated for during adjustment.

Depending on the point of contact, larger weighing errors can arise due to horizontal forces acting perpendicular to the tilting horizon.

Therefore it is essential that multiple SENSiQ Fixed Mount PLUS must be installed with a common tilting horizon (see the planning-in drawings).

The load distribution between the SENSiQ Fixed Mount PLUS and the load cells depends on the symmetry of the load carriers/hoppers, the location of the bulk material center of gravity and the horizontal forces (wind loads, pipe connections, agitators), in particular if there are 4 supporting points.

As opposed to a full-load measurement using load cells, influencing factors of this kind can cause significantly greater weighing errors.

SENSiQ Fixed Mount PLUS 10 t ... 330 t

Accessories for load cell mount SENSiQ Secure Mount SSM and SENSiQ Elastomer Mount SEM

- Heat insulation plates
- Weld-on plates
- Dimensionally compatible with mounts SSM and SEM
- Heat insulation plates protect the load cells and extend the application range
- Weld-on plates simplify installation
- Can also be used for height leveling

Application

Heat insulation plates prevent heat transfer from a load carrier, e.g. a hot hopper, to the load cells via the mount elements.

In this way, errors of measurements caused by inadmissibly high temperatures or thermal gradients can be prevented.

The load cell's application range is extended.

Weld-on plates simplify installation of the load cell mounts. There is no necessity to make precise fastening borings above and below the mount or to correct them during installation. Weld-on plates can also be used for height leveling, e.g. when retrofitting. Heat insulation and weld-on plates can be combined.

Construction

Heat insulation plates consist of several layers of insulating material which are separated by thin steel plates to improve load distribution. The predefined packs extend the load cells' application temperature range to 150 °C.

Heat insulation plates with different dimensions are also available on request for different ambient conditions.

The weld-on plates are designed thus that they can be combined with both SENSiQ Secure Mount SSM and SENSiQ Elastomer Mount SEM.

Function

The heat insulation plates installed above the mount prevent heat conduction from the load carrier into the load cells via the load reception elements.

On the one hand, inadmissibly high temperatures which might in the worst case cause permanent damage to the load cell are kept away from the load cell and on the other, temperature gradients at the load cell are avoided which may impair accuracy.

Nominal and service temperature ranges of the load cells are thus extended.

Standard variants of heat insulation plates

Example: SSM 1 t ... 4.7 t

Example: SEM 1 t ... 470 t

Technical Data

Type	Material of metal parts	Height	Overall height H + 5	Material number
SEM 1 t ... 4.7 t	1.4301	34	132	D733119.01
SEM 10 t ... 22 t	1.4301	34	164	D733119.02
SEM 33 t	S235, galvanised	34	202	D733119.03
SEM 47 t	S235, galvanised	62	260	V081425.B01
SEM 68 t	S235, galvanised	72	292	V081425.B02
SEM 100 t	S235, galvanised	82	321	V081425.B03
SEM 150 t	S235, galvanised	97	417	V081425.B04
SEM 220 t	S235, galvanised	112	485	V081425.B05
SEM 330 t	S235, galvanised	132	559	V081425.B06
SEM 470 t	S235, galvanised	157	677	V081425.B07
SSM 1 t ... 4.7 t	1.4301	22	138	V020696.B01
SSM 10 t ... 22 t	1.4301	22	172	V020696.B02
SSM 33 t	S235, galvanised	22	214	V020696.B05
SSM 47 t	S235, galvanised	52	305	V024275.B01

Heat insulation plates are as a rule installed above the bearings.

Heat insulation plates for SSM >47 t are available upon request. But then the horizontal load capacity and lifting force is reduced.

Temperature range

- Up to a container temperature of 80 °C, heat insulation plates are not necessary.
- The setup shown with single heat insulation is suitable for temperature of up to 150 °C.
- At higher temperatures special solutions are available upon request.

Notice

Load transmission must be without force bypass over the entire temperature range.

This means: Limit stops and lift-off protection must have sufficient play despite thermal expansion.

Standard variants of the weld-on plates

Technical Data

Type	Material	Height	A	B	C	Material number
SEM / SSM 1 t ... 4.7 t	1.4301	15	140	100	M 12	D733120.06
SEM / SSM 1 t ... 4.7 t	S235, galvanised	15	140	100	M 12	D733120.01
SEM / SSM 10 t ... 22 t	1.4301	20	180	140	M 16	D733120.04
SEM / SSM 10 t ... 22 t	S235, galvanised	20	180	140	M 16	D733120.02
SEM / SSM 33 t	S235, galvanised	25	240	200	M 20	D733120.03

In combination with SSM, the weld-on plates can be used above and below the mount. With elastomer mounts SEM this can only be done in the load area of 1 t ... 4.7 t.

With SEM mounts of 10 t and up, weld-on plates can only be used above the mount; if necessary the elastomer at the bottom is welded directly.

Designs for other nominal loads or with different thickness are available on request.

RoCon[®] Series 6

Electronic Rotational Speed Change Sensor

Introduction

Members of the Schenck Process Group, Stock® are leading providers of feeding, automation and bulk solids handling solutions.

The Schenck Process Group are global market leaders for solutions in measuring and process technologies in industrial weighing, feeding, screening and automation.

Always close to the customer, with an unrivalled global network of operating companies Stock® are your competent global partner for weighing, feeding, screening and automation solutions throughout the process industries.

Our philosophy is based on...

- ◆ Continuous product development
- ◆ Best practice approach to applications
- ◆ Raising industry standards

Capabilities

- ◆ Single machine
- ◆ Multiple machines
- ◆ System solutions
- ◆ Installation & commissioning
- ◆ Plant layout & integration
- ◆ Engineering & contract management
- ◆ Professional customer service approach

Industries

- ◆ Power, Coal, Steel, Cement, Mineral, Chemical, Grain Processing, Brewing/Malting, Flour/Feed, Food, Particle Board, Recycling, Waste Water Treatment

The Schenck Process Group develops, manufactures and markets a full range of solutions, products and turnkey systems on the basis of combining process engineering expertise, reliable components and field-proven technology.

Members of the Schenck Process Group are:

How it Operates

A self-contained sensor is employed to sense blades on a target rotor mounted on the driven shaft.

The unit operates on a digital principle, the response time being inversely proportional to speed, i.e the higher the speed the shorter the response time.

Switching occurs when the frequency of the blades passing the sensor corresponds to the threshold frequency. On dropping below the threshold the sensor de-activates.

Standard Units

Allows a machine to 'run up to speed'. If normal running speed is not achieved within 10 seconds the sensor switching current is interrupted.

Pre-set to activate at the min speed of 0.8 rev/min.

Adjustable on site. (On request, units can be supplied to activate at a specified speed.)

DSEAR/ATEX

The RoCon® Series 6 complies fully with the Dangerous Substances and Explosive Atmospheres Regulations 2002 and the requirements of Category 2 & 3 Equipment.

It is suitable for use in Zone 21 & 22 conditions.

Typical Applications

Rotation / no rotation detection of a shaft

In the event of machine failure the RoCon® provides a control signal to stop and protect the machine. Used within single or multiple machine control systems.

Sequence interlocking at start-up

Ensures each machine in series is running before the preceding machine starts.

Automatic emergency shut down

The emergency stopping of one machine fitted with RoCon® is signalled enabling preceding machines to be stopped so preventing a cumulative breakdown.

Unit Housing and Enclosure

The housing is moulded from corrosion resistant glass reinforced polyester resin. Colour Orange.

Enclosure protection is to IP657 to BSEN 60529 - temperature range -25 to +70°C and complies with temperature class T6 to BS 4683 and IEC 79.8.

Special units for hazardous areas

These units can be supplied for use with the client's approved speed monitor to form an 'Intrinsically Safe System'. The RoCon® details provided within this leaflet Do Not Apply. Call Redler

RoCon® Series 6 Rotational Control Unit

Sensor Design

The RoCon® can be wired into the starter circuit of the control system, or used to give an input directly to a PLC. The sensor provides an open circuit when de-energised operating from a 24 to 240V AC/DC 50 Hz supply. For maximum safe operation wiring into the starter circuit is to be preferred as the RoCon® is still functional if manual operation of the system can bypass the PLC control.

Connection to the sensor is two wire.

Sensor Part Order No. 0048/3048

Approval

Type: M300222B Baseefa03ATEX0674X (C)
 Ex II 1D T100°C Tamb -15 to +50°C IP65 1180

Variations and Optional Extras (a - d)

Without start-up delay

For use with relays, timers and PLC's in automatic control circuits.

Low speed range

Used in conjunction with a ten-bladed sensor target, a selectable speed range of 0.4 to 50 rev/min is available.

Pre-set switching speed units

These units can be supplied to activate at any speed within the range.

- a) Foot mounting bracket
- b) Junction box
- c) Shaft connection guard
- d) Inspection test certificate

Features and Benefits

- ❖ MULTIVOLTAGE Operation
- ❖ Speed range of 0.4 to 720 rev/min
- ❖ The Security and Protection of both machinery and system in the event of a machine failure.
- ❖ Protection to IP657 BSEN 60529
- ❖ Speed change detection unit Detecting - Mechanical failure, Overspeeding, Underspeeding

Sensor Specification

- ❖ **Supply:** 24-240 Volts AC/DC
- ❖ **Fusing:** Supply to be fused at 5A max
- ❖ **Switching Capacity:** 200mA max
- ❖ **Saturation Voltage:** 8 Volts Max. (Output On)
- ❖ **Ambient Temperature:** -15 to +50 °C
- ❖ **Output State:** Normally closed above set speed
Normally open below set speed
- ❖ **Input Pulse Range:** 10-3600 ppm
- ❖ **Maximum Voltage Drop (closed):** 8 Volts
- ❖ **Maximum Leakage Current (open):** 1.6mA
- ❖ **Minimum Switching Current:** 5mA
- ❖ **Hysteresis:** 1% typically
- ❖ **Sensor Enclosure:** ISO threaded 30mm by 1.5 pitch, PET/PEN co-polymer.
- ❖ **Sensor Protection:** IP65 **Relative Humidity:** 90% RH
- ❖ **Red Input LED:** Target sensed
- ❖ **Coloured Output LED:**
- ❖ **Green:** Normal Status
- ❖ **Orange:** Programming not accepted, unit has defaulted back to default setting and requires re- programming.
- ❖ **Red:** Sensor needs re-calibrating, follow recalibration procedure.
- ❖ **Connections:** 2 wire lead. See wiring diagram.

- ❖ Supplied ready to fit
- ❖ Self-contained
- ❖ On-site adjustable speed switching
- ❖ Low cost installation
- ❖ Compatibility with PLC systems

Performing 24/7

**Typical Wiring Diagrams:
Directly Connected into Starter Circuits**

❖ **Standard Units With Time Delay**

The RoCon® is wired in series with the stop push button and when operated the RoCon® conducts for 10 seconds to allow the machine to run up to speed. After 10 seconds the machine rotation maintains the RoCon® in a conducting state. If the machine's speed drops below the switching speed the RoCon® will cease conducting thus releasing the machine starter.

NOTE: The start up delay is initialised when the sensor is powered up from an open circuit condition.

❖ **Units Without Time Delay**

Units are normally used with relays, timers and PLCs in automatic control circuits. Relay connection to the RoCon® will energise when the machine reads the pre-set speed and will release in event of underspeed. RoCon® can also be used to detect overspeed and a typical circuit shown.

WARNING: If the starter coil current is greater than 200mA, an interposing relay **MUST** be used or damage to the sensor will occur

Underspeed Detection

Overspeed Detection

**Typical Wiring Diagrams:
RoCon Units For PLC Applications**

❖ **Start-Up Delay**

Most installations require machines to run up to speed and the standard RoCon® (ref: 045/2080/01) has a 10 second delay to allow for this process. If the delay is to be programmed into the PLC then the version of the RoCon® without an inbuilt delay (ref: 045/2080/11) should be used.

Interfacing with the PLC (and miniature relays)

❖ **AC circuits**

The two wire sensor in the RoCon® is directly applicable to AC input devices and relays provided the 5mA sensor switching current is exceeded and a leakage current of greater than 3mA does not inhibit the OFF state. When leakage current causes a problem a 'Reactive Load Module' can be provided for wiring in parallel with the load. This unit is a Watt-less device that adds to the total load, but generates almost no heat. It is therefore preferable to ballast resistors and can be used where multiple devices are wired in close proximity.

Safety Information

- ❖ The electric cable must NOT be used to retain the rotation of the unit. The aluminium strap must be secured to the back of the unit with the bolt provided, and locked against a suitably secure structure.
- ❖ Any work on electrical parts may only be undertaken by suitably competent person, observing the relevant electrical safety regulations.
- ❖ The fixing bolt into the shaft MUST be tightly fitted. A standard 19mm A/F spanner should be used to tighten the unit onto the shaft.
- ❖ Unit must be installed in accordance with the design drawings of the plant and the installation drawings included with the unit.
- ❖ Do not apply any external loads to the unit when fitted.
- ❖ Injury may result from opening the unit whilst live or whilst in operation.

schenck process

Sensor Adjustment & Recalibration

The sensor start-up delay and speed activation threshold can be adjusted on-site as follows:

- ❖ Start up machine and allow time for it to attain normal running speed.
- ❖ The sensor has two LEDs for information purposes, the input LED is red and flashes every time rotor passes the front face of the sensor. The output LED is tri-colour. Under normal conditions the output LED is green, under fault conditions the LED may be orange or red. See the specification table for fault codes.
- ❖ Whilst the magnet is placed against the target the output LED will flash at one second intervals, as a guide to the time delay. When the magnet is removed, the output LED will again flash at one second intervals, to confirm the start-up delay and at the same time the unit will self-calibrate to 20% under the monitored speed.
- ❖ If zero start-up delay required, allow the machine to reach running speed, then touch the target with the magnet and instantly remove.

Important Safety Information

Caution:

- ❖ **Danger from rotating internal parts**

- ❖ **Danger from electric shock when live.**

These instructions must be read prior to installation of the RoCon[®] unit. Only suitably competent and authorised personnel should attempt to install or maintain this unit.

RoCon control units are an integrated part of the safety concept for the prevention of accidents worked out for our machines and plants.

Shipping / Packing Specification

- ❖ Net weight 1.1kg, gross weight 1.4kg
- ❖ Carton size 210 x 170 x 160mm

FloMaster®

Circular Bin Discharger

- ❖ Fitted beneath circular silos or bins
- ❖ Positive discharge of difficult materials
- ❖ No bridging or blockage at the silo outlet
- ❖ Compact construction
- ❖ Versatile in material control
- ❖ Single, Two or Three Stage units
- ❖ Totally enclosed
- ❖ Safe/good access for maintenance

Other Redler Technologies

IntraBulk®

Bulk Reception Unit

- ❖ Above ground intake
- ❖ Feed from road vehicle or loader
- ❖ Fast vehicle turn around time
- ❖ Can act as a buffer store
- ❖ Controlled discharge into process
- ❖ Modular heavy duty construction
- ❖ Quick installation & commissioning

FulFiller®

Container Loader System

- ❖ Modular portable unit
- ❖ High speed filling of containers
- ❖ Maximises available storage capacity
- ❖ Meets logistics industry criteria
- ❖ Safe/good access for maintenance

MoveMaster®

Conveyors & Elevators

Where industrial processes require materials to be transported horizontally, vertically or up inclines, Redler® select the appropriate equipment based on a careful analysis of each specific set of conditions within the process.

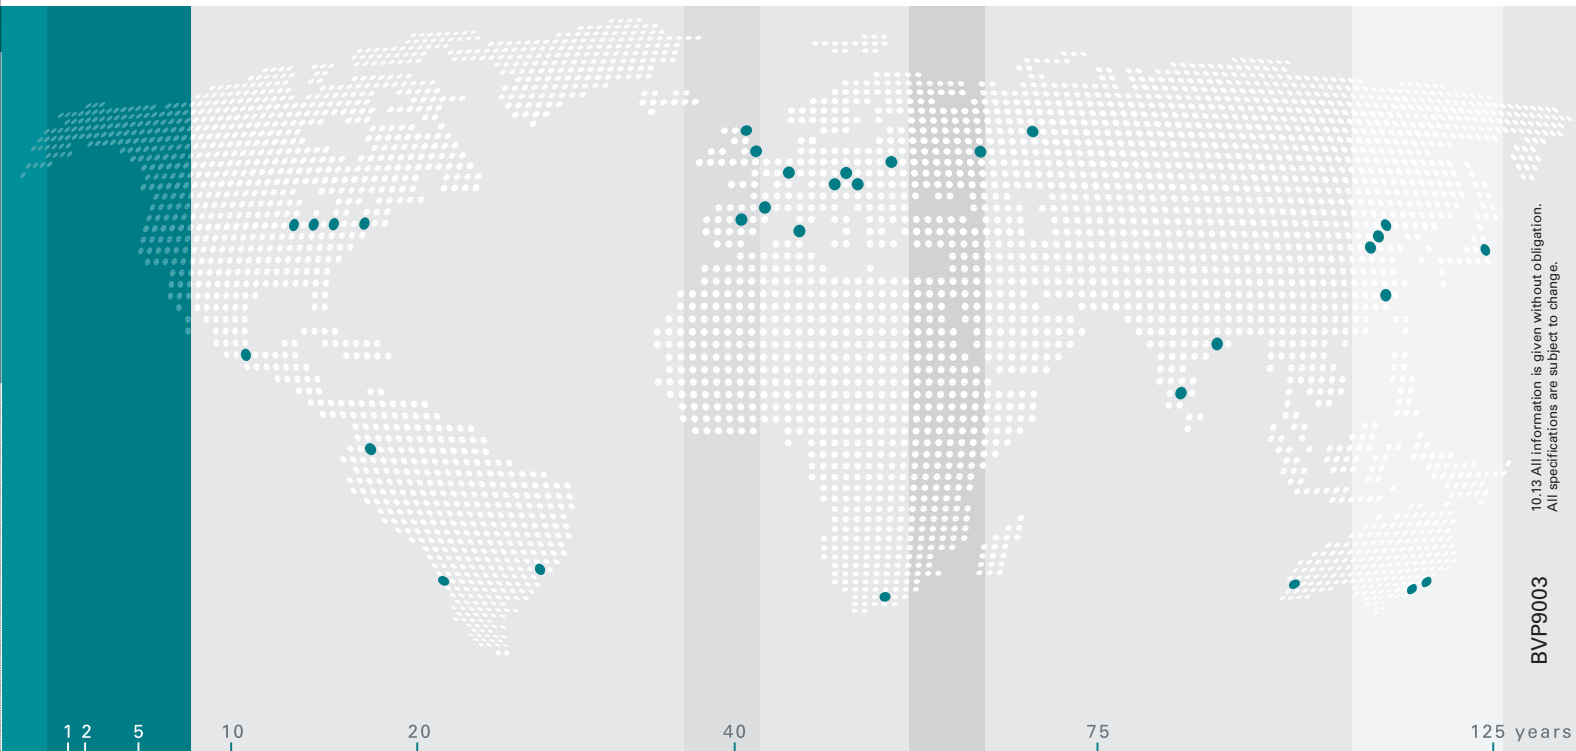

- ❖ Capacities 1-2000 tonnes per hr
- ❖ Worldwide references

PortBulk®

Mobile Reception Hopper

- ❖ Portside applications
- ❖ Grab entry into hopper
- ❖ Integral dust suppression
- ❖ Heavy duty construction
- ❖ Outloading to vehicles
- ❖ Outloading to transfer system

Terminal Boxes Types VAK and VKK for Sensors

- Easy to install
- Different variants for extension or summation of load cell cables
- Suitable for use in hazardous areas and severe environments
- Highly resistant to aggressive media
- Optional overvoltage protection

Application

The **cable boxes**, types VKK 280x1, are designed for extension of the load cell connecting cable.

The **cable summation boxes**, types VKK 280x6, VKK 280x4 and VKK 280x8, are designed for interconnecting the load cells of a scale.

In case of high demands on weighing accuracy, the built-in series resistors can be used for corner adjustment.

Thanks to the plug-in jumpers balancing is especially easy and time saving.

Depending on the application, the **junction boxes** type VAK can be used for mere extension of the load cell connecting cable and other sensor lines, but also for summation of the signals of multiple load cells (without corner adjustment).

Design

The VAK/VKK terminal boxes are made of aluminium diecast, polyester or stainless steel.

For easy mounting within the terminal box, all cable connections are screwed in place or clamped.

Polyester cases are equipped with plastic cable screw connections, aluminium and steel cases are equipped with bronze screw connections - steel ones are available as an option.

Performance

As cable summation box, types VKK 280x4 are available for 4 load cells, types VKK 280x6 for 6 load cells and VKK 280x8 for 8 load cells.

The terminal boxes are universally applicable. For high temperatures or used in explosion hazard environments (up to approx. +100 °C – with use of appropriate cable and special cable glands 150 °C are possible), housings are made of aluminium.

If the terminal box is exposed to aggressive media or mounted in severe environments, polyester housings are preferred.

The stainless steel housings are suitable for both application areas.

Load cells both with 4- and 6-wire cable can be connected.

All terminal boxes VKK are equipped with potential-equalization rail for correct connection of the potential-equalization lines.

All boxes guarantee that the correct cable screen connection has been made.

Terminal boxes for use in explosion hazard areas of category 2G/2D remain available.

MULTIBELT® Single-Idler Belt Weighers

- Continuous bulk solids measurement in belt conveyor systems
- Suitable for flow rates up to 15,000 t/h
- Accuracy up to $\pm 0.5\%$
- Also legal-for-trade-version
- Simple and quick installation
- Type BEM – designed modularly, suitable for any belt width
- Types BEP/BED – weighing platforms, suitable for IEC belt widths
- Suitable for use in ATEX explosion-zones

Application

Single-Idler Belt Weighers are used for continuous acquisition of flow rates and totalized amounts. They are especially designed for integration into continuously operating belt conveyors enabling accuracies of up to $\pm 0.5\%$ to be achieved. They can be employed for a whole variety of tasks:

- Throughput and consumption measurement in production plants
- Accountability of stored and retrieved amounts
- Load limit alarm
- Batching, in load-out stations
- Legal-for-trade weighing
- Prefeeder control.

Their rugged design ensures a high-degree of reliability and availability.

We have the right Belt Weigher for every Belt Conveyor. For Multi-Idler Belt Weighers designed for higher accuracies, see separate Spec Sheet BV-D2050.

Construction

The standard single-idler belt weigher comprises:

- Weighing module or platform for accommodating user's idler set
- Overload-protected load cell(s) with high degree of protection
- Cable junction box for connection of sensors, and
- All fixing elements required for mounting.

For speed measurement, various speed transducers e.g. friction wheel tachometers, are available as options.

Operating Principle

Belt Weighers are used to measure continuous material flows of varying amounts.

Load cells acquire the weight of load on particular belt sections. A speed transducer measures the belt speed.

The product of these two variables is the current flow rate. Integration of flow rate determines the totalized amount of material.

If belt weighers are not equipped with speed measurement system, belt speed is not acquired. In the secases, weighing electronics use the constant speed value set by parameter.

However, this method can adversely affect the accuracy.

Technical Data

MULTIBELT Single-Idler Belt Weighers	Accuracy without speed measurement system only achievable at constant speed	Flow rate	Weight	Belt Speed	Belt Rise
BEM	±1,0 % of nominal flow rate	to ca. 4.000 t/h	≈ 60 kg	to ca. 6 m/s	~ 20° (No relative material movement)
BEP	±0,5 % of nominal flow rate	to ca. 6.000 t/h	≈ 100 kg		
	±1,0 % of actual flow rate				
BED	±0,5 % of nominal flow rate	to ca. 15.000 t/h	≈ 300 kg		
	±1,0 % of actual flow rate				

Accuracy

Specified accuracies refer either to nominal (maximum) flow rate or to the corresponding actual flow rate in the range of 20 to 100 %.

Specified accuracies assume that the variant is installed in a suitable belt conveyor and that the measuring station is installed and calibrated in accordance with our installation and calibration instructions.

For optimum planning-in of your belt weigher(s), see Spec Sheet BVR2220 'Recommendations for ensure proper functioning and high accuracy'.

Special Requirements

Should you have special requirements, e.g.

- Legal-for-trade variants
- Belt speed out of specified range
- Meter for varying belt angle
- Prefeeder control
- Flow rates exceeding 15,000 t/h
- Higher accuracies
- Special belt widths
- Special belt conveyors, please let us know.

Ordering Data

For us to be able to handle your order smoothly and quickly, please let us have the data below in addition to the ordering number:

- Belt width [mm]
- Flow rate [t/h]
- Belt rise [°]
- Belt speed [m/s]
- Accuracy [%]
- Nominal flow rate ()
- Actual flow rate ()

Single-Idler Belt Weigher Variants
BEM 400 - 1400 Belt weigher of modular design, belt widths from 400 - 1400 mm
BEP 400 - 1400 Belt weigher with weighing platform, IEC-belt widths from 400 - 1400 mm
BED 1600 - 2000 Belt weigher with weighing platform, IEC-belt widths from 1600 - 2000 mm

Options
FGA 24 A – Speed measurement system, Namur switch with perforated disc
FGA 20 RSLE - Speed measurement system for belt speeds up to 3.5 m/s; friction wheel with rocker and support
FGA 30 R2 - Speed measurement system for belt speeds up to 3.5 m/s; friction wheel, enclosed casing, rocker and support
FGA 30 R2 K - Speed measurement system for belt speeds from 3.5 m/s onward, with coupling for connection to shaft end
FGA 53 K - Speed measurement system for belt speeds from 0.1 m/s onward, with coupling for connection to shaft end

MULTIBELT® Multi-Idler Belt Weighers

- Continuous bulk solids measurement in belt conveyor systems
- Suitable for flow rates up to 20,000 t/h
- Accuracy up to $\pm 0.25\%$
- Also legal-for-trade-version
- Suitable for IEC belt widths
- Suitable for use in ATEX explosion-zones

Application

Multi-Idler Belt Weighers are used for continuous acquisition of flow rates and totalized amounts. They are especially designed for integration into continuously operating belt conveyors and enable accuracies of up to $\pm 0.25\%$ to be achieved. They can be employed for a whole variety of tasks:

- Throughput and consumption measurement in production plants
- Accountability of stored and retrieved amounts
- Load limit alarm
- Batching, in load-out stations
- Legal-for-trade weighing
- Prefeeder control.

Their rugged design ensures a high degree of reliability and availability.

Our product range is as varied as the demands of our customers. For Single-Idler Belt Weighers, see separate Spec Sheet BV-D 2049.

Construction

The standard Multi-Idler belt weigher comprises:

- Weighing platform for accommodating user's idler sets
- Overload-protected load cell(s) with high degree of protection
- Cable junction box for connection of sensors, and
- All fixing elements required for mounting.

For speed measurement, various speed transducers e.g. friction wheel tachometers, are available as options.

Operating Principle

Belt Weighers are used to acquire continuous material flows of varying amounts.

Load cells acquire the weight of load on particular belt sections.

The longer the belt section is, the less the measuring result is affected by external influences.

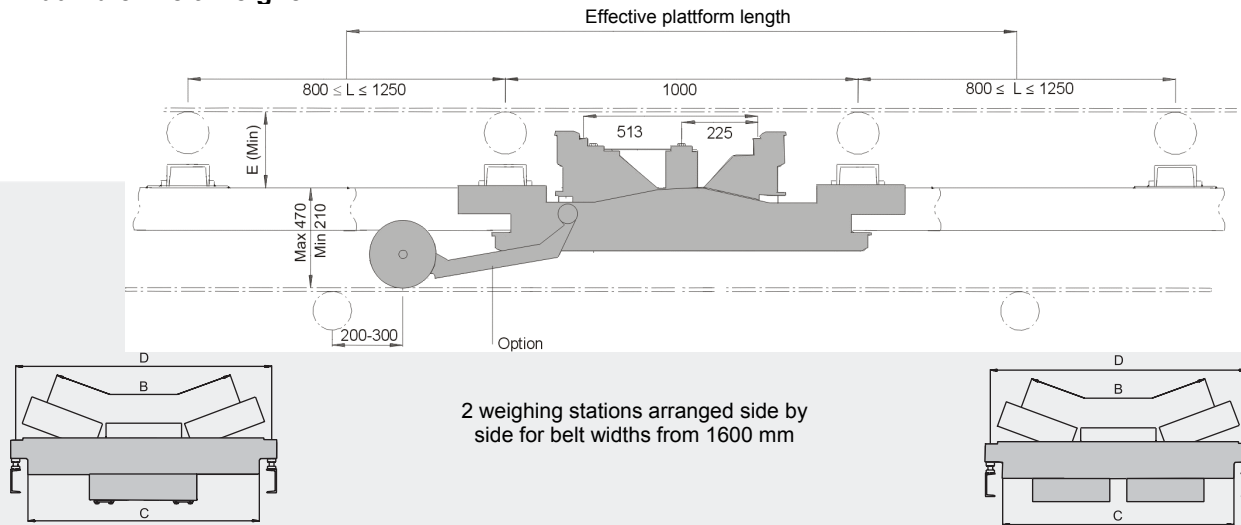

In addition to belt load acquired by load cells, belt speed is measured by a speed transducer.

The product of these two variables is the current flow rate.

Integration of flow rate determines the totalized amount of material

BMC 500 - 2000 Belt weigher with weighing platform, IEC belt widths from 500 to 2000 mm

Options
FGA 24 A – Speed measurement system, Namur switch with perforated disc
FGA 20 RSLE - Speed measurement system; friction wheel with rocker and support
FGA 20 RSLE-VA - Speed measurement system for belt speeds up to 3.5 m/s; friction wheel with rocker and support in stainless steel design
FGA 30 R2 - Speed measurement system for belt speeds up to 3.5 m/s; friction wheel, enclosed casing, rocker and support
FGA 53 K - Speed measurement system for belt speeds from 3.5 m/s onward, with coupling for connection to shaft end

Speed Sensor FGA 20RSLE

- **Cost-efficient integration**
- **High reliability**
- **Maintenance-free storage and sealings**
- **Easy handling**
- **Completely made of galvanized steel or stainless steel**
- **Legal-for-trade variant for MULTIBELT®-type belt weighers**
- **ATEX optional category 2GD (zones 21, 22, 1 or 2)**

Application

The FGA 20RSLE speed sensors are designed for measuring the belt speed of belt conveyor systems.

They are used as optional equipment for MULTIBELT®-type belt weighers.

A customized speed sensor can be used in ATEX zones 21, 22, 1 or 2.

Design

The speed sensor consists of a rocker that can be pivoted around an axis. The axis is mounted in a bracket that is attached to the machine (belt conveyor) to be monitored. The measuring wheel is attached to this rocker and runs slip-free on the belt to be measured. The belt speed is measured as a frequency signal through windows in the measuring wheel and with one or two (legal-for-trade) proximity sensor/s and processed using an evaluation device.

The FGA 20RSLE speed sensor is manufactured entirely of a highly corrosion-resistant galvanized steel and in the ATEX – certified model made of 1.4301 stainless steel.

Function

The pulse wheel runs on the interior of the empty, returning belt of a belt feeder system with a rubber ring. Under its own weight, the wheel is friction-locked against the belt and is made to rotate by the belt movement. The non-slip motion means that the wheel circumferential velocity corresponds to the belt speed.

The rotational speed of the wheel is registered by a sensor that records the speed by means of transmitting a signal through an alternating series of windows and bars, recording a frequency that corresponds to the belt speed of the belt conveyor system. This frequency is transmitted to the evaluation electronics where it is analyzed.

Dimensions [mm]

Operating temperature	-20 °C ... +50 °C
Operating temperature, ATEX	-20 °C ... +50 °C
Belt speed	< 3.5 m/s
Pulses	20 pulses per revolution = 33.5 pulses per meter of belt
Output signal	Namur
Weight	4.55 kg
Legal-for-trade type	2 proximity sensors
ATEX (option)	Zone 21, 22, 1 or 2

Speed Sensor FGA 30R2

- High degree of reliability
- Robust design
- Maintenance-free storage and seals
- Made completely from steel
- Legal-for-trade variant for MULTIBELT-type belt weighers
- Designed for operation with friction wheel and rocker
- Drive system with coupling available
- Successor to the FGA 30R with identical connection dimensions
- ATEX optional category 2GD (Zone 21, 22, 1 or 2)

Application

FGA 30R2 speed sensors are designed for measuring the belt speed of belt conveyor systems. They are used as optional equipment for MULTIBELT®-type belt weighers. A customized speed sensor can be used in ATEX zones 21, 22, 1 or 2.

Equipment

The speed sensor consists of a housing with an internal impulse wheel mounted on a drive shaft. The angular velocity of the shaft is measured as a frequency signal through windows in the measuring wheel and with one or two (legal-for-trade) proximity sensor/s and processed using an evaluation device. The FGA 30R2 speed sensor is made entirely of steel with a powder-coated surface. The FGA 30R2 can be fitted with a rocker and a friction wheel for use as a friction wheel speedometer for registering the speed of the returning belt. Alternatively, with a coupling the FGA 30R2 can be run by e.g. the tail pulley of a belt feeder system.

Function

If operated as a friction wheel speedometer:
The friction wheel runs on the interior of the empty, returning belt of a belt feeder system with a rubber ring. Under its own weight, the wheel is friction-locked against the belt and is made to rotate by the belt movement. The non-slip motion means that the wheel circumferential velocity corresponds to the belt speed. The rotational speed of the wheel is registered by a sensor that records the speed by means of transmitting a signal through an alternating series of windows and bars, recording a frequency that corresponds to the belt speed of the belt feeder system. This frequency is transmitted to the evaluation electronics where it is analyzed.

Dimensions [mm]

Operational temperature	-25 °C ... +60 °C
Operational temperature, ATEX	-25 °C ... +60 °C
Belt speed	< 5 m/s
Max. rotational speed	3000 min ⁻¹
Pulses	30 Pulses/revolution
Output signal	Namur
Weight	3,2 kg
Standard design	1 Proximity sensor
Legal for trade design	2 Proximity sensors
ATEX (option)	Zone 21, 22, 1 or 2

Correction system for Scales with variable Weigher Inclination

- Suited for any scales such as belt weighers
- Inclination correction: to $\pm 29^\circ$
- Robust structure, IP65

Application

The inclination correction system VME 28061 is used for correcting the measuring signal of a weighing unit if the inclination is variable. It is preferred for use with belt weighers.

Structure

The device measures the inclination electronically and in accordance with the inclination corrects the signal of the load cell. It is installed in an IP65 enclosure. The device is mounted at a location with the same inclination as the scale to be corrected. The system is roughly aligned at the scale. Fine tuning is done electronically.

Function

An inclined scale only measures a weight of the mass to be measured that is reduced by the cosine of the angle. The VME 28061 corrects this fault on the electrical output of a strain gauge load cell. The correct functions are not depending upon the load cell model and number nor the design of the electronic measuring unit as long as the electronic supplies the load cell with max. 12 V.

Uncorrected readings of inclined scales

Inclination	Reading error
2,5°	-0,1 %
5,0°	-0,4 %
10,0°	-1,5 %
15,0°	-3,4 %
20,0°	-6,0 %

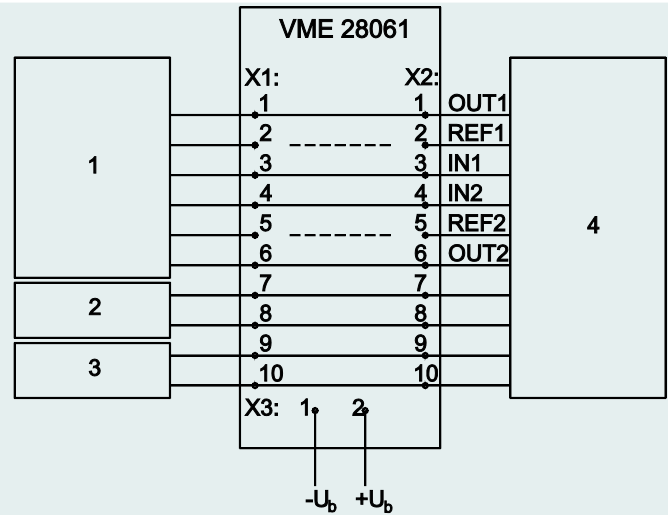

Note:
If the scale inclines with no corrective mechanism this will falsify the dead load measurement. This also will cause absolute measuring errors when determining the payload.

Technical Specifications

Inclination range	-29° ... +29° from the horizontal in exactly one plane of inclination
Residual correction error in the operating temperature range	<0.05 % of the load cell measured reading
Power supply	18 ... 36 VDC (isolation is realised in the VME 28061)
Load cell supply voltage	12 Vpp AC or DC max.
Operating temperature range	-25 °C ... +60 °C Avoid direct sunlight
Storage temperature range	-40 °C ... +80 °C
Signal wire cable cross-section	Max. 1.5 mm ²
Supply voltage cable cross-section	Max. 2.5 mm ²
Protection class	IP65
Dimensions W x H x D [mm] (cable inlets not considered)	122 x 120 x 90
Weight	1500 g
Approbation	CE

Recommendations for the Installation Planning of Belt Weighers

10 rules to ensure proper functioning and high accuracy

Strict observation of the following rules is essential with a view to minimizing factors which might adversely affect the functioning and measuring accuracy of the belt weigher, and which originate from the weigher environment.

For maximum accuracy (related to the actual value), rules 4, 5 and 9 are of particular importance. The measuring stations themselves are of rugged design, and resistant to torsion.

Detailed instructions for installation and alignment are given in our installation, calibration and commissioning instructions

1

Install the belt weigher in a straight belt section

The adjacent illustrations show a number of typical locations of belt weighers for different conveyor belt arrangements.

The numbers in the circles represent a rating scale (from 1 = to be preferred to 6 = unfavourable), characterizing the influence of the place of installation on the accuracy of the belt weigher.

Horizontal belt conveyor

Rising belt conveyor

Belt conveyor with curved belt

2

The angle of inclination of the belt must be such that there is **no relative movement of the material handled**.

3

Install the belt weigher sufficiently far away from the hopper to ensure that the bulk solids flow has settled and there is no relative movement of the material.

4

Observe minimum distance of the belt weigher from the belt drum in the troughed belt.

L_Y = troughing or flattening-out

L_S = safety distance

L_M = weigh length

Rules:

For 3-section idler sets $L_S = 2.5 \times L_Y$

for V-shaped conveyors $L_S = 4 \times L_Y$

5

Accuracy is influenced by troughing.

6

Ensure that the weigher is fully and constantly troughed in the weigher influential zone (3 approach and 3 retreat idlers)..

0 bis 20° GOOD
up to 30° ADEQUATE
up to 45° SUITABLE for measuring accuracies of $\pm 1\%$ and $\pm 2\%$ relative to the nominal feed rate

SUITABLE for measuring accuracies of $\pm 1\%$ and $\pm 2\%$ relative to the nominal feed rate

7

Accurately align all idler sets the weigher influential zone. Idler sets with offset idlers (as seen from above) may affect measuring accuracy. Carrying idlers out-of-round is max. 0.2 mm..

8

Belt stringers in the weigher influential zone must be stable, and the foundation must be firm and safe from sinking.

9

A weight take-up unit must be provided.

10

Take suitable precautions to protect the equipment against wind, moisture and extreme variations of temperature.

Please note:

- The accuracies specified by us are only valid if the weighers are serviced, maintained, and calibrated as instructed, and installed in accordance with these recommendations for the installation planning of belt weighers.
- In the case of legal-for-trade belt weighers, the pertinent local weights and measures regulations must also be observed.
- The accuracy of belt weighers without speed transducer (without v-measurement) varies as a function of the fluctuation in belt speed.
- Proof of accuracy is obtained by performing check measurements with material.
- The quantity used in the measurement must be at least 10 % of the hourly totalized quantity at nominal feed rate (I_{nom}), and one belt circuit must have been completed.
- Before installation of belt weighers, check to see that site can easily be accessed.

The Right Belt Weigher for Every Belt Conveyor

Single-idler belt weigher type BEM

Achievable accuracy: $\pm 1\%$
 Maximum feed rate: approx. 4.000 t/h
 Range of belt widths: 400 – 1.400 mm

Single-idler belt weigher type BED

Achievable accuracy: $\pm 0,5\%$
 Maximum feed rate: approx. 15.000 t/h
 Range of belt widths: 1.600 – 2.000 mm

Multi-idler belt weigher type BMP

Achievable accuracy: $\pm 0,25\%$
 Maximum feed rate: approx. 15.000 t/h
 Range of belt widths: 500 – 2.000 mm

Single-idler belt weigher type BEP

Achievable accuracy: $\pm 0,5\%$
 Maximum feed rate: approx. 6.000 t/h
 Range of belt widths: 400 – 1.400 mm

Multi-idler belt weigher type BMC

Achievable accuracy: $\pm 0,25\%$
 Maximum feed rate: approx. 20.000 t/h
 Range of belt widths: 500 – 2.000 mm

Higher belt widths available upon request

Platform scales DVC/DVM

- Flat design
- Robust and maintenance free
- High quality processing
- Extensive range of accessories
- Legal-for-trade as commercial scale Cl. III
- Optional in Ex design

Applications

The DVM line of platform scales has a flat, robust and low-maintenance construction so that they are suited for use in virtually all industrial areas.

The DVC line has more complex engineering meaning it offers a wider spectrum of designs and accessories.

The high quality design of the scales (optional up to 1.4404 (316L) electropolished), the easy accessibility for cleaning (removable load plate) and the extensive range of accessories also allow use in challenging applications, such as in chemistry and food production.

Model

- 10 sizes from 400 x 300 mm to 2000 x 1500 mm
- Removable load plate – for series DVC
- Material 1.0038 powder-coated (middle gray, RAL 7040) or 1.4307 (304L)
up to size 800 x 600 mm load plate as standard 1.4307 (304L)
- Optional load plate 1.4404 (316L) (DVC)
electropolished roughness <3 µm
- Optional complete scale in 1.4404 (316L) (DVC)
electropolished, roughness <3 µm
- Pitless scale with 4 adjustable feet

- Optional foundation frame for floor installation of the scale
- Legal-for-trade model for 3000 d or multi-range 2 x 3000 d
- Hazardous area variants (DVC) for:
 - Gas Zone 1 (according to ATEX) in protection class Ex-i
 - Gas Zone 2 (ATEX)
 - Dust Zone 21 and 22 (ATEX)
- Extensive range of accessories, e.g.:
 - Load plate made from bulb plate
 - Roller conveyor
 - Spherical load plate
 - Access ramps
 - Steel benches
 - Floor fixing

We are happy to offer you other special models as requested.

Of course, upon request we are happy to configure a complete scale for you, comprising a DVC/DVM platform scale, DISOMAT® control electronics and other accessories, such as printers, displays, ...

Available combinations of size and nominal load of the scale

Foundation Frame

Suitable foundation frames are available for in-floor installation of the DVC scales. These frames have the job of perfectly bordering the edge of the foundation pit. The frames for the DVC line also provide centering and metallic mounting surfaces for the adjustment bases of this platform scale.

That reduces the demands made of evenness and strength of the pit floor.

The foundation frame is inserted into the already-prepared pit and the remaining gap is filled with concrete. For further details, the installation instructions in the Service Manual BV-H2224

Dimensions of the construction site foundations

Note: The dimensions [mm] H, G (drainage) and E, F (cable feed) are recommended dimensions and can be varied as required.

DPW Pallet Scales

- **Low access height for Hand-Pallet-Truck**
- **Robust and Maintenance-Free**
- **High Quality Manufacture**
- **Available in AISI 316Ti Stainless steel**
- **Extensive Range of Accessories**
- **Legal-for-Trade as a Class III Trade Scales**
- **Also Available as an ATEX Design**

Applications

The robust and maintenance-free design of DPW Pallet Scales makes them suitable for applications in almost all areas of industry.

Paired with the appropriate scales electronics from the DISOMAT family they can also be used as a self-acting scales for automatic gravimetric filling of big bags.

The high-quality design of the scales, the easy access for cleaning and the extensive range of accessories also allow them to be used in exacting applications such as the chemicals industry and for the manufacture of foodstuffs.

Design

- **2 Sizes:** 1080 mm x 1250 mm and 1350 mm x 1250 mm
- **Material:**
 - Powder-coated steel 37 (as per DIN 4753, RAL 7040 medium grey),
 - Stainless steel 1.4301 (AISI 304),
 - Stainless steel 1.4571 (AISI 316Ti).
- **Legal-for-Trade design** for 3000d or multi-range 2 x 3000d
- **Optional explosion hazard design** for explosion hazard zone combinations
 - ATEX Zone 1 and 21
 - ATEX Zone 2 and 22

- The DPW Pallet Scales use the robust, tried-and-tested RTN load cells.

Big bag filling stations can be simply constructed on top of the pallet scales.

We are happy to offer further special designs that meet your particular demands.

And of course we can create a complete scales system for you consisting of a DPW Pallet Scales, DISOMAT® control and evaluation electronics and further accessories such as a printer, display, etc...

Technical Specifications

Load-carrying capacity: max. 2 000 kg
 Possible Weighing ranges:

- 4 – 600 kg / 0.2 kg
- or 10 – 1 500 kg / 0.5 kg
- or 20 – 2 000 kg / 1 kg
- or multi-range or multi-interval scales

DPW Pallet Scales are available in two sizes

Size	I	II
Placement area	1 080 x 1 250 mm	1 350 x 1 250 mm
for pallets	800 x 600 mm	1 200 x 1 000 mm
	1 000 x 800 mm	1 200 x 1 200 mm
	1 200 x 800 mm	
A	620	740
B	1080	1350
C	1480	1750

Material: St37, Stainless steel AISI 304 1.4301 – AISI 316Ti 1.4571
 Weight: approx. 250 kg

2 sizes with respect to the drive-in width

INTECONT® Satus, Indicator for Beltscales

- Clear text operator guidance on back lighting LCD display
- Stainless steel housing – at a high protection class
- Table-top or wall mounting
- Various fieldbuses
- Ethernet interface, can also be used for configuration
- All components can be exchanged without recalibration

Application

The indicator INTECONT Satus is designed for applications using stand-alone belt weigher MULTIBELT® with on-site electronics.

By focusing primarily on the necessities the INTECONT Satus represents a very attractive, simple and modern device on the market.

Equipment and functionality

The indicator for beltscales INTECONT Satus VKG 20790 has a standard stainless steel console shaped case in protection class IP65 that is suited for table-top and wall mounting.

The indicator has an easily readable back lighting LCD display for showing measured values with clear text operator guidance. Data is keyed in via flexible membrane keyboard with 6 keys.

All INTECONT Satus parameters can be configured very easy by using the PC program EasyServe.

The parameters are stored using the load cell dongle technology and therefore are available even after replacement of the main board.

Since Ethernet is increasingly becoming the communication standard even in industry, INTECONT Satus has a standard 10/100 Mbaud network connection. Also the well-established Modbus.

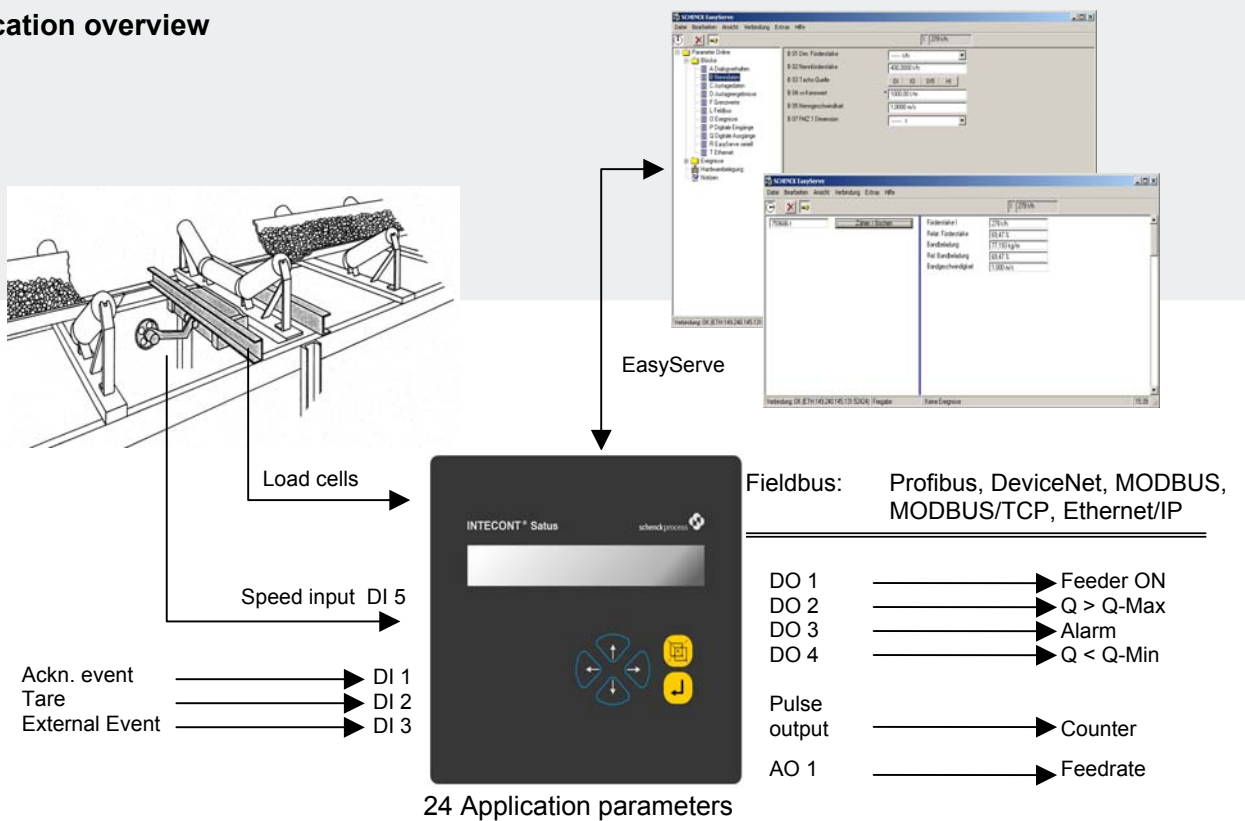

Optional fieldbus protocols for Profibus DP-V0, DeviceNet, Ethernet MODBUS/TCP and Ethernet/IP are available.

Belt weigher application

- On site assembly possible
- Simple and easy commissioning
- Automatic measuring of bulk solids flow
- Totalizing counter
- Belt load monitoring
- Zero-drop-out (no totalizing if belt load is too low, empty belt)

Application overview

INTECONT Satus

- Stainless steel housing with a high protection class
- All connections are tied up to special functions
- All components can be exchanged without reverification
- Functionality self explaining: simple and easy commissioning
- Minimized complexity: only necessary parameters have to be adapted
- 6 keys sufficient for data input and control
- Preloaded menu languages: German, English, French, Spanish, Italian
- PC-based service program EasyServe; to be connected serial or via Ethernet
- Serial connections on board: MODBUS; Ethernet with MODBUS/TCP protocol
- Optional fieldbus protocols: Profibus DP-V0; DeviceNet; Ethernet with protocol Ethernet/IP

INTECONT® Tersus

Mass flow rate measurement

- Maximum reliability
- Legal-for-trade ability accuracy
- Automated commissioning and adjustment
- Cost-effective compact system

Application

The INTECONT® Tersus control electronics are used specifically in technical weighing tasks in continuous process sequences.

It is conceived for recording highly accurate bulk solids flows.

Application

- MULTIBELT® belt weighers (also able for legal-for-trade)
- MULTISTREAM® solids flow meters
- MULTICOR® coriolis mass flow meters

Custom models are for applications in explosion hazard areas.

The control electronics is primarily for cases where the operator needs convenient and comprehensive display, control and monitoring functions in the electronics themselves - in addition to the basic technical measuring functions.

Proven industrial quality guarantees a long lifetime and high levels of accuracy.

Equipment

The electronics are supplied as a front-of-panel unit or with a wall-mounted housing for installation on site. The controls are

operated using ergonomic menus – divided into operation and service functions. Measured values and additional information are available from the colored LCD display.

Fitted with the corresponding communication module, the INTECONT® Tersus connects optimally via fieldbuses to automation structures. The Ethernet network connection is included in the standard features.

Function

The functions of the INTECONT® Tersus differ depending on the scale type. However, the standard features are always the same:

- Device accuracy for weighing tasks better than 0.05 %
- Manual and/or automatic zeroing
- Rough/fine controls for precise backlash
- High electromagnetic compatibility
- Galvanically separated exits
- Feed quantity impulses
- Power fail safe data storage device
- Integrated diagnostic and self-test functions
- Dialog language in German, English, Italian, Spanish and French or other loadable languages, including Chinese or Russian (Cyrillic)

- Factory settings for easy, quick connection
- Automatic adjustment programs, self-starting taring
- Maintenance-interval input with signalisation
- Status, event, adjustment and quantity protocols
- Simulation operation for test and learning purposes possible

Scale-specific functions

The actual feedrate is calculated corresponding to the mechanics used:

- Belt load and belt speed for belt weighers
- Reaction force for solids flow meters
- Direct mass current measurement using coriolis force for mass flow meters

Alongside the extensive standard features, the following scale-specific characteristic features are realized:

- Belt weighers
 - Precise belt speed measurement
 - Belt influence compensation (BIC)
 - Monitoring of the belt creep and belt loop creep
 - Movement of the weighing at the discharge point
 - Legal-for-trade ability Eichfähigkeit (please request separately)
- Solids flow meters
 - Adjustment to different measuring chute characteristic curves
- Coriolis mass flow meters
 - Precise rotational speed and torque measurement

Technical data

Display	LCD graphic display with adjustable brightness
Keyboard	22 buttons
Supply voltage	24 VDC +50 % / -25 %, max. 20 VA
Temperature range	Operation temperature: Standard device: -25 °C ... +60 °C Able for legal-for-trade and ATEX device: -20 °C ... +40 °C Storage temperature (all devices): -40 °C ... +80 °C
Scales connection	Power supply: 12 V alternating voltage Load cell impedance: $R_{min.}$ 80 Ω Cable length: max. 1000 m
Housing	Operating panel rack model IP54, optional bracket for IP65 Protect keyboard and display against longer, direct sunlight.
Binary inputs	5 x optocouplers 18 ... 36 VDC, type 5 mA 1 x NAMUR and 1 x NAMUR/voltage 0.04 ... 3,000 Hz
Binary outputs	8 x relays, max. 230 V, 8 A ohm / 1 A inductive
Impulse output	1 optocoupler for totalizing counter 24 V, 0.1 A, max. 10 Hz
Analog outputs	2 x 0(4) ... 20 mA, load max. 500 Ω , galvanically isolated
Analog input	Current 0(4) ... 20 mA, input impedance 100 Ω , galvanically separated, or voltage 0 ... 10 V
Serial interfaces	Interface 1: EasyServe / Interface 2: Printer / Interface 3: Large display
Power supply VNT0650 internal (optional)	85 ... 264 VAC / 24 VDC
Fieldbus (optional)	Can be selected from: Modbus-RTU, PROFIBUS DP, DeviceNet, Modbus-TCP, EtherNet/IP, PROFINET IO
Analog signal card (optional) VEA0451	2 Analog outputs 0(4) ... 20 mA, load max. 500 Ω , galvanically isolated, common potential 2 analog inputs 0(4) ... 20 mA, input impedance 100 Ω galvanically isolated, common potential
ATEX	Optional approval for use in explosive atmosphere (zone 22) at front

Front-of-panel unit

DISOCONT[®] Tersus Measurement, Control and Supervisory System

- Tailored by modules as needed
- Product line for MechaTronic scales; a synthesis of mechanics, electrics and software
- Installation close to feeder in field enclosure or in control cabinet
- Reduced engineering planning and wiring costs
- Commissioning and diagnostics supported by graphics
- Optimal communication structures because of modular fieldbus technology
- Wireless access for service

Application

DISOCONT Tersus is a system in modular design for controlling of continuous weighing and feeding applications. It is used wherever bulk solids flow has to be measured, fed or batched with the use of

- Loss-in-weight feeders (measuring/feeding)
- Weighfeeders
- Mass flow meters and feeders
- Solids flow meters and feeders
- Belt weighers
- Screw feeder
- Weighing hoppers

The DISOCONT Tersus - electronics are preferably integrated locally into the scale mechanics. So self-contained function units will be created - the MechaTronic scales - which offers numerous advantages:

- Reduced engineering because of minimal number of interfaces; only one unit has to be planned in
- No control cubicle
- Reduced cabling; only power and data cables have to be run

- At a glance - easy service because of the combination of mechanics and electronics

For special applications the DISOCONT Tersus-electronics may be conventionally installed in a control cubicle. Via the Ethernet interface included in the standard or equipped with a suitable fieldbus interface DISOCONT Tersus fits optimal into automation structures in the plant.

Equipment

The DISOCONT Tersus electronics consist of a system unit VCU and multiple optional expansion units. Its modular design enables the requisite units to be combined for a specific application, at a most cost effective price.

- Central unit VCU for all measurement and control functions with interface to operator panels and extension units
- EasyServe-PC-program for commissioning and service

- Fieldbus communication modules plugged into system unit for transfer of all relevant data to the user's control and scale control system
- Additional VCU-unit for conventional connection to user's control system and expanded control of the scale environment
- Operator panel with graphical display and touch for operation of the scale and/or parameterization
- Integrated web server for service access
- Group control unit-operation, survey and control of scale groups, as shown in separate spec sheet
- Access via LAN, WLAN and Bluetooth

The internal DISOCONT Tersus communication bus permits a flexible arrangement of the units, locally or in cabinets. All modules can be replaced with no need for recalibration and re-configuration.

The System includes housing options for installation at site and in control cubicles.

Technical features for all weighing and feeding systems

- System accuracy for scales better than 0,05 % (DIN EN 61143-1); Resolution of the weight signal: 24 million parts
- galvanically isolated inputs/ outputs
- power fail save data storage
- factory presettings for easy and quick commissioning
- various languages loadable/ transferrable
- status, event, calibration, and batch reports
- Batch control with adaptive cut-off curve
- Integrated diagnostics and self testing functions (SPC)
- Simulation mode for testing and learning

Functions

DISOCONT Tersus is designed to acquire the actual feed rate [kg/h, t/h] via

- belt load and belt speed for belt weighers MULTIBELT
- changes in weight of material in weigh hopper per unit of time for loss-in-weight feeders
- reactive force for solids flow meters MULTISTREAM
- direct mass flow measurement using the Coriolis force for mass flow meters MULTICOR
- the load of the feeding screw with automatic calibration via a check hopper for screw feeders type MultiFlex

With **feeding** applications, the control deviation is acquired by feed rate set/actual comparison. Depending on type of scale, DISOCONT Tersus routes a control signal to

- speed-controlled weighfeeder drive or the drive of the feed helix
- controllable loss-in-weight feeder discharge unit
- controllable solids and mass flow feeders' prefeeders

The control circuit exactly controls the actual feed rate for conformity with setpoint.

In batching mode, DISOCONT Tersus feeds a preset amount of material and automatically stops feeding at the end of a batch. System uses batch results for automatic self optimization.

Scale Specific Functions

Depending on the software loaded for the different types of scales and feeders, the following functions are available:

- With belt weighers and weighfeeders:
 - Accurate belt speed measurement
 - Belt run monitoring
 - Shifting of control for weighing/feeding to point of discharge
 - Belt influence compensation (BIC)
 - Complete control of scales peripheral devices

- Auto-calibration (automatic calibration programs), self-starting taring
- Block control with weighfeeders leads to constant belt load realized by pre-feeder control
- On Stream calibration
- With solids flow meters and feeders:
 - Adaption to different measuring chute characteristics
 - Manual and automatic zeroing
 - On Stream calibration
- With mass flow meters and feeders:
 - Accurate speed and torque measurement
 - Manual and automatic zeroing
 - Highly constant feeding
 - On Stream calibration
- With Loss-in-Weight feeders (measuring and feeding):
 - Adaptive FUZZY interference peak elimination
 - Automatic correction of material flow properties during filling
 - Highly constant feeding
 - sets of parameters for quick adaptation on different bulk solids
 - Setup programs for fast change of bulk material
- With Sequential batching:
 - Sequence of up to 10 material types
 - Adaptive feed control
- With Screw feeders:
 - Individual measurement of up to three load points
 - Feeding with high constancy
 - On Stream calibration

DISOCONT Tersus Component-Overview

Type hardware	Functions
VCU 20100	Central control electronic, minimum 1 x per system Optional extension via up to 2 additional VCU
VAI 20100	Extension by one analogue input channel
VAO 20100	Extension by one analogue output channel 0(4) ... 20 mA
VAO 20103	Extension by one analogue output channel 0 ... 10 V
VME 20102	Extension by one load cell interface channel
VFG 20103/ VFG 20104	VCU for field housing
VEG 20100	VCU for cabinet enclosure
VHM 20100	Operator panel for control panel mounting with supply by VCU 20100
VHM 20101	Operator panel for control panel mounting with separate power supply
VHM 20110	Handheld operator panel with cable
VHM 20121	Wireless handheld operator panel
VPB 28020	PROFIBUS Interface
VPN 28020	PROFINET IO Interface
VSS 28020	Modbus Interface
VCB 28020	DeviceNet Interface
VPC 20150	Service-Software EasyServe for PC
VMO or VLG	Optional local motor control unit Bluetooth Adapter for the VCU

Type Software for VCU 20100	Functions
VBW 20170	Beltweighers MULTIBELT
VWF 20170	Weighfeeders MULTIDOS
VLW 20170	Loss-in-Weight Feeder MechaTron, ProFlex, PureFeed
VIF 20170	Solids flow meters and feeders MUTISTREAM
VMC 20170	Mass flow meters and feeders MULTICOR
VBC 20170	Multi ingredient batch feeding
VSF 20170	MULTIFLEX screw feeder
VIO 20170	Input/output extension unit VCU

Optional control of a group of scales in accordance with the separate data sheet DISOCONT Master running in separate process computer hardware.

CONiQ[®] Control 4.3" Compact

Weighing controller for industrial scales

- Intuitive touch controls
- Web-based user interface
- Modular design
- Simple system integration
- Legal-for-trade according to EN 45501
OIML R51 / NTEP

CONiQ Control 4.3" Compact is an innovative and flexible weighing control system for various industrial weighing applications and process controls. Awarded the reddot award 2019, the touch control interface intuitively guides the user through the program (according to ISO 9241) directly on the device or also using the web-based remote access.

Modular design

Configuration appropriate for your application.

- Functions determined by the software module used
- Three freely assignable slots for I/O expansion modules
- Color TFT touch display
- Connection of additional peripherals via USB
- No re-verification necessary when replacing mainboard or I/O modules
- Fieldbus interface for simple system integration
- Different enclosure variants

Award-winning user interface

- Intuitive handling
- Short learning time
- Clear text fault indication
- Three definable user groups

Web-based user interface

- No App or software installation required
- Browser-based
- Easy service access
- Remote support possible
- https encryption

Optional:

- WiFi for wireless service access
- Fieldbus card
- Memory expansion for recording process data

General data 4.3" Compact device

schenckprocess

Display technology	4.3" color TFT with capacitive touch control
Display size (W x H)	95 x 53.7 mm
Power Supply	100 ... 240 VAC (-15%, +10%) Alternatively: 24 VDC (-7%, +12%) Overvoltage category II
Power consumption	Max. 30 W
Ambient temperature	Operation: -30 ... 50 °C; up to 95 % relative humidity non-condensing Storage: -30 ... 80°C; Humidity <95 %
Installation height	<= 2000 m
Date/time	Real-time clock, running time reserve without voltage: min. 7 days
Serial interfaces	1x RS485 (2-wire) and 1x RS232
Office bus interfaces	2x USB (master) 1x Ethernet (RJ45, 10/100BASE-T)
Fieldbus interface options (alternative)	Modbus-TCP Modbus-RTU PROFINET PROFIBUS DeviceNet EtherNet/IP
Slots for input/output modules	4 (1 occupied as standard for load cell interface)
Certifications	CE (UKCA; EAC, UL, IECEx, ATEX in preparation) EU type approval (NAWID) according to EN 45501 EU type approval (Catchweigher) according to OIML R51 / MID US type approval according to NTEP

Control panel device

Operating panel cut-out (W x H)	282 ^{+0.5} x 88 ^{+0.5} mm
Protection class	Front: IP 65 Back: IP 20
Weight	1.4 kg

Wall & desktop device

Protection class	With membrane gaskets at rear: IP 54
Weight	2.3 kg

Input/output modules

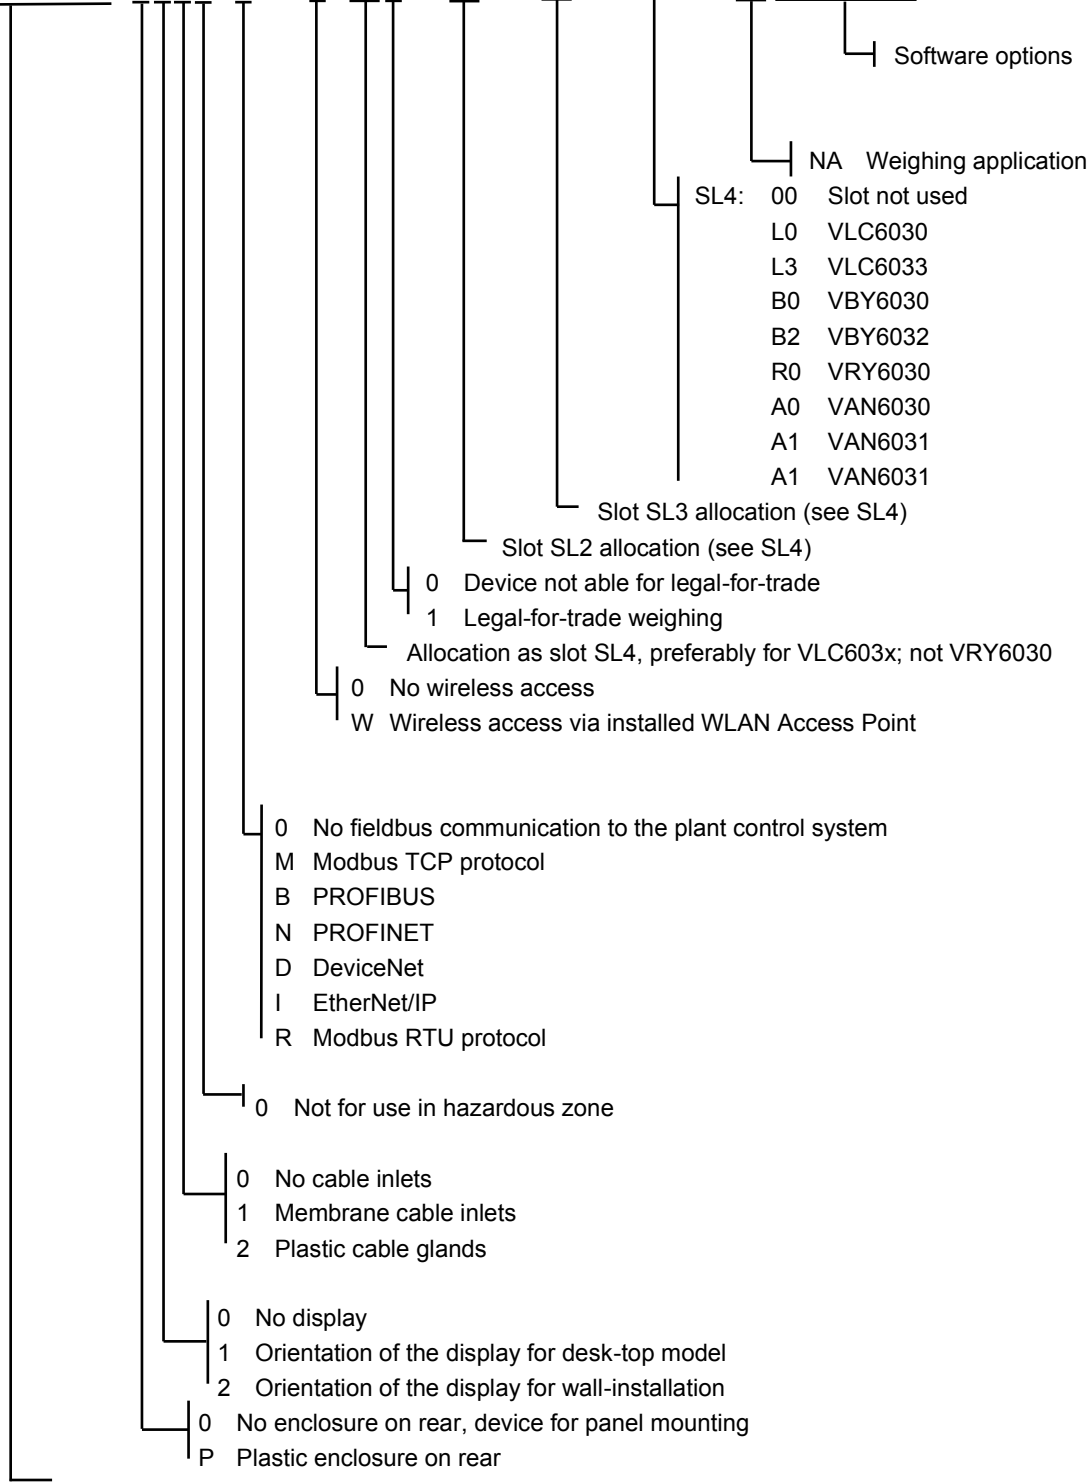

Inputs and Outputs	Module
2 weighing circuits, 2 sensor inputs	VLC6030
1 weighing circuit, 2 sensor inputs	VLC6033
6 binary inputs, 4 binary outputs (24 V, 0.5 A), 1 analog output 20mA	VBY6030
4 binary inputs, 2 binary outputs (24 V, 0.5 A)	VBY6032
8 relay outputs (230 VAC, 1 A)	VRY6030
3 analog outputs, 2 analog inputs; (each 20 mA or 10 V)	VAN6030
1 analog output, 1 analog input; (each 20 mA or 10 V)	VAN6031

Optional process communication

Interface/protocol	Module
Modbus TCP or Modbus RTU	Plug connection on basis module
PROFIBUS	VPB6030
PROFINET	VET6030
EtherNet/IP	
DeviceNet	VDN6030

Basic code for CONiQ Control 4.3" Compact device

www.schenckprocess.com/contact

CONiQ® Control

Application for static scales

- Intuitive touch controls
- Web-based user interface
- High legal-for-trade accuracy up to 6000d and 0.3 µV/d
- Multi-range/multi-interval scale, up to three ranges
- Service access for tablet or smartphone

reddot award 2019
winner interface design

CONiQ Control is an evaluation software specifically for the modular CONiQ Control system. It is specially designed for standard weighing applications, such as cargo scales (platform and roller table scale), crane scales, vehicle scales and hopper scales. Featuring intuitive handling technology, the design of the user interface was proudly awarded 'winner' for the reddot award 2019.

Applications

The CONiQ Control's core purpose is weighing a load with strain gauge load cells. This can be applied to the following applications by selecting various modules.

These include for:

- Cargo scales
- Crane scales
- Truck scales
- Hopper scales

Function

- Manual tare entry
- Tare determination by weighing the empty vessel
- Registration and printout of the weighing results
- Supports additional tasks
- Internal data storage for weighing results
- Compatible with the external legal-for-trade memory DISOSAVE

Award-winning user interface

Winner of the reddot award 2019 interface design

- Intuitive handling
- Short learning time
- Plain text error messages
- Three predefined user groups

Modular system

Configure your CONiQ Control appropriately for your application.

- No re-verification when replacing mainboard and I/O modules (except for calibrated weighing module)
- Connection of additional peripherals via USB

The main application for the CONiQ Control, **cargo scale** contains the functionality for legal-for-trade weighing of a load supported on a strain gauge load cell.

Operation or maintenance tasks are performed either via the installed touch display, an external keyboard connected via USB or an external browser. If required, enter the known tare of a weigh hopper or determine it by weighing the empty vessel. Together with the weighing result, save or print other specific information about the process in the desired format. All results are also available via the fieldbus interface, through which the controls can also be operated by, if required.

After a longer period without use, the weight is shown with large figures on the display. Touching the screen returns you to the control screen.

The following **software options** allow effective control:

Truck: Software for vehicle scales

The entrance is opened after zeroing the scale. The vehicle's registration number is entered in. Select the weighing mode for first weighing, second weight, control weighing or tare weighing.

After a first weighing, enter any required additional information and carry out the weighing. CONiQ Control will then process the entry with context-related suggested values.

The weighing result, with the additional information, is saved and printed if required.

Crane: Software for crane scales

Before performing the weighing, select the method to be used to determine the tare: manual input or measurement. After inputting additional information about the weighing process, you can start the weighing. The result, with the additional functions, is then saved and printed if required.

Hopper: Software for hopper scales

The application allows the setting of fixed (weight-) thresholds or percentage limits related to the maximum fill level. The current fill level - liquid or bulk material - is then displayed in percent and in the selected measuring unit. The software is thus used for quick

and uncomplicated monitoring of the fill level of a hopper and allows two-point refill control to prevent overflow or unwanted draining.

Data of the weighing channel

Supply for strain gauge load cells	5 VAC
Input signal	0 - ±17 mV
Input resistance of the load cells	> 35 Ohm
Sensitivity in legal-for-trade applications	0.3 µV/d
Scan rate	129 per second
Increment of the display	1, 2, 5 in the last digit
Units of weight	kg, g, t, lb, N, kN, lt, st
Resolution of the legal-for-trade measured value²⁾	Max, 6000 d Multi-range: 3x4000 d Multi-interval: 3x4000 d
Resolution of the non-legal-for-trade measured value	16 million parts
Tare range	0 ... 100 % ¹⁾
Zero Setting Range	Can be set, max. 20% ¹⁾
Automatic zero-setting	If required: 0.5 d per second
Weight value filtering	0 – 10 s
Linearity error	< 0.025 ‰ ^{1) 2)}
Zero point drift TK0	< 0.024 ‰ / 10 K ^{1) 2)}
Sensitivity drift TKc	< 0.03 ‰ / 10 K ^{1) 2)}
Combined error Fcomb	< 0.05 ‰ / 10 K ^{1) 2)}
Maximum cable length	1000 m at wire cross section ≥ 0,5 mm ² Longer cable on request

¹⁾ Of the final value

²⁾ Also note the restriction as a result of the load cell used

DISOMAT® Opus Weight Indicators

- Legal for trade weighing indicator for a wide variety of applications
- Stainless steel - at a high protection class for table-top and wall mounting
- Top-hat rail design
- Panel installation version
- Built-in legal-for-trade memory (optional)
- Fieldbus interface
- Ethernet interface, can also be used for configuration
- USB cable for optional α/n PC keyboard
- All components can be exchanged without re-verification
- For hazardous areas according to ATEX category 3D

Application

The DISOMAT Opus weighing indicator is perfectly suited to all applications where weights are recorded, displayed and printed legal-for-trade. Results can be transferred to master systems for further processing.

DISOMAT Opus is also excellently suited to simple control jobs in process applications with its complete equipment of interfaces.

This indicator fits easily into data processing and control systems with its extensive communication options, regardless of whether it's PLC or PC.

Some typical applications are:

- Platform scales without major control jobs
- Bin weighers (fill level control and fill or discharge weighing)
- Simple road weigh bridges and crane scales
- Applications as weight transducers for PC-based weighing and data processing systems (such as truck scales)

Equipment

DISOMAT Opus is available in three versions:

- The basic DISOMAT Opus mini VKG 20710 has a serial interface and an analog output
- The expanded DISOMAT Opus maxi design, VKG 20700 also has
 - More serial interfaces
 - Binary I/O
 - A wide range of communication capabilities

Both indicators have a standard stainless steel console shaped case in protection class IP65 that is suited for table-top and wall mounting (cable outlet downward with wall mounting).

These indicators have an easily readable back lighting LCD display for showing weight with clear text operator guidance. Data is keyed in via flexible membrane keyboard with 9 or 21 keys.

Beyond that, there is the

- VEG 20720 design for top-hat rail assembly in the control cabinet – also legal for trade and including a display

- VEG 20700, panel installation unit for installing into a control panel

These instruments also have extensive standard interface equipment that makes it suitable both for control and communication applications.

All instruments – including those with a keyboard – can be conveniently configured and calibrated via the DISOPLAN PC program.

Since Ethernet is increasingly becoming the communication standard even in industry, Opus maxi and the top-hat rail unit have a standard equipment 100 MBaud network connection.

The following options are available

- Legal for trade data memory
- Remote PC keyboard (only with the Opus maxi)
- Fieldbus cards and network cards
- DISOMAT Opus maxi VKG: ATEX category 3D

Communication

With as many as three serial interfaces, DISOMAT Opus is excellently equipped for exchanging data with its environment.

For example,

- Printer
- Large display
- Data processing

can be connected at the same time.

Two of the interfaces are designed as RS232. The third (RS485-2/4-wire) is especially suited to communication on the bus and at greater distances.

The Ethernet connector (10/100 MBaud) is operated in the control systems via the Modbus-TCP protocol. Optionally, protocol EtherNet/IP is available as well. Another alternative is calling up HTML pages stored in the instrument via a standard web browser. The instrument can also be configured via the Ethernet connector.

Beyond this fieldbus systems and networks can be connected via optional communication modules.

Parallel signal interchange

For control jobs, DISOMAT Opus has the following parallel inputs and outputs (except Opus mini):

- 4 optocoupler inputs 24 V
- 4 relay outputs, suited for 230 VAC to switch a traffic light

Beyond this, all instruments (including the mini) have a 12 Bit analog output that can transfer weight or material flow to a PLC or display.

Operation and Settings

Standard DISOMAT operation is in German and English. All operator guidance is carried out and data is entered in clear text.

You can easily load other operating languages into the instrument via the PC-assisted DISOPLAN configuration program (WINDOWS program) (Italian, French, Dutch, Polish, Slovakian, Slovenian, Spanish, Czech, Hungarian and Russian are presently available. Other languages are available at request).

DISOPLAN also allows:

- setting all instrument parameters
- calibrating the instrument
- conveniently configuring the print pattern
- read-out and display of weight signals
- reading out the complete instrument configuration (backup)
- restoring stored data into a DISOMAT. This means a substitute can be prepared at short notice

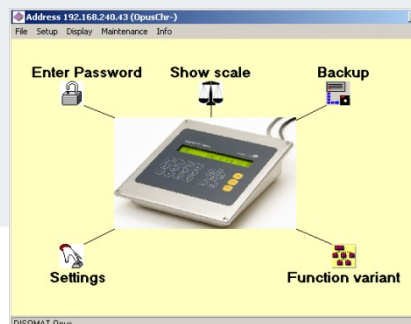

All parameter and calibration data are stored power failure safe in the instrument. The real-time clock runs at least 7 days without a power supply.

Functions

Beyond the basic scale functions such as

- Acquire and clear tare
- Set to zero
- Print

DISOMAT Opus can also carry out a series of other functionalities.

To use them, one of the 'function variants' in the instrument is activated. This puts DISOMAT into a configuration for specific applications that both allocates the essential actions to the six function keys and assigns the inputs and outputs of the instrument to the matching signals.

The following function variants can be activated:

- Cargo scale (weighing/ printing/balancing)
- Filling scale (single component butchering)
- Discharge scale (single component butchering)
- Crane Scale
- Road Weighbridge

Print-out

Variable print pattern formatting allows you to freely lay out your weighing report. You can e. g. print out the following along with the weight data:

- the date and time
- Serial no.
- Balance totals
- the number of balanced weighings
- 5 strings with as many as 25 digits
- 3 stored texts with 26 characters each

You can conveniently format the print-out in the DISOPLAN program. The user arranges all of the printing elements the way they should appear on the print-out later. You no longer have to spend a lot of time keying in control sequences and the like.

Legal-for trade memory

The optional built-in legal-for-trade memory releases the user from the necessity of creating and archiving legal for trade vouchers on paper.

Equipment

In spite of its low price, DISOMAT Opus has enormous processing performance. The 32 Bit ARM controller also has sufficient power reserves for fast weighing processes, simultaneous operation of various interfaces and also for future applications.

Our dongle strategy

Our proven strategy of the intelligent load cell connector (dongle) is also used in DISOMAT Opus: all of the scale's relevant setting and calibration data are stored in the dongle. Since all of our instruments are calibrated at the factory for identical sensitivity, you can interchange the electronic equipment at any time if there is a defect. After attaching the dongle, the scale is correctly configured **and calibrated again**. This means that even legal for trade scales do not have to be recalibrated or reverified.

Pattern approval

DISOMAT Opus is approved for non-automatic scales (throughout the European Union), with a maximum of 6,000 digits or as a multi-range/ multi-interval scale with as many as 3 x 4,000 digits. Together with the maximum resolution of 0.6 μ V / increment, this instrument is well equipped for demanding jobs such as with a high preload.

DISOMAT® Opus - ZEUS Weighbridge

- **DISOMAT® Opus Road/Rail Weighbridge application package**
- **Easy operation**
- **Legal-for-trade measurement value transducer for use in PC controlled scale workplaces**
- **Integrable legal-for-trade memory**
- **Separate strike-key keyboard for alphanumeric input**
- **Also suitable for use as static rail weighing system**

Application

This application program ZEUS provides DISOMAT® Opus with the basic functionality of a road or rail weigh-bridge.

The weights acquired on incoming and outgoing vehicle during first and second weighing are used to determine the NET weight of load.

Single weighing operations can also be performed.

For every single vehicle, a data record is prepared and transferred to the connected printer via printer interface.

In addition, DISOMAT Opus is excellently suitable for use as legal-for-trade measurement value transducer for scale control via PC.

Connected with an EDP system, DISOMAT Opus offers a convenient backup mode.

Construction

The ZEUS application package is a component of the software of DISOMAT Opus. It is activated after you acquire the license.

If desired, the known scale and calibration parameters can also be set by SCHENCK.

DISOMAT Opus ZEUS comes with separate strike-key keyboard and suitable printer complete with connecting cable.

In place of the printer, ZEUS can also be equipped with integrated legal-for-trade memory.

Function

First-/ Second Weighing

The vehicle is weighed upon plant entrance.

The weight is put into intermediate storage under the truck license or wagon number.

First weighing data are transferred to printer interface or registered in the legal-for-trade memory.

The outgoing vehicle is weighed again. The stored weight is identified using the truck or wagon number.

The difference in weight equals the material amount loaded or unloaded in plant.

When a printer is connected, the weights from first and second weighing are finally printed out on the weighing certificate including the calculated net weight (see below).

Querying the vehicle number / wagon number and sort number can be suppressed by configuration for simple applications that have to be done quickly. The data record of first weighing is maintained as long as possible even after second weighing. This makes it possible to repeat second weighing, for instance if there is an overload. If first weighing is done for the vehicle again or if the first-weighings file is full, the data record is deleted.

Single Weighing

Vehicle is weighed once-only; TARE weight of load can be entered in manual, for system to acquire the NET weight.

Weighing Using Fixed Tare Weight

This mode is designed to acquire the weight of load using the acquired totals weight and the stored empty weight of the vehicle.

File Update Functions

These functions let you Delete / Edit / Print the contents of:

- Materials file
- Vehicle file
- Fixed tare file

Function of Printer (if present)

- Printout of acquired weights
- Printout of stored data contents

Files

- First weighings file for storage of 99 input weighings
- Fixed tare file for storage of 25 empty weights of known vehicles
- Materials file for storage of 25 material types

Summating Function

The total amount of a certain material type loaded/unloaded is acquired and can be displayed and printed out at any time.

Signal Control

Designed for control of input/output signals existing or supplied, with the following functions:

- When vehicle drives onto scale, entrance and exit are closed (RED signal).
- If weighing is complete, exit signal turns GREEN.
- If scale is totally relieved, entrance signal also turns GREEN and scale is ready for next weighing operation.
- Signal system can be connected to the device direct using an external control system.

Weigh slip output on printer, if any

Date	Time	Cons no.	Mem. no.	Truck no.	Material no.	Material name	Weight of load on scale	Stored first weight	NET weight

DISOMAT® Tersus

Weighing electronics

- A weighing terminal with all the equipment
- Clear operator guidance on colored, graphical LCD display
- Built-in Ethernet port
- 4 built-in USB Ports
- Connection for industrial fieldbuses
- Bluetooth interface (optional)
- Built-in legal-for-trade memory (optional)
- Remote α/n swivel keyboard (optional)
- Modular and expandable I/O
- Also available with two measuring channels

You can also have the option of activating its configuration as a vehicle scale (inbound/outbound scale) or a crane scale with collective load memory.

Furthermore, you can adapt the functionality of the DISOMAT® Tersus to virtually any weighing job by adapting the links between the logical function blocks.

You can do either this by using the convenient DISOPLAN PC program (a graphic interface) or directly on the device. This makes it easy and cost-effective to adapt the terminal locally without major programming effort.

In the optional two-channel measuring instrument design, the DISOMAT® Tersus can also be used for operating twin-unit road weigh bridges or two-trolley cranes with a separate overload indicator, or more you can simultaneously monitor the levels of two bins. You can even carry out to feeding processes at once.

Equipment

The weight is displayed permanently on the backlit, color display in QVGA (320 x 240 dots) format, also while the operator makes entries in the 7-line

Application

The compact DISOMAT® Tersus weighing terminal is ideal for use in a wide range of weighing applications, regardless of whether you're focusing on operating scales or data processing systems, controlling processes or communicating with on-site systems. The device has four predefined configurations as function variants stored for typical applications that can be easily called up:

These function variants

- Cargo scales
- Crane scales
- Filling scales
- Discharge Scales

They offer the user a proven scope of functions adapted to each individual application including the option of adapting the weigh terminal to the special requirements of his scale.

dialog field of the display or during status messages.

For instance, this might be information on the progress of feeding in progress (a block diagram), on the position of the inputs or outputs or help for operating the terminal.

A special mode ("the telephone alphabets") can also be used to key in α -characters via keyboard. There is also the option of a remote raised keyboard to make it more convenient to key in inputs, particularly for frequent text inputs.

A second, independent control terminal can be added at any time with a second DISOMAT® Tersus in the mirror' configuration.

You can use a total of 8 binary inputs and 12 binary outputs for controlling the scale and DISOMAT® Tersus. An analog I/A module (two input/to outputs) can also be added.

You can adapt the functionality of the inputs/outputs by linking the function blocks in broad limits to the application's requirements. The number of binary inputs/outputs can be expanded as required with upgrade modules.

Three serial interfaces enable you to connect peripheral units such as printers and remote displays while connecting up data with the data processing or PLC unit. If necessary, another serial interface can be retrofitted.

There are coupling modules available that can be retrofitted for coupling the most common industrial fieldbus systems (PROFIBUS DeviceNet) – and the Ethernet interface (100 MBaud) is even standard terminal equipment.

The DISOMAT® Tersus has 4 built-in USB ports for connecting up the external keyboard, a legal-four-trade memory and a printer.

The DISOMAT® Tersus measuring equipment has extremely high resolution and outstanding measuring speed featuring great reserves even for the most difficult weighing applications, such as scales with minor load cell utilization, scales whose load sensor is in the explosive range, and for fast filling processes. Even extreme temperature demands are no problem for this terminal – the rated temperature range extends from -30 °C ... +60 °C.

The scale specifications (including the calibration data) are stored in the connecting plug of the load cell cable (dongle). If there is a fault, any component in the terminal can be replaced without having to recalibrate or reverify it.

Together with its modular design, this keeps downtimes and repair expenditures on the terminal to a minimum.

The available housing designs

- Desk-top model
- Panel mount unit
- Stainless steel unit
- Field device
- and 19" rack

They offer the right packaging for practically every environment.

Operation and Settings

The standard DISOMAT® operating languages are German and English.

You can easily load other operating languages into the device via the PC-assisted DISOPLAN parametrizing and configuration program (WINDOWS program) (Italian, Spanish, French, Polish, Czech, Hungarian and Russian are currently available. Other languages are available on request).

DISOPLAN also allows:

- the graphic configuration of the function blocks
- set all instrument parameters
- adjust the terminal
- easily format printed vouchers
- Recording weight curves
- Reading out the entire terminal configuration (back-up)
- Restoring the saved data to a DISOMAT® Tersus (Restore). This allows e.g. a replacement device to be prepared at short notice. Together with the dongle concept, a short down time can be guaranteed if there is a fault while at the same time guaranteeing minimal spare parts stocks

DISOPLAN communicates with the DISOMAT® either

- serially
- via Ethernet
- or via Bluetooth (optional)

All parameter and adjustment data are stored in the terminal to protect them from power failure. The real-time clock runs for at least 7 more days.

Print

Variable print pattern formatting allows you to freely lay out your weighing report.

You can graphically configure the printed vouchers in DISOPLAN (direct preview).

You can print out the following along with weight data:

- Date and Time
- Serial no.
- Balance totals
- The number of balanced weighings
- 5 strings up to 25 digits
- 3 saved texts
- each with 26 characters

The arrangement of printing elements is defined in a format and you can store 6 different formats.

They offer the right packaging for virtually every environment.

Technical Data

Display	Color LCD, 240 x 320 pixels, 120 mm x 90 mm, Weight display 22 mm digit height,
Keyboard	Membrane keyboard with 33 multiple-function keys, 12 of which are configurable function keys
Supply voltage	85 ... 250 VAC, 47 ... 63 Hz 24 VDC (18 ... 36 VDC)
Power consumption	max. 20 VA
Temperature range	Operating temperature: -30 °C ... +60 °C able for legal-for-trade: -30 °C ... +40 °C
Electromagnetic ambient conditions	E2 (OIML D11)
Input signal	0 ... 35 mV
Sensitivity	0.4 µV/d
Scan rate	132 measurements/s
Increment value	1, 2, 5, etc. adjustable from 0.01 ... 5000
Unit	kg, g, t, lb, N, kN
Number of digits	Legal-for-trade operation: max. 8000 d Multi-range scale 3 x 4000 d Multi-interval scale 3 x 4000 d
Taring	Up to 100 % of the weighing range
Zeroing system	Can be set to a max. 20 % Automatic zero point lag 0.5 d/s, can be switched off
Filter	Network-synchronous noise-signal suppression Interference signals ≥ 100 dB Common mode rejection ≥ 110 dB Software filter, filter time 0 ... 10 s
Linearity error	< 0.025 ‰
Zero point stability, TK_0	< 0.4 µV / 10 K corresponds to 0.012 ‰ / 10 K
Range stability, TK_c	< 0.03 ‰ / 10 K
Accuracy, F_{comb}	< 0.05 ‰ / 10 K
Date/time:	Real-time clock, back-up time min. 7 days
Load cell impedance	At least 43 Ω (corresponds to 8 x 350 Ω - load cell or > 20 RT load cells @ 4000 Ω)

	also valid as minimum total impedance for two-channel terminals (such as 2 x 4 x 350 Ω)
Load cell supply	12 V alternating voltage supply
Binary inputs	8 inputs, indirect coupled, securely isolated, 18 ... 36 VDC Auxiliary 24 V supply for controlling the inputs (max. 150 mA)
Binary outputs	12 outputs, electrically isolated, securely isolated (relay), passive. Load capacity 24 VDC/VAC max. 500 mA, 90 ... 250 VAC max. 300 mA. The refresh rate of the outputs in the 'fast comparator' function is 132 x per second
Serial interfaces	3 interfaces for printer, DP or secondary display S1 and S2: convertible to RS232 RS422/485-4-wire RS485-2-wire The change can be made using software (no jumpers) S3: RS232 fixed, using Bluetooth as an option max. baud rate for all interfaces: 38400 Baud
Data processing procedures	Siemens 3964R S5 (RK512) Modbus Standard Schenck DDP 8672 procedure Schenck DDP 8785 poll procedure
Secondary display procedures::	DTA DDP8861 DDP8850
Ethernet	10/100BASE-T, full duplex-compatible
USB ports	4 x USB 2.0 Host (Master)

Options

Second measurement input	such as for scales with switching and network switching
Remote PC swivel keyboard	VTT 28000 (USB)
Data input via barcode scanner	on request
Legal-for-trade ability VMM20450 data memory for weigh data as a substitute for check printer	Memory capacity min. 256 MB for typically 3 m. weighing operations
Expansion card VEA 20451	2 outputs, 0(4) ... 20 mA, Max load 500 Ω

	Resolution: 10,000 parts Refresh rate: 10/s 2 inputs 0(4) ... 20 mA, and 0 ... 10 V Linearity <0.15 ‰ Zero-point stability: <0.25 ‰/10 K Range stability: <0.25 ‰/10 K Additionally: two binary outputs open collector 24 VDC, galvanically free, max. 200 mA
Option card serial	1 additional serial interface RS 232 / RS 485-2 / RS 485-4
Fieldbus card PROFIBUS	Protocol PROFIBUS DP and DP-V1
Fieldbus card PROFINET I/O	Protocol PROFINET IO Conformance Class B
Fieldbus card DeviceNet	
Bluetooth module (serial interface S3)	Class 1 or 2 module, maximum transmission link 100 (15) m
Radio data transmission	For printing data or data processing connection
I/O extensions	Binary inputs/outputs (max. additional 16 inputs or 16 outputs) Added analog output
The matching barrier subassemblies for connecting intrinsically safe weighing platforms and operating units in the ATEX 2G category (zone 1)	
Other options or customised functions for your applications at request

DISOMAT® Tersus - Unit Load Handling Scale

Unit Load Handling Scale (Example: Roller Train Scale)

- **Function variant for platform, roller train and special platform scales**
- **Weighing sequence control via keyboard, input contacts or EDP interface or fieldbus**
- **Variable print pattern formatting using 3 existing print patterns**
- **10 fixed tare memories**

Application

The Unit Load Handling Scale function variant provides all functions required for DISOMAT® Tersus to control a platform, roller train or special platform scale.

Construction

Permanently stored in DISOMAT® Tersus, the linkage can be loaded by the user and changed to suit his specific requirements.

Individual functions, operating instructions, function block plan and parameter table are detailed in the Operating Manual.

If required, setting can be made by Schenck Process with known scale and calibration parameters as well as requisite function block parameters, such as MIN/MAX thresholds, being adapted accordingly.

The user or Schenck Process can easily change the standard variant.

Function

When unit loads are weighed, hopper or pallet weights as tare can be deducted from Gross weight.

The weighing result can be printed on a weigh slip or output as list report. Balancing takes place automatically after each printout. It can also be registered in the optional legal for trade memory.

Depending on Tare status, Gross or Net weights are balanced, with balance comprising the cumulative totals weight and the number of weighing operations performed. Balance can be displayed and printed.

Weighing sequences

- Gross weighing
- Gross/Net weighing with automatic taring
- Net weighing while keying in manual tare
- Net weighing with selection of stored tare value

Function keys

- Acquire tare
- Clear tare
- Key in tare
- Select fixed tare
- Set to zero
- Enter string
- Print single weight
- Print intermediate total
- Print total / clear balance
- Repeat printing
- Test functions

Input contact assignment

- 1: Single printout
- 2: Acquire tare
- 3: Clear tare
- 4: Set to zero
- 5: Acknowledge event
- 6: n / a
- 7: Print intermediate total
- 8: Print total / clear balance

Output contact assignment

- 1: Weighing complete
- 2: Ready
- 3: Min contact
- 4: Max contact

Printing

Single printout is preset with print pattern 1; totals printout, with print pattern 3.

Assignment of print pattern to function key can be changed at will, e.g. single printout key can also be assigned print pattern 2.

The variable print pattern formatting gives the user the freedom to design his own weighing report. Defaults are as follows:

Print pattern 1:

- 1 head line and 1 line for weigh data. A string with product data of up to 30 digits can be entered for each printout. This string remains stored until being overwritten. After each printout a form feed is effected.

Print pattern 2:

- 1 line for weigh data. String can be entered and remains stored until being overwritten. After each printout a line feed is effected

Print pattern 3:

- 1 line for totals printout without string.

EDP communication

For DISOMAT® Tersus, the following EDP transmission protocols are available:

- Schenck standard protocol (DDP 8672)
- Schenck poll protocol (DDP 8785)
- Siemens 3964 R
- Siemens 3964 R for SIMATIC S5 / S7
- Modbus

DISOMAT® Tersus caters for a fixed set of commands that can be addressed by the EDP programmer, if required.

Eligible commands, messages and protocols are detailed in the Manual "Data communication"

The EDP commands most frequently used are listed below.

Typical EDP commands:

- Tare
- Clear tare
- Preset tare value
- Set to zero
- Request single weight
- Request weight at standstill
- Request cyclic weight
- Request balance
- Clear cumulative total
- Preset string
- Print patterns 1, 2, 3
- Print with copy to EDP

Fieldbuses

In addition to the serial EDP interfacing, DISOMAT Tersus Unit Load Handling Scale can also be controlled using commercial industrial fieldbus systems.

For details, please see System Manual BV-H 2334 and Data communications Manual BV-H 2359.

Example

Single printout (print pattern 1):

Date	Timet	No.	Cons. (String)	Weight
25.02.00	10:45:00	123	1234567890	<123,5kg>B <24,0kg>T <99,5kg>Net

Single printout list (print pattern 2):

25.02.00	10:45:00	123	1234567890	<99,5kg>Net
25.02.00	10:47:00	124	1234567890	<100,0kg>Net

25.02.00	11:55:00	150	1234567890	<99,5kg>B
25.02.00	12:10:00	151	1234567890	<99,0kg>B
25.02.00	12:25:00	152	1234567890	<100,5kg>Net

totals printout (print patternt 3):

25.02.00	12:30:00	30		3001,5kg SU
----------	----------	----	--	-------------

DISOMAT® Tersus - Crane Scale

- Crane Scale application package
- Control of weighing functions via crane pendant keys
- Variable print pattern formatting
- Slack rope and overload reporting contacts
- Data transmission to the printer or data processing unit by infrared link or radio (optional)
- Collective load memory (optional)
- Legal-for-trade data storage (optional)
- Two-measuring-channel variant for dual-trolley cranes

Application

The Crane Scale function variant provides all functions required for DISOMAT® Tersus to control a crane scale from crane cabin or ground station.

Construction

Permanently stored in the DISOMAT® B EPROM, linkage can be loaded by user and changed to suit his specific requirements.

Individual functions, operating instructions, function block diagram and parameter table are detailed in the Operating Manual.

If required, setting can be made by Schenck with known scale and calibration parameters as well as requisite function block parameters, such as MIN/MAX thresholds, being adapted accordingly.

Function

All weighing functions can be triggered via input contacts from keys on pendant or via radio transmission.

Cab controlled crane scales are operated direct from DISOMAT® Tersus keyboard.

Before weighing start, the weight of auxiliaries can be tared off.

The weighing result can be printed in form of a list. The printing process is shown on the large display.

To avoid double printing, no new print job is accepted before scale has been unloaded.

It automatically balances every time it prints out while totaling the gross or net weight depending upon the tare status. The balance contains the total weight and number of weighings balanced.

The optional collective load memory (LKS) totals the load of the hoist and the system uses the collective load and other specific plant data to calculate the anticipated remaining hoist life. You can call up the remaining life on the unit display and large display.

Input/Output Contacts

[values in brackets optional]

Inputs

- Acquire / Clear Tare
- Set to Zero / Test / Acknowledge Error
- Weigh and Print
- [Print Total]
- [Scale 1 Hoist Active]
- [Scale 2 Hoist Active]

Outputs

- Slack rope (Gross < 0)
- Overload (Scale 1)
- Change Over Load To Be Lifted Scale 1 (higher lifting capacity)
- Ready
- [Slack rope Scale 2]
- [Overload Scale 2]
- [Change Over Load To Be Lifted Scale 2]
- [Overload Total (Scales 1+2)]

Function Keys

- Acquire tare
- Clear tare
- Display tare
- Key-in tare
- Set to zero
- Enter string
- Print single weight
- Print total / reset balance
- Repeat printing
- Test functions

Options

- Printer
- Large-size displays
- Legal-for-trade memory
- Data transmission
- Bus interfaces
- Collective load memory
- Second measuring channel

Print Pattern (sample default setting, easy to change on device)

Single Printout:

Date	Time	No.	Cons. (String)	Weight
23.04.01	12:10:00	151		<99,0kg>B
23.04.01	12:25:00	152		<100,5kg>Net

With cab controlled crane scales, you can enter a product data string for each printout.

String remains stored until being overwritten.

Single Printout With String:

Date	Time	No.	Cons. (String)	Weight
23.04.01	12:10:00	151	333-247-A	<99,0kg>B
23.04.01	12:25:00	152	333-247-A	<100,5kg>Net

Totals Printout:

23.04.01	12:30:00	30		3001,5kg SU
----------	----------	----	--	-------------

Variants (Examples)

DISOMAT® Tersus panel-mounting unit in field housing 1 measuring point, no infrared, no collective load memory
DISOMAT® Tersus panel-mounting unit in field housing 1 measuring point, infrared, no collective load memory
DISOMAT® Tersus panel-mounting unit in field housing 1 measuring point, no infrared, collective load memory
DISOMAT® Tersus panel-mounting unit in field housing 1 measuring point, infrared, collective load memory
DISOMAT® Tersus panel-mounting unit in field housing 2 measuring points, no infrared, no collective load memory
DISOMAT® Tersus panel-mounting unit in field housing 2 measuring points, infrared, no collective load memory
DISOMAT® Tersus panel-mounting unit in field housing 2 measuring points, no infrared, collective load memory
DISOMAT® Tersus panel-mounting unit in field housing 2 measuring points, infrared, collective load memory
DISOMAT® Tersus stainless steel unit 1 measuring point, infrared, collective load memory
DISOMAT® Tersus stainless steel unit 2 measuring points, infrared, collective load memory

All variants include

- Mounting tools for field housing
- Large size display with mounting tools
- Documentation (including all wiring diagrams)
- Setting of scale parameters
- Parametrisation of collective load memory, if any.

Further configurations available upon request. For more information on DISOMAT® Tersus Crane Scale, see Manual BV-H2133AA.

Schenck Process GmbH

Pallaswiesenstr. 100
64293 Darmstadt, Germany

DISOMAT[®] Tersus - Filling Scale

- **Function variant for fill feed into scale hoppers or containers on platform scales**
- **Feeding with full and dribble feed**
- **Automatic tolerance check and tracking optimization**
- **Control of weighing sequence via keyboard, input contacts or EDP interface or fieldbus**
- **Weighing report and totals printout**
- **10 fixed tare memories for containers with residual contents**
- **10 parameter records for materials with different feed properties**

Application

The filling Scale function variant provides all functions required for the DISOMAT Tersus to realize a single-ingredient feed control: Set/act comparison in full feed and dribble feed, material flow monitoring, tolerance check and tracking optimization.

Equipment

Permanently stored in the DISOMAT Tersus, the linkage can be loaded by the user and changed to suit his specific requirements. Individual functions, operating instructions, function block plan and parameter table are detailed in the Operating Manual.

If required, setting can be made by Schenck with known scale and calibration parameters, as well as dosing parameters being adapted accordingly.

For materials with varying properties, 10 selectable parameter records (materials files) are available.

Functions

The filling scale is designed to feed liquids or bulk solids into hoppers or fill them into containers. Filling is in two speeds, by full feed and dribble feed, to setpoint. You can also trigger feed units with an analog interface (such as discharge screws). The amount fed is checked for tolerance and made up, if necessary. Overfill is reported by a message. For optimization of feed process, pre-act and main contact are tracked. After each aborted or completed batch, weigh data are automatically printed and totalised. Accumulation contains cumulative total of NET weights and number of totalised batches. Accumulation can be displayed and printed.

Weighing Sequences

- Fill weighing
- Fill weighing with discharge
- Multiple fill weighings with discharge

Function keys

- Acquire Tare
- Clear Tare
- Start
- Stop
- Abort
- Print intermediate total
- Print total and clear cumulative total
- Print Repeat
- Select Material / Enter Set-point
- Set to Zero
- Test Functions

Other Menu Tree Functions

- 5: Acknowledge event

Output Contact Assignment

- 1: Full Feed
- 2: Dribble Feed
- 3: Discharge
- 4: Ready
- 5: Feeding active
- 5: N.C.

Printing

Single printout is preset with Print Pattern 2; totals printout, with Print Pattern 3. Assignment of print pattern to function key can be changed e.g. Single Printout key can also be assigned Print Pattern 1.

The variable print pattern formatting gives the user the possibility to design his own weighing reports. Defaults are as follows:

Print Pattern 1:

One head line and one line for weigh data. A string with product data of up to 30 digits can be entered for each printout. This string remains stored until being overwritten. After each printout a form feed is effected.

Print Pattern 2:

One line for weigh data. String can be entered and remains stored until being overwritten. After each printout a line feed is effected.

Print Pattern 3:

One line for totals printout without string.

Print Pattern

Single Printout (Print Pattern 1):

Date	Time	Cons. No.	(Weigh Data)	Weight
25.02.00	10:45:00	123	1234567890	<123.5kg>B <24.0kg>T <99.5kg>Net

Single Printout List (Print Pattern 2):

25.02.00	10:45:00	123	1234567890	<99.5kg>Net
25.02.00	10:47:00	124	1234567890	<100.0kg>Net
.				
25.02.00	11:55:00	150	1234567890	<99.5kg>B

EDP communication

For DISOMAT Tersus, the following EDP transmission procedures are available:

- SCHENCK Standard Protocol (DDP 8672)
- SCHENCK Poll Protocol (DDP 8785)
- SIEMENS 3964 R (DDP 8782)
- SIEMENS 3964 R for SIMATIC S5/S7

Disomat Tersus caters for a fixed set of commands that can be addressed by the EDP programmer, if required. Eligible commands, messages and procedures are detailed in the Data Communication Manual. The EDP commands most frequently used are listed below.

Typical EDP commands:

- Tare
- Clear tare
- Preset tare value
- Set to zero
- Request single weight
- Request weight at standstill
- Request cyclic weight
- Request cumulative total
- Clear cumulative total
- Preset string
- Print patterns 1, 2, 3
- Print with copy to EDP

Response messages by DISOMAT Tersus

- Message is processed
- Command executed
- Command executed, send data to EDP

Messages Initiated by DISOMAT Tersus

- Feeding complete
- Feeding interrupted
- Weight at standstill
- Cyclic weight
- Taring complete
- Zeroing complete
- On the "Print With EDP Copy" command, DISOMAT Tersus acknowledges successful printout in form of a message that can widely be configured at will.

Fieldbuses

In addition to the serial EDP interfacing, DISOMAT Tersus Discharge Scale can also be controlled using the most frequent fieldbus systems.

- Modbus
- Profibus DP-V0
- Device Net
- Modbus -TCP (via Ethernet)

For details, see System Manual BV-H2334 and Data Communication Manual BV-H2359.

Flexibility

Although the Filling Scale function has been set and supplied, the logical function block system can be used to the full extent. The filling scale can be matched to new requirements or replaced by a totally different function. This can be performed using the DISOMAT Tersus keyboard or, even more convenient, on PC using the DISOPLAN software tool.

Variants

DISOMAT Tersus Weighing Terminal
see Spec Sheet BV-D2273GB

DISOMAT® Tersus - Discharge Scale

- **Function variant for discharge feed from weigh hoppers**
- **Feeding by full and dribble feed**
- **Automatic tolerance check and tracking optimization**
- **Weighing sequence control via keyboard, input contacts or EDP interface or fieldbus**
- **Weighing report and totals printout**
- **10 parameter records for materials with different feed properties**
- **Legal-for-trade dynamic weighing of rail vehicles**

Application

The discharge scale functional variant gives DISOMAT Tersus the functionality of one-component feeding control: Set/act comparison in full feed and dribble feed, material flow monitoring, tolerance check and tracking optimization.

Equipment

Permanently stored in the DISOMAT Tersus, the linkage can be loaded by the user and changed to suit his specific requirements.

Individual functions, operating instructions, function block plan and parameter table are detailed in the Operating Manual.

If required, setting can be made by Schenck with known scale and calibration parameters as well as requisite feed parameters.

For materials with varying properties, 10 selectable parameter records (materials files) are available.

Functions

The discharge scale is designed to feed liquids or bulk solids out of hoppers into containers. Discharge is in two speeds, by full feed and dribble feed, to set point. You can also trigger feed units with an analog interface (such as discharge screws). The amount fed is checked for tolerance and made up, if necessary. Overfill is reported by a message.

After each aborted or completed feed operation, weigh data are automatically printed and balanced. The balance contains the cumulative total of NET weights and the total number of NET weighings performed. The balance can be displayed and printed.

Weighing Sequences

- Discharge weighing
- Discharge weighing with refill
- Multiple discharge weighings with refilling

Function keys

- Acquire Tare
- Clear Tare
- Display Tare
- Start
- Stop
- Abort
- Print intermediate total
- Print Total / Clear Balance Memory
- Print Repeat
- Select Material / Enter Set-point
- Set to Zero
- Test Functions

Other Menu Tree Functions

DISOMAT® Tersus - ZEUS Road Weighbridge

- **DISOMAT® Tersus Road Weighbridge Applications Package**
- **Easy Operation**
- **Legal-for-trade Transducer with PC Controlled Scales-Workstations**
- **Integrable Legal-For-Trade Memory**
- **Remote Swivel Keyboard for Alphanumeric Input**
- **Model with Two Measuring Channels Available for Twin Scales**
- **Can also be Used for Static Rail Weighbridges**

Applications

The ZEUS program gives the DISOMAT® Tersus the standard functionalities of a road or rail weighbridge.

The net weight of the cargo is calculated from the difference between the weight of the vehicle measured at entrance and exit (first and second weighings).

Single weighings may also be performed.

A data set is created for each vehicle and forwarded to a connected printer via the printer interface.

The DISOMAT Tersus can also be used as a legal-for-trade transducer for scales operation per PC.

If a computer is connected, the DISOMAT still has an easy-to-use backup operation.

Design

The ZEUS applications package can be activated in every DISOMAT Tersus by entering an activation code. The parameters may be set by the operator.

The weighing and calibration parameters can be set by Schenck Process, if desired.

The remote swivel-keyboard and a suitable printer and connecting cable are supplied with the DISOMAT Tersus ZEUS complete package.

ZEUS can also be run with an integrated legal-for-trade memory instead of a printer.

ZEUS can also be used with twin scales in the model with two measuring channels.

Function

First / Second Weighing

The vehicle is weighed when it enters the site.

The weight is stored temporarily under the licence plate number or the rail car number.

In the process, the first-weighing data is transmitted to the printer interface.

The vehicle is weighed again when leaving the site.

The stored weight is identified using the vehicle's licence plate number or the number of the rail car.

The difference in weight thus determined is equivalent to the weight of the goods loaded or unloaded on-site.

If connected to a printer, the weigh bill printed will show the results of the initial weighing, the second weighing and the net weight determined (see below).

Single weighing

The vehicle is only weighed once; the tare weight of the vehicle can be entered manually so that the system can calculate the net weight.

Weighing Using Fixed Tare Weight

Used to determine the weight of cargo based on the overall vehicle weight ascertained and the stored empty weight.

File Maintenance Functions

For deleting / altering / printing the contents of:

- Materials files
- Vehicle files
- Fixed-tare files

Print Functions

(with printer connected)

- Printing the weights calculated
- Printing the data stored

Files

- First-weighing file for storing 99 initial weighings
- Fixed-tare file for storing empty-weights of 25 known vehicles

Sample weigh bill with connected printer

Date	Time	Seq. No.	Carrier No.	Licence No.	Material - No.	Material Name	Weight on the scales	Stored 1st weight	Net weight
04.10.01	14:27	0021	06	DA-DB 2344	01	Sand	8.42 t	B	
04.10.01	14:27	0022	06	DA-DB 2344	01	Sand	20.92 t	B	
								8.42 t	B
									12.50 t

Design	Order number
Complete Package: DISOMAT® Tersus ZEUS, VTG 20450 desktop device with road weighbridge program, remote swivel-keyboard, DISOPRINT 332 printer, 1 ZEUS weighing forms package, operating manual	V054083.B01
Or: Package as described above, with a printer cable but no printer	V054083.B02
Or: Package as described above, with VMM 20450 legal-for-trade memory but no printer	V054083.B03

Weigher

Options

Secondary- and Large-size Display Units as per technical data sheet BV-D2003

Stoptlights system BV-D2296

Gates System BV-D2298

Two measuring-channels model available on request

- Materials file for storing the weight of 25 materials

Totaling Function

The amount of each material weighed is measured and can be displayed and printed at will.

Stoptlights Control

Used to control on-site or (optionally) delivered

Entrance / exit stoptlights with the following functionality:

- When a vehicle enters, entrance and exit are closed (red signal).
- Once weighing is complete, a green exit signal is given.
- Once the scales are completely relieved, the entrance signal also turns green and the scales are ready for next weighing operation.
- The stoptlight can be connected directly to the device without the need for an external control unit.

DISOBOX External A/D Converter

Optionally, up to two external legal-for-trade DISOBOX A/D convertors can be connected to the DISOMATs. If so, they would replace the internal measuring channels. In this 'mechatronic' design, the A/D convertors are located directly on the scales, ie. beneath the weighbridge. Data is communicated serially and thus also safe from disruptions over longer distances.

Second Operating Station

A second DISOMAT® Tersus can be used as a second, removable operating station ('mirror device').

This function is available in every DISOMAT Tersus housing variant. The operator has an identical display and keyboard to the main device, also with the remote alpha-keyboard, if desired. Printer, computer connection etc. can also be controlled using the second operating station rather than the main device, if desired.

DISOMAT® Tersus – JASON Road Weighbridge

- **DISOMAT® Tersus Road and Rail Weighbridges Applications Package**
- **Comprehensive File Functions**
- **Flexible Configuration**
- **Easy Operation**
- **Integrable Legal-For-Trade Memory**
- **Removable Swivel Keyboard for Alphanumeric Input**
- **Model with Two Measuring Channels Available for Twin Scales**

Application

The JASON application program enables the DISOMAT® Tersus to operate road weighbridges whose requirements exceed simple inbound and outbound weighings. It can therefore be used as a substitute for simple PC solutions.

JASON determines and records the weight of goods loaded onto or unloaded from vehicles (lorries, cars or rail vehicles).

The weight is calculated in one of the following ways:

- by weighing the vehicle in the loaded and unloaded state (first / second weighing)
- by weighing the loaded vehicle and comparing this weight to the empty weight, weighed at an earlier moment and stored permanently (weighing with a fixed tare weight).
- by weighing the loaded vehicle and comparing this weight to the empty weight, which is entered manually (single weighing).

Weigh-related data are recorded, administered and logged with the freely configurable file management.

Equipment

JASON is loaded into the DISOMAT Tersus instead of the standard program. It expands the DISOMAT Tersus's standard functionalities.

The parameters can be set by the operator.

The weighing and calibration parameters can be set by Schenck, if desired.

The removable swivel-keyboard and a suitable printer and connecting cable are supplied with the DISOMAT Tersus JASON.

JASON can also be run with an integrated legal-for-trade memory instead of a printer.

JASON can also be used with twin scales in the model with two measuring-channels.

Function

First / second weighing

The lorry is weighed when it enters the site.

Depending on the configuration, a number of different, weighing-related data are also recorded (see 'File Management').

The weight of the lorry is stored temporarily under its licence plate number and, if desired, printed.

The lorry is weighed again when leaving the site.

The stored weight is identified using the lorry licence plate number.

Depending on the configuration, the data acquired on the initial weighing can be altered or supplemented.

The difference in weight thus calculated is equivalent to the weight of the goods loaded or unloaded on-site.

If connected to a printer, the weigh bill printed will show the results of the initial weighing, the second weighing and the net weight calculated along with any supplementary data recorded (see below).

Single weighing

The lorry is only weighed once; the tare weight of the lorry can be entered manually so that the system can calculate the net weight.

Weighing Using Fixed Tare Weight

Used to determine the weight of cargo based on the overall lorry weight ascertained and the stored lorry tare weight.

The size of the input field for the licence plate (14 digits) means JASON can be used with **static weighbridges**.

Print Functions

(with printer connected)

- Printing the weights calculated
- Printing the data stored
- Content and format of the weigh bill can be configured on-site within wide limits.
- The printout after the first weighing can be deselected. If this option is chosen, a legal-for-trade memory must be installed to record the result of the first weighing.

Files

The use and size of different files for weighing processes can be changed.

JASON recognizes files for:

- Customers (max. 200)
Name / Street / City / Telephone (20 digits each)
- Suppliers (max. 200)
Name / Street / City / Telephone (20 digits each)

- Carriers (max. 50)
Name (20 digits)
- Products (max. 100)
Name (20 digits)
- Fixed tare weighings (max. 200)
- First weighings (max. 250)

File Maintenance Functions

For deleting / altering / printing file contents

Totaling Function

Three (parallel) accounts are kept for each product. Each of these accounts can be printed and deleted individually.

Stoplights Control

Used to control on-site or (optionally) supplied entrance / exit stoplights, with the following functionality:

- When a vehicle enters, entrance and exit are closed (red signal).
- Once weighing is complete, green exit signal is given.
- Once the scales are completely relieved, the entrance signal also turns green and the scales are ready for next weighing operation.
- The stoplight can be connected directly to the device without the need for an external control unit.

Communication with a Computer

JASON was designed as a stand-alone application (operation directly at the device).

Standard weighing functions can be carried out using the computer interface, such as:

- Query weight
- Set / clear tare
- Print / store weight

In this case, weighing processes and file management are carried out in the computer system. JASON allows manual backup operation.

A/D Converter DISOBOX

Optionally, up to two external legal-for-trade DISOBOX A/D converters can be connected to the DISOMAT. If so, they would replace the internal measuring channels. In this 'mechatronic' design, the A/D converters are located directly on the scales, ie. beneath the weighbridge. Data is communicated serially and thus also safe from disruptions over longer distances.

Second Operating Station

A second DISOMAT Tersus can be used as a second, remote operating station ('mirror device').

This function is available in every DISOMAT Tersus housing variant. The operator has an identical display and keyboard to the main device, also with the removable alpha-keyboard, if desired.

Printer, computer connection etc. can also be controlled using the second operating station rather than the main device, if desired.

DISOMAT® Tersus — HERMES Dynamic Axle Load Scales

- **Dynamic Weighing of Road Vehicles**
- **Automatic, Operator-Free Weighing with no Need to Alight or Stop**
- **Monitoring of Axle Loads and Overall Loads While Crossing**
- **Calculation of Weight and Speed Regardless of Drive-Through Direction**
- **Axle Loads and Speed Displayed on an Interactive Terminal**
- **Stoptlights System for Controlling Vehicles**
- **Variable Print Formatting**

Application

Hermes is a dynamic Weighing system for weighing road vehicles axles. The axle load scales are ideal for situations where there is, for example, insufficient space to install vehicle scales and if the scales are not required to perform further calculations. Whereas a vehicle on a static axle loads scales must come to a full stop, the dynamic scales can weigh vehicles as they drive slowly across. The weight is calculated by automatically adding the axle loads. The calculated data can be recorded onto a printer or an electronic storage medium. Alternatively, the system can also be connected to an on-site computer system via a number of possible interfaces.

Equipment

The system is supplied with the DISOMAT® Tersus weighing electronics and the software package for HERMES. The weighing system attached to the scales can filter interfering factors out with the use of a number of variable parameters and can also determine vehicle speed in addition to the weight. The maximum vehicle speed can be up to 13 km/h. The accuracy depends heavily on the road holding in front of and behind the weighbridge. The results are influenced by the construction (axle suspension, suspension characteristics) of the vehicles to be weighed, as they are not positioned entirely on the scales.

Function

HERMES comprises the basic functions:

- Calculation, monitoring and display of axle loads and overall loads
- Input of the vehicle license number
- Contact settings for "Ready", "Weighing Valid", "Weighing Invalid", "Too Heavy"
- Calculation of speed
- Calculation of weight, regardless of the direction of travel
- Drive-through controlled by a stoptlights system

Further features that may be selected:

- Fully automatic weighing process (automatic, operator-free weighing with no need to alight or stop)
- Connection to a computer/PDA system

Technical Data

Installation length of the dynamic scales	Bridge length may be adjusted in the software program
Weighing range per axle	Model 15 t - 20 t
Weighing operation	Dynamic
Weighing accuracy	The axle-load weighing accuracy depends on the local conditions of the scales, in particular on the even surfaces in front of and behind the scales.
Scales' speed range	2 to 13 km/h

A/D Converter DISOBX® Plus

- **Local weighing electronics IP66**
- **One measuring channel per load cell**
- **Can monitor individual load cells**
- **Electronic corner adjustment**
- **Digital transmission of measured values**
- **Fieldbus connection**
- **All components can be replaced without requiring or reverification recalibration**
- **Can be combined optimally with Schenck Process weighing electronics, legal-for-trade PC programs or standard PLCs**

Application

The Schenck Process DISOBX Plus is a multi-channel, on-site analog-digital converter unit.

The output signal of each load cell connected is digitized separately.

This allows the measuring voltage of each individual load cell to be accessed at any time – for many applications an invaluable advantage:

- in commissioning (analysis of dead weight distribution, electronic corner adjustment)
- in operation (analysis of the load distribution on the scales, load cell monitoring)
- and in case of a fault (rapid identification of the components affected)

The digital transmission through a standard fieldbus system is fast, fail-safe and easy to project.

These features make the DISOBX Plus an ideal data recording and control unit for weighing systems – in combination either with Schenck Process DISOMAT® series weighing terminals, or with PC-based weighing systems or PLC controllers.

Typical applications are:

- Road weighbridges
- Bin weighers
- Security relevant overload control systems as per EN ISO 13849

However, the integrated scales functions also enable the device to be operated as a multi-channel scale indicator for, for example, a series of simple bin weighers.

Equipment

The DISOBX Plus has up to 8 measuring channels (model-dependent). One load cell can be connected to each channel. The fact that each individual signal can be accessed individually allows each load point to be calibrated separately (electronic corner adjustment) without requiring the box to be opened, without plugging, soldering, ...

Each channel has its own high-resolution analog/digital converter (not a multiplexer). This makes the DISOBX Plus also suitable for measuring and controlling fast sequences – e.g. of feeds.

The integrated I/O signals allow direct control of time-critical signals such as an overload shutdown by bypassing the connected control systems.

The individual load cell signals can also be accessed separately during operation, in order to e.g. monitor the sensors or, in case of a fault, to localize quickly the source of the fault.

Integrated diagnostics functions in the DISOBOX Plus allow automatic monitoring of the load cell zero-point and the load distribution on the scales.

Individual measuring channels can be bundled together to form a maximum of eight independent groups. Each group corresponds to a complete, legal-for-trade scales, with:

- Filtering of the weight values
- Status determination (idle, ...)
- Tare memory
- Zeroing
- Multi-range / multi-interval function (3 ranges)
- Zero tracking
- ...

Communication

All measured values (channel values and scales weights) can be transmitted on to higher-level systems through the serial interface.

The optional cards available allow adaptation to all standard industry communication systems. Available at this point in time are:

- PROFIBUS DP-V0, data width 256 Byte, max. data transfer rate 12 Mbaud
- DeviceNet

The Modbus-RTU protocol can be connected via the internal serial interfaces directly.

The following protocols are supported by the permanently installed Ethernet interface

- Modbus-TCP
- UDP
- EtherNet/IP (optional)

The Ethernet interface can also be used to configure the device.

Key advantages of communication via Ethernet are the ability to use existing network infrastructures, the high data transfer rate and parallel access of multiple partners to a device (e.g. to make a diagnosis during normal system operation). (External access via internet can of course be restricted as desired or disabled completely by introducing the appropriate privileges).

The DISOBOX Plus serial interfaces are not reserved for communication with the plant control system. Other peripheral devices can also be connected, such as:

- Serial I/O expansion
- Second display or large display
- Printer

Inputs/Outputs

The DISOBOX Plus inputs and outputs (6 inputs/6 outputs, 24 VDC) also allow direct, local process control, in the form of overload messages, feed contacts or release signals.

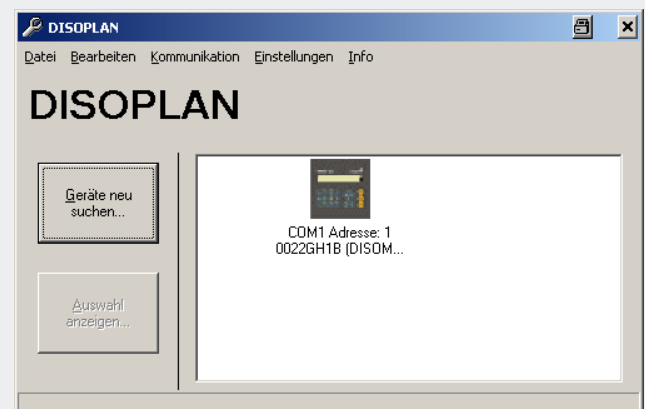

Configuration/Calibration

Used in combination with Schenck Process systems (DISOMAT, PC programs, DISOVIEW X), configuration and calibration are usually performed using the connected master. The configuration program DISOPLAN® is used for comprehensive configurations or if the DISOBOX is used in conjunction with third-party systems. It allows access to all parameters for the complete calibration and can indicate weight values if required.

Furthermore, the complete status of a DISOBOX Plus can be read out (backup) and loaded (restore) into a similar device or a replacement if necessary.

DISOPLAN runs on the platforms Windows 7, 8 and 10. It communicates with the DISOBOXes either:

- Point-to-point
- Via an RS485 bus
- Via Ethernet

Legal-for-Trade Verification

The DISOBOX Plus has EU certification as a legal-for-trade weighing system, both as an A/D converter in combination with a DISOMAT Tersus or the Schenck Process PC software DISOVIEW X or as a stand-alone scales, for instance in combination with a suitable display and operating console.

The certification allows that in case of a fault the complete active electronics can be replaced without the need for adjustment or a re-calibration – all adjustment and calibration parameters are stored in a non-volatile memory in the passive part of the system. Together with the DISOPLAN backup/restore function, this allows downtimes to be avoided effectively.

The system's sealing concept, with no jumpers, normally allows it to keep the DISOBOX always closed. Parameterization and adjustments are made through the serial interface, the legal-for-trade protection is performed by a change counter for the relevant parameter. This removes the risk dirt or moisture entering the electronics during maintenance or calibration.

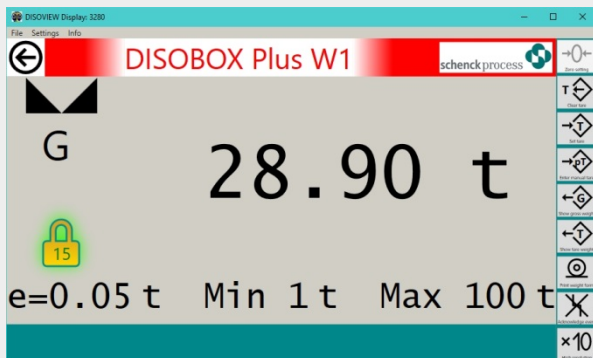

DISOVIEW X

Many data-intensive weighing applications, such as road weighbridges or batching systems, today use a PC as a high-performance and comfortable operator guidance – usually in combination with conventional weighing electronics to implement the legal-for-trade display and the data storage.

The combination of DISOBOX Plus with the legal-for-trade scales program DISOVIEW X opens up a range of new possibilities.

- The DISOBOX is located on-site at the scales
- Data is transmitted digitally to the PC interference-free
- There are no additional devices next to the PC to cause interference
- DISOVIEW X displays the legal-for-trade, comfortable and flexible scales directly on the PC monitor
- The DISOVIEW X application interface allows simple access from the operator program to the data and the scales functions

DISOVIEW X can display any number of legal-for-trade scales.

Accessories

The DISOBOX Plus is powered by a nominal 24 VDC (permissible range 18 - 36 V). This power will often be available on-site.

However, up to three DISOBOXes can be supplied by the VNT 20410 supplementary power supply unit. The VNT 20410 can also convert a serial RS232 interface (PC COM) to RS485. This allows a DISOBOX to be located at a distance of 300 m away.

There is also a scales simulator to test the hardware and the process flow, the VWZ 21000, with which up to 8 load cells can be simulated individually.

DISOBOX Plus units with integrated overvoltage protection for the load cell connections as an optional extra are also available.

Non-Standard Applications

In addition to the weighing applications already described, the DISOBOX can also provide solutions to tasks that cannot be solved using conventional weighing electronics.

- If one does without the individual load cell monitoring option, a group of load cells can be attached to each measuring channel instead (attention must be paid to the overall impedance).
 - In this case, a DISOBOX Plus can measure the weight of up to eight scales (e.g. surge hoppers) and transmit the data to a control system.
 - The fact that each measuring channel can be configured individually means that the DISOBOX Plus allows scales to be constructed with load cells of differing rated capacities or sensitivities, e.g. for systems with greatly differing loads at the individual points of support.
 - This feature allows, for example, the repair of systems with load cells that are no longer available. Instead of having to completely re-equip the scales with new sensors, now the defective load cell can simply be replaced (any restrictions that may apply due to the permissible combination of load cells used must be considered in legal-for-trade systems).
- The DISOBOX Plus is installed in the place of the previous junction box. In many cases even the old measurement cable for serial data transmission can be retained. This can turn a necessary repair into an attractive upgrade.

- Plastic housing

Height: 90 mm Mounting material supplied

- Stainless steel housing: 300 x 200 x 121 mm (L x W x H), fastened with 4 clips, hole distance 330 x 144 mm, max. bolt diameter 10 mm
- Power supply unit VNT 20410

Technical Data

Date	Value
Processor	ARM-9 high-performance controller
RAM	32 MB
Flash	8 MB
EEPROM	16 kB
Clock	Real-time clock, 2 weeks back-up time
Display	None
Keyboard	None
On-site housing	Plastic, plastic cable screw connections, protection class IP66, impact-resistance 7 Joule.
Optional	Stainless steel 1.4301, brass screw connections
No. of measuring channels	4 to 8, model dependant
Load cell power supply	5 VAC
Load cell impedance per channel	44 ... 4000 Ω
Total impedance	>44 Ω
Input signal per channel	0 ... 19 mV
Scan rate	132/s per measuring channel
Connections	4- or 6-wire
Scales	max. 8, the measuring channels can be freely assigned to the scales
Minimal signal voltage	$0.5 \mu\text{V}/d * \sqrt{n}$ n: number of measuring channels per scales
Number of digits in legal-for-trade operation	$N \leq 10,000 d$
Multi-range-/ Multi-interval scales	3 ranges, with each $N \leq 8,000 d$ $E_{\text{max.}} / d_{\text{min.}} \leq 15,000 d$
Linearity error	<0.05 ‰
Zero point stability, Tk_0	<0.6 μV / 10 K <0.03 ‰ / 10 K with reference to the max. input voltage
Range error, Tk_c	<0.03 ‰ / 10 K
Combined error F_{comb}	<0.08 ‰ / 10 K
Supply voltage	24 VDC (18 ... 36 V)
Power requirement	max. 5 W
Temperature range	Service temperature: -30 °C to +60 °C (legal for trade: -30 °C to +50 °C) Storage temperature: -30 °C to +60 °C
Electro-magnetic environment	E2 (OIML D11)
Binary outputs	6 x 24 VDC isolated, max. 100 mA 2 x 3 each with common root
Inputs	6 x 24 VDC isolated, with common root
Serial port	S1: RS485-2-wire DC isolated S2: RS485-2-wire DC coupled S3: RS232 DC coupled 9,600 ... 115,000 Baud
Ethernet interface	Full duplex 100 MBaud
USB interface	1 x USB 2.0 Host
Fieldbus protocol	Modbus, Modbus-TCP
Optional	PROFIBUS PROFINET I/O DeviceNet EtherNet/IP

Display and Operator Panels VOP 280xx/VFG 28000 Keyboard VTT 28000

- **Display and Operating Terminal for DISOMAT®/DISOBOX®**
- **As a Front-of-Panel, Table, Hand-Held or Field Device**
- **Contrast-Rich LCD Display, Suitable for Daylight**
- **Built-In Keyboard**
- **Enlarged Keyboard (Optional)**
- **Protection Class IP65**
- **Approved for Legal-for-Trade Operation**

Application

The equipment of the VOP 28000/ VFG 28000/VTT 28000 series is used as display and control terminals for the weighing terminals of the DISOMAT® and DISOBOX® types. The VOP is the main - Legal-for-trade - display of a DISOBOX® Plus. Its built-in flexible membrane keyboard allows you the entire range of scale operation.

The VOP is used as a remote second control terminal on a DISOMAT® Tersus 'its mirror'. This makes it possible to visualise and operate the scale from a second work station.

Applications could be e.g.:

- Alternating operator's workplaces
- Operated by the set-up man and plant operator
- Mounting the terminal in a remote control room

The VOP can also be used as a secondary display for all DISOMAT® and DISOBOX® units (including older types) without an operating unit (DTA mode).

Construction

VOP equipment is available as:

- Front-of-panel unit (Frontal IP65/NEMA 4X)
- A portable plastic unit with a cable (IP65) or with a storage battery and Bluetooth connection
- Stainless steel unit for desktop- or wall-mounting (IP65)
- Stainless steel field unit for wall-mounting incl. VTT 28000 keyboard and additional operating buttons.

The backlit, transfective LCD display in QVGA format (320 x 240 pixels) ensures excellent legibility both indoors and outdoors in full sunlight.

The devices can be supplied either with 24 VDC or mains voltage. The auxiliary voltage of a DISOMAT® Tersus can be used directly as a power supply. A serial RS485 connection is available as the interfaces to the weighing electronics – another option is using the permanently integrated Ethernet connection.

The integrated USB connection allows the use of a PC keyboard.

Function

The screen of the VOP shows a 1:1 copy of the display of a DISOMAT® Tersus in its mirror function. This is why using the unit as a second control terminal does not require the operator to change habits in any way.

In this operating mode, the buttons on the VOP function parallel to those of the main unit because the button symbols were kept identical. You key in numbers with the 12 function keys and you can overlay help wherever needed.

If numerical inputs frequently are required we recommend the use of the optional keyboard VTT 28000 with numerical 10-digit block (identical dimensions to VOP). Occasional α-entries also are possible using the VTT.

A standard off-the-shelf USB keyboard of any kind can be used for more comprehensive text entries.

It shows the weight of a DISOMAT® unit in large letters in the secondary display operating mode although no input is possible. This operating mode can also be combined with other DISOMAT® units.

Display and Operating Panels VOP 28090/VFG 28090 ATEX 2GD Keyboard VTT 28090 ATEX 2GD

- **Display and Operating Terminal for DISOMAT®/DISOBOX®**
- **Suitable for Explosion-Hazard Environments defined by ATEX Category 2 GD (Zone 1 or 21)**
- **Front-of-Panel or Field Device**
- **Built-in Keyboard**
- **Enlarged Keyboard (Optional)**
- **Protection Class IP65**
- **Approved for Legal-for-Trade Operation**

Application

Operation in explosion-hazard areas. The equipment of the VOP 28090/VFG 28090/VTT 28090 series is used as display and control terminals for the weighing electronics of the DISOMAT® and DISOBOX® types.

The control electronics itself is installed in the safe area. This creates a second operating station in the safe area for one DISOMAT® Tersus. For the DISOBOX® Plus the VOP is the (legal-for-trade) main operating station.

For all DISOMAT® and DISOBOX® devices (including older types) the VOP also can be used in the explosion-hazard area as a secondary display with no operating functions (DTA mode).

Construction

VOP equipment is available as:

- Front-of-panel unit (frontal IP65/NEMA 4X)
- Stainless steel field device for wall-mounting incl. VTT 28090 keyboard and additional operating buttons.

The backlit, transfective LCD display in QVGA format (320 x 240 pixels) ensures excellent legibility.

The devices can be supplied with 24 VDC ±10 %. A serial RS485 connection is available as the interface to the weighing terminal.

A big advantage of the VOP 28090 is the protection class used, 'encapsulation' (Ex m). It allows the device to be connected in an explosion-hazard area WITHOUT requiring safety barriers or switch amplifiers.

Function

The screen of the VOP shows a 1:1 copy of the display of a DISOMAT® Tersus in its mirror function. Thus the user does not need to learn to use a new device.

In this operating mode, the buttons on the VOP function parallel to those of the main unit because the button symbols were kept identical. You key in numbers with the 12 function keys and you can overlay help wherever needed.

If numerical inputs frequently are required we recommend the use of the optional keyboard VTT 28090 with numerical 10-digit block (identical dimensions to VOP). Occasional α-entries also are possible using the VTT.

It shows the weight of a DISOMAT® unit in large letters in the 'secondary display' operating mode although no input is possible. This operating mode can also be combined with older DISOMAT® units.

The large buttons of the field device can be assigned flexibly to the device functions.

Secondary- and Large-size Display Units

- High contrast, easily-readable display
- Rugged industrial design
- Protection type as far as IP65
- Temperature range to -30 °C ... $+60\text{ °C}$
- Legal-for-trade

Application

The digital display units are designed for large-size display of weight values. They are used on all industrial weighing systems which require the weight to be read from long distances, e.g. crane scales, scales for racking systems, road weigh-bridges.

Equipment

The display uses either LED- or LCD-technology, depending on type. The swivel housings are fixed with mounting brackets.

Functions

Display of the weight value with additional symbols for sign, unit and operating status.

DISOPRINT VPR 20150 Flat Bed Printer

- Printing of cut sheets and weigh cards
- Easy and convenient insertion of forms through print table open on three sides
- Compact and rugged design for industrial use

Application

DISOPRINT VPR 20150 Flat Bed Printer is designed especially for printing of cut sheets, form sets and weigh cards.

It is approved as printers for legal-for-trade scales, with DISOPRINT VPR 20150 as local printer.

Equipment

Printer parameters are set menu-controlled via function keys. One ribbon cassette is supplied.

Function

Paper infeed is automatic, with forward/reverse retention. Characters can be represented both horizontally and vertically. To enable left area of wide form sets to be printed, print pattern can be turned by 180°. Line feed is automatic.

Technical Data

	DISOPRINT VPR 20150

DISOVIEW X

Legal-for-trade scales window for Windows PCs

- Legal-for-trade weight display on standard Windows PCs
- Twin-unit scale functionality
- Legal-for-trade printout
- Network-compatible
- Intelligent parameter backup concept
- Application interface
- Interface to the DISOSAVE X legal-for-trade memory

Application

Today's demands for numerous weighing equipment applications has driven the requirements for a convenient and standardized user interface and / or necessary access to large memory areas; often even distributed in the network.

Standard PCs, typically with a Windows operating system, are often used here as the platform.

Weight displays on these systems are generally not legal-for-trade secondary displays. However, it is necessary to have the display of legal-for-trade weighing electronics as the primary display in the user's field of vision.

DISOVIEW X allows the integration of the 'legal-for-trade weight display' into the standard PC. The need for a visible secondary display is thereby removed.

Function

DISOVIEW X provides a legal-for-trade weight display on a standard Windows-PC. The displayed weight shown can come directly from connected weighing electronics of the type DISOMAT® / DISOBOX® / CONiQ® Control (display function).

In addition, DISOVIEW X can calculate and display the total of multiple single load receptors (twin-unit scale function).

Any number of scales (singly or connected) can be managed and displayed.

The displayed scale can be operated (acquire tare, clear tare, set to zero) and a legal-for-trade printout can be triggered.

An application interface allows DISOVIEW X to be connected to more complex IT systems. The interface is documented in the Programming Manual

Optionally, the legal-for-trade data can be stored in the DISOSAVE X legal-for-trade memory. It can be recalled there at any time for checking or evaluation.

The weight window (fig. 1)

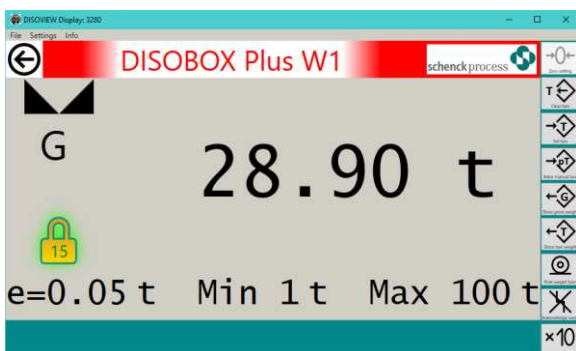

The DISOVIEW X weight window displays the weight of the respectively displayed scale, together with further information, for example regarding the tare status.

The button bar next to the weight is for operating the displayed scale.

DISOVIEW X allows multiple, independent weight windows to be shown, which display the weight from the same or different scales. These windows can also be shown on different computers in the network.

The size of the weight window can vary to a large extent. However, it cannot be moved from the visible screen area (in legal-for-trade applications) or covered by other applications.

Fig. 1: Weight window

The configuration window

In the configuration dialogs (fig. 2 and 3), it can be specified for each of the configured scales

- The source of the individual weights
- What type of device is involved

At present, the following scale types are supported:

- DISOMAT® Tersus
- DISOMAT® OPUS
- DISOBOX® Plus
- CONIQ® Control
- Twin-unit scale with any number of parts

Fig. 2: Create scale

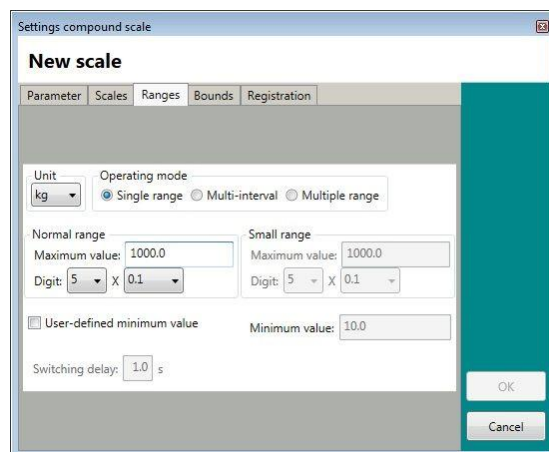

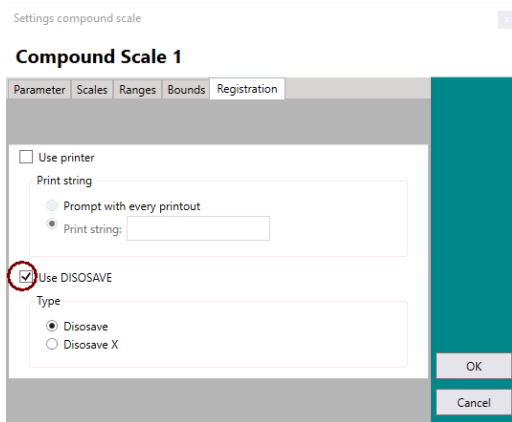

Fig. 3: Detailed image of legal-for-trade parameter

Recording

Whether and where the scales data is recorded can be specified for each scale. It is possible to choose here between printout (on any installed printer) or storage in the DISOSAVE X legal-for-trade memory (fig. 4).

Fig. 4: Recording dialog

The data backup concept

All the DISOVIEW X parameters are stored in a manipulation-protected file on the PC.

This parameter set also includes the model and serial number of the connected devices.

During start-up, the program checks these data record and the connected devices.

If the data record is intact, DISOVIEW X enters legal-for-trade mode. If the data record is damaged or if the configured devices are not found, the program opens in not-legal-for-trade mode. Legal-for-trade weighing and printing is no longer possible.

This data backup concept allows the entire parameter set to be exported (backup). If necessary, the data record can be imported into another PC with DISOVIEW X.

After connecting the correct device, legal-for-trade weighing mode is possible. In this way, for example,

it is possible to exchange the PC without problems if it is defective.

Network operation

The specific communication mechanism between DISOVIEW X and the connected scales makes it possible to transport the weighing data through local networks, i.e. the PC to which the scales are connected locally does not have to be the same one that DISOVIEW X displays the data on legally-for-trade (legal-for-trade conditions, for example with regard to visibility of the scales by the user continue to apply, of course).

DISOSAVE X

PC legal-for-trade memory for Schenck Process weighing electronics

- Long-term memory for legal-for-trade weighing data
- Solution for Standard WINDOWS PC
- Suitable for 24/7 operation
- Can be installed as Service
- Modern user interface
- Conforms to current calibration requirements
- Export functions

Application

The legal-for-trade memory program DISOSAVE X provides the user with the following functionality:

- Legal-for-trade storage of weighing data on the PC's hard drive.
- Legal-for-trade displaying, evaluation and printing of the saved values.

DISOSAVE X has an EU approval (Parts Certificate, PC) as legal-for-trade long-term memory. The type of data storage guarantees a high level of security against the loss or falsification of data. The combination of standard-PC + DISOSAVE realizes the legal-for-trade data storage on the user's PC.

Construction

PC program for WINDOWS 7 / 10 / Server 2012 ff for legal-for-trade storage of weighing results. Delivery on CD for installation of the program on a standard PC.

Legal-for-trade storage of weighing results with DISOSAVE X

The legal-for-trade long-term memory directly performs the role of the alibi printer – however is it completely maintenance-free.

The data storage is triggered either by another PC program (DISOVIEW X, MULTIRAIL) or data is mirrored from the internal legal-for-trade memory from one or more connected weighing electronics.

Automatic backup functions facilitate a secure 24/7 operation of the installation.

Display / Evaluate

Apart from the secure and convenient saving of weighing results, DISOSAVE offers additional functions for displaying and evaluating the saved values.

This includes the following functions:

- Displaying the complete legal-for-trade memory. All entries are displayed, sorted by date / time of storage.
- Display of selected entries: The filter function can be used to restrict the display to selected, saved entries.
- The following filters can be applied:
 - Date / Time
 - Sequential number
 - In the string of existing character chains
 - Character chains in the print string

Data Export

The registered data can be exported – completely or filtered – in various formats

- Excel
- WORD
- PDF

Communication

DISOSAVE X communicates with the weighing electronics either by

- Ethernet (MODBUS-TCP) or
- Serial (MODBUS-RTU)

Modbus OPC Server VPC 28004

- OPC Server for weighing terminals
- Fast and simple access to process data of the terminals
- Write and read access
- Connection to the terminal through Ethernet or through serial interface

Application

In the automation segment, OPC (= *OLE for Process Control*) has established itself as the standard. OPC enables the cross-manufacturer communication between devices without the expansive and error-prone implementation of protocols and without exact knowledge of the memory places.

The Schenck Process Modbus OPC Server implements this idea consistently. It permits access to the process data of the DISOMAT / DISOBOX / DISOCONT / INTECONT equipment of each OPC-capable application (OPC client). Access is achieved through logical names and independent of the selected physical transmission method (Ethernet or serial).

Structure

The Modbus OPC Server will be installed on the PC, which also runs the application software and which wants to access the data.

Other OPC client computers can also use this Modbus OPC Server, because OPC is configurable for remote access.

The server realizes a proxy (=substitute) of the scale(s). The application treats this as if the scale would be part of the PC.

The physical connection of the terminals is provided serial (through a COM port of the computer) or through Ethernet (network access).

Function

The Modbus OPC Server permits read access for the most important process variable of the connected devices. This is possible through a single query and also through cyclical access (e.g. for weight and status values).

The setting of values is also possible (e.g. tare weights or print texts).

Communication Modules for PCS 7, TIA and STEP 7 to SIEMENS Controllers

Faceplate: DISOMAT Tersus

- Simple, rapid connection of the scales to SIMATIC controllers
- Complete communication modules for PCS 7, TIA and STEP 7
- The programmer can parameterize the existing modules at any time
- PCS 7 modules have faceplates to visualize the weighing data
- Compatible with PCS 7 release 8
- The scales is portrayed in the system as a SIEMENS component (in Hardware configuration)
- Easy editing of statuses and commands for setpoints and measured values
- No complicated programming required for fieldbus communication
- All scales values are directly available as binary or numerical values

Applications

Many of the Schenck Process weighing electronic systems are coupled with SIEMENS controllers from the SIMATIC S7 series. This coupling is often implemented by the customer or on their behalf. PROFIBUS or PROFINET are used as a medium of communication. This often involves significant effort and furthermore the same solution is often re-implemented by different programmers. With the aid of the communication modules the weighing electronics can be integrated into automation systems with little effort.

Structure

The use of PCS 7 modules, the TIA library or the STEP 7 library means that the customer or the supplier of the control system no longer needs to program the PROFIBUS/PROFINET connection to the weighing electronics themselves.

The communication details remain concealed from the PLC programmer. The programmer needs only to specify the data and parameters desired at the moment of configuration. Both the PCS 7 modules and the TIA and STEP 7 libraries support all of the fieldbus-capable Schenck Process weighing electronics.

Function

PCS 7 modules

Each of the PCS 7 modules has a 'Faceplate' that shows the most important weighing data in a PCS 7 graphical display.

Furthermore, the module uses the WinCC detection system integrated into the PCS 7.

A module from the TIA or STEP 7 libraries should be used for implementation in a SCADA solution.

TIA library, STEP 7 library

Today, many installations are realized using SIEMENS SIMATIC S7 systems and programmed in TIA or STEP 7.

The STEP 7 library is a collection of routines for the SIMATIC S7-300 and 400 series that implement access from the control program via PROFIBUS/PROFINET to scales data or the transfer of commands and setpoints to the weighing electronics.

There is a corresponding module for the TIA portal for newer series S7-1200/1500 controllers. In this case communication ought to be carried out using PROFINET.

Expansions for editing statuses and commands and for setpoints and measured values can be easily implemented in a familiar programming environment.

Main difference to the PCS 7 modules:

The STEP 7 library routines do **not** have faceplates or WinCC messages.

The graphical visualization of a module shows inputs (commands, setpoints, etc.) in the left-hand column and status bits and measured values in the right-hand column.

The wireless way to your scale – Bluetooth radio modules

- **Wireless configuration of your weighing electronic systems**
- **Replace cables by a radio link**
- **Perfect access via EasyServe or DISOPLAN**
- **Wireless service bus to several electronic systems**
- **Configuration from a "safe distance" with greater convenience in a clean environment**

Application

These modules enable you to parameterise and configure all weighing electronic systems without requiring a serial interconnecting cable.

The modules can be used for units of the DISOCONT[®], INTECONT[®], DISOMAT[®], and DISOBOX[®] families.

This enables the operation of the service tool in a clean environment.

Using these modules on several DISOCONT[®] feeders replaces the service bus.

Equipment

The Bluetooth function modules are only intended for use for service and start-up work with weighing controllers.

There are different modules with ranges up to 100 m (Bluetooth class 1) and 30 m (Bluetooth class 2).

The class 1 Bluetooth module has an external antenna while the class 2 module has a built-in antenna.

DISOMAT[®] Tersus has an optional internal Bluetooth communication module (class 1) plugged directly into the mainboard.

The 2-meter connecting cable allows to placement where it is best for the radio link.

Both modules are select to IP65.

The modules are fastened with two external straps. Built-in LEDs provide information on status and data transmission.

Function

The communication to the weighing controller is realized via serial interface. The module is powered up through the weighing controller except with DISOMAT[®] Opus INTECONT[®] Opus or INTECONT[®] Satus, where an extra power supply unit is needed.

The product's primary purpose is for service and start-up. The Bluetooth module is initially not yet suited for loading programs into the weighing controller.

VFM 28000 Radio Module

- Radio modem substitute for cable connections between scales system components or between scales and plant system
- RF modems, broadcast-license free Europe-wide Frequency band: 869 MHz
- Radio range 250 m (with clear line of sight)
- Multi-channel compliant
- Bluetooth radio module (class 1) range 100 m
- Protection class IP65
- Approved for legal-for-trade operation

Application

The VFM 28000 radio module is used as a substitute for cable connections in situations in which installation of cables would be unnecessarily expensive, if cables could be easily damaged or if cables cannot be used.

Typical applications are:

- Coupling of weighing electronics to a crane crossbeam (replacing a cable drum or a trailing cable installation)
- Connections between mobile plant components, containers free to move to a degree, or operating panels in vehicles
- Connections over long distances between plant components, in particular across open spaces
- Communication between a DISOMAT and a mirror device or a VOP display device or communication with a DISOBOX (with the RF modules only)
- Control of a large display or a printer

Combined with the DISOMAT and DISOBOX series analysis devices, the VFM modems are also certified for the transfer of legal-for-trade data.

As radio frequency modems the VFM devices require no broadcast licenses anywhere in Europe – national legislation must be referred to outside Europe.

The Bluetooth version can be used worldwide.

BV-D2403GB

Design

A housing with a high protection class forms the basic unit of all VFM modules. This basic unit contains the power supply and the serial interfaces. Without any further modules, this basis unit can be used as a power source for 24 V devices or as an RS232 ↔ RS422 interface converter.

Additional HF modules will result in RF radio modules with a frequency of 869 MHz and ranges of 250 m, or class 1 Bluetooth modems with ranges of 100 m.

The Bluetooth modules have an internal antenna whereas the RF modules are supplied with a suitable antenna with a magnetic base (1.5 m cable).

The Bluetooth modules can be used in pairs. However, if e.g. connected to a PC, they can also be connected individually with another Bluetooth partner (e.g. USB-BT).

In many applications the VFM can also provide power to connected 24 VDC devices (large format displays, operating units, weighing electronics).

Function

In the simplest configuration the VFM modules are used in pairs as a replacement for a serial interface. For serial baud rates of up to 9600 a route can be established without further configuration.

Higher baud rates and parallel routes can be operated, but the devices must be reconfigured. The configuration software is supplied with the DISOMAT documentation software.

We recommend consulting Schenck Process beforehand if dealing with such a situation.

Multi-point connections can also be established, such as the addressing of several analog-digital converters via one master. In these cases also the concept should be discussed in advance.

The ranges given in the technical data apply to open spaces only and only if there is a direct line of sight between the modems. Under more complex operating conditions – such as indoors in halls – we recommend performing measurements before selecting the required equipment.

Technical Data

External dimensions L x W x H [mm]	220 x 120 x 91
Interfaces	1 x RS422-4-wire for communication over longer distances 1 x RS232 Can be operated as an RS232 ↔ RS422 converter
Supply voltage DC	24 VDC (range: 18 ... 36 VDC); typically 10 W
Max. data rate (HF side)	38,400 Baud (LR design: 19,200 Baud)
Supply voltage AC	85 ... 264 VAC
Protection class	IP65, NEMA 4X
Operating temperature range	-20 °C ... 60 °C

Order Numbers

Type	Description	Material Number
VFM 28000 Basic unit	Suitable as a 100 ... 240 VAC → 24 VDC, 10 W power supply and as an RS232 ↔ RS422 inter- face converter	V081931.B01

Scale Simulators, Types DISOTEST 11 and VWZ 20410

- Simulation of 2 complete scales, or 8 single load cells
- Presetting of input signals
- Display of output signals
- Compatible with all DISOMAT weighing electronics
- Designed for functional testing of system and testing of configuration outside the plant

Application

Designed to simulate all peripherals of the weighing electronics, Scale Simulators DISOTEST 11 and VWZ 20410 enable a measuring system to be tested outside the plant without disruption to normal operations.

Furthermore, settings and/or configured sequences can be tested and optimised outside the plant.

Equipment

DISOTEST 11 simulates max.

- 2 scales
- 8 binary inputs
- 12 binary outputs.

Using adapter cables, the base unit is adjusted to the different DISOMAT variants.

VWZ 20410 is designed to simulate up to 8 load cells for the local A/D converter unit, the so-called DISOBOX.

Equipment Supplied:

K002807.01	Scale Simulator DISOTEST 11, base unit
K002816.01	Cable 2 for DISOTEST 11, for simulation of scale on DISOMAT T, B, C
K002820.01	Cable 6 for DISOTEST 11, for simulation of DISOMAT T inputs/outputs
D739126.01	Cable 11 for DISOTEST 11, for simulation of scale on DISOMAT B plus or DISOMAT Tersus (max. 2 connectable to one DISOMAT)
D739127.01	Cable 12 for DISOTEST 11, for simulation of DISOMAT B plus inputs/outputs
V032070.B01	Cable 13 for DISOTEST 11, for simulation of scale on DISOMAT B plus Ex
V032071.B01	Cable 14 for DISOTEST 11, for simulation of DISOMAT B plus Ex inputs/outputs
V040060.B01	Cable 15 for DISOTEST 11, for simulation of scale on DISOMAT Opus/Satus
V040061.B01	Cable 16 for DISOTEST 11, for simulation of DISOMAT Opus inputs/outputs
V054061.B01	Cable 17 for DISOTEST 11, for simulation of DISOMAT Tersus inputs/outputs
V024383.B01	Load Cell Simulator VWZ 20410 for DISOBOX A/D converter

Terminal Boxes Types VAK and VKK for Sensors

- Easy to install
- Different variants for extension or summation of load cell cables
- Suitable for use in hazardous areas and severe environments
- Highly resistant to aggressive media
- Optional overvoltage protection

Application

The **cable boxes**, types VKK 280x1, are designed for extension of the load cell connecting cable.

The **cable summation boxes**, types VKK 280x6, VKK 280x4 and VKK 280x8, are designed for interconnecting the load cells of a scale.

In case of high demands on weighing accuracy, the built-in series resistors can be used for corner adjustment.

Thanks to the plug-in jumpers balancing is especially easy and time saving.

Depending on the application, the **junction boxes** type VAK can be used for mere extension of the load cell connecting cable and other sensor lines, but also for summation of the signals of multiple load cells (without corner adjustment).

Design

The VAK/VKK terminal boxes are made of aluminium diecast, polyester or stainless steel.

For easy mounting within the terminal box, all cable connections are screwed in place or clamped.

Polyester cases are equipped with plastic cable screw connections, aluminium and steel cases are equipped with bronze screw connections - steel ones are available as an option.

Performance

As cable summation box, types VKK 280x4 are available for 4 load cells, types VKK 280x6 for 6 load cells and VKK 280x8 for 8 load cells.

The terminal boxes are universally applicable. For high temperatures or used in explosion hazard environments (up to approx. +100 °C – with use of appropriate cable and special cable glands 150 °C are possible), housings are made of aluminium.

If the terminal box is exposed to aggressive media or mounted in severe environments, polyester housings are preferred.

The stainless steel housings are suitable for both application areas.

Load cells both with 4- and 6-wire cable can be connected.

All terminal boxes VKK are equipped with potential-equalization rail for correct connection of the potential-equalization lines.

All boxes guarantee that the correct cable screen connection has been made.

Terminal boxes for use in explosion hazard areas of category 2G/2D remain available.

Measuring, Data and Control Cables

- Precisely tuned to devices
- Screened against electrical interference fields
- Perfectly isolated
- Hardly inflammable

Application

- Cables interconnecting the electronic scale components have a decisive influence on reliability and availability of these components.
- The use of interconnection cables must not reduce the electromagnetic compatibility (EMC) of single devices. Device protection has to be retained on cable inlets as well.

Construction

- The load cell, data and control cables selected here are tuned to the weighing components:

Screening and stranding in pairs protect cables from electromagnetic interference and electrical disturbances.

Function

- The cables are designed in accordance with international safety standards, especially with respect to hazardous area applications. In addition, they are hardly inflammable and non-ageing.
- Defined outer diameters and ageing stability ensure a high degree of protection and tight sealing of cable inlets.
- The cables ensure stable and accurate signal transmission even over great distances.
- High insulation resistance and 6-conductor technology provide long-term accuracy.
