

Wye Line Diverter Valve

- Maximum air pressure 15 PSIG
- Hard, food grade polymer seals and corrosion resistant construction
- Superior shearing action
- Powerful double acting air cylinder
- Self-cleaning on free-flowing materials
- Materials contact with seals is minimized

The Wye Line Diverter Valve is completely automatic and compact. The application of 2, 3 or 4-way diverters provides a versatile selection for multiple sources or destination. The diverter's unobstructed orifices and sliding orifice blades provide improved air conveying system performance, cleaner operation, reduced valve wear and minimal shearing of materials.

The Wye Line Diverter Valve is also equipped with hard, food-grade polymer seals and light weight corrosion-resistant construction. The valve offers positive sealing in both vacuum and pressure conveying systems, and diversion of air and materials in dilute phase pneumatic conveying systems.

Options

- Installation versatility with 2, 3 or 4-way diverter valves
- Housing material: stainless steel, aluminum or carbon steel
- Choice of air control valves and position proof switches
- Oversized air cylinder option
- Hand wheel or electric actuators
