

Bulk Material Handling & Processing Solutions for Lithium

LiOH & Li₂CO₃ Chemicals

- » Pneumatic Conveying
- » Feeding
 - » Dust Collection
- » Bulk Bag Unloading
- » Calcining
- » Pulverizing

With the growth of mobile devices, electric cars, and utility-grade energy storage increases the need for lithium-ion batteries. Whether your lithium originates in ore or a brine deposit, Schenck Process offers a wide range of bulk material handling and dust collection systems that allows us to provide equipment solutions through various stages of lithium processing.

Lithium Ore Processing

The Schenck Process Raymond Mills and Bartlett-Snow calciners, rotary kilns, and coolers are designed to obtain the desired particle size and chemical composition. LST Filters remove dust and other harmful airborne materials.

Typical Pulverizing System

Typical Thermal Processing System

Pulverizing

Designed to dry, pulverize and classify

- Provides efficient control of product size with minimal power
- Maximum flexibility and control over mill variables
- Custom designed for your processing application

Calcining / Kiln

For high temperature processing of granular products and powders

- Known for high online availability and operational integrity
- Extensive range of systems, components, and services
- Designed and manufactured with exacting standards

Air Filtration

Pulse jet filters for dust collection applications

- High efficiency dust removal systems
- Bags are easily removed for routine maintenance
- Plenum can be designed as a walk-in so the filter media replacement occurs in an enclosure

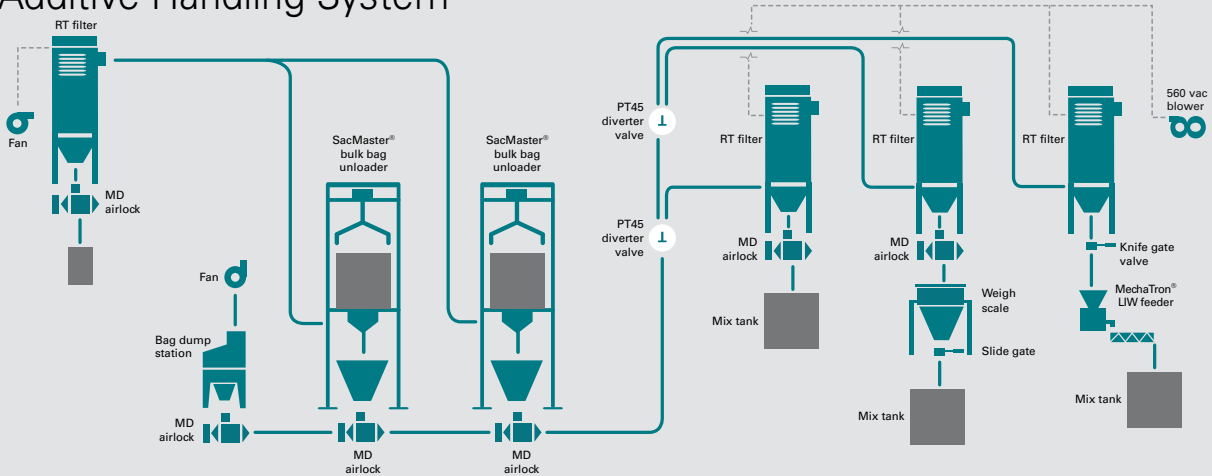

Lithium Additive Systems

Bag dump stations or bulk bag unloaders are used together with pneumatic transfer systems that discharge the product into a loss-in-weight feeder, a weigh scale, or other process equipment.

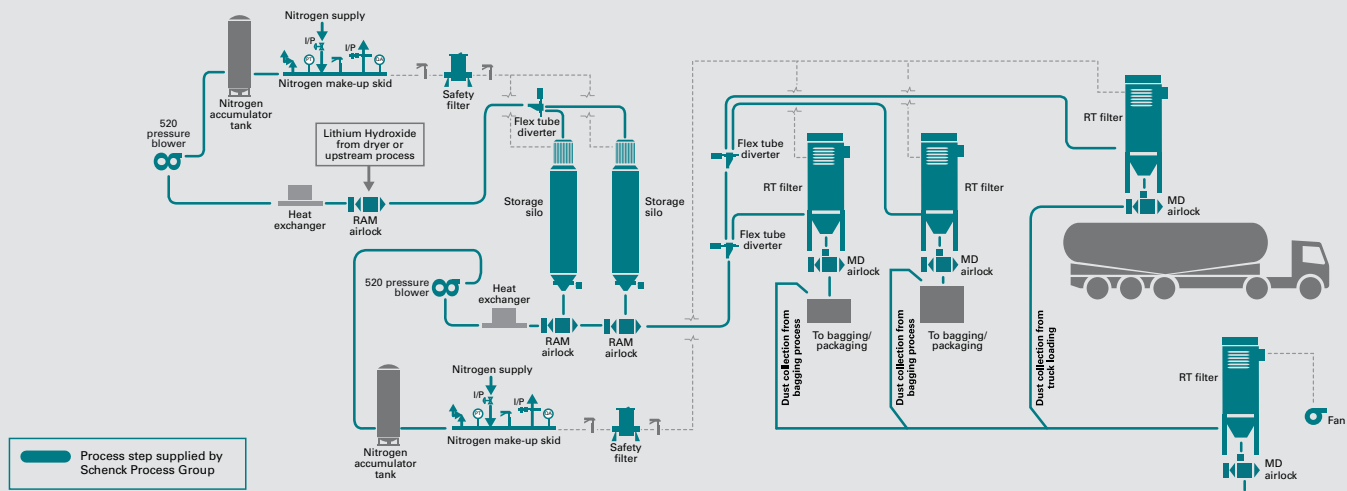

Lithium Carbonate and Lithium Hydroxide Transfer Systems

Open loop or closed loop pneumatic conveying systems can be designed and supplied based on specific site requirements. Whether transferring battery grade lithium powder from a dryer to a storage silo or from a silo to packaging equipment or a bulk truck, Schenck Process can provide a complete transfer solution.

Typical Additive Handling System

Lithium Hydroxide/Lithium Carbonate Storage & Transfer Systems

Pneumatic Conveying

Low pressure systems

- Dense and dilute phase, vacuum or pressure
- Systems for abrasive or fragile materials
- Easy to convey from a single source to multiple locations
- Convey over long distances

Bulk Bag Discharge System

Bulk bag frame for full bag emptying

- Posi-flow agitation to eliminate material bridging and promote full bag emptying
- Two agitation and two pivoting paddles for full bag support
- Modular design for easy system customization and compatibility

Feeding

Wide range of models and feed rates

- Volumetric or gravimetric configurations
- Easy disassembly for quick maintenance
- Internal agitation promotes material flow
- Feed rates up to 1,100 ft³ per hour
