MULTIBELT® Multi-Idler Belt Weighers

- Continuous bulk solids measurement in belt conveyor systems
- Suitable for flow rates up to 20,000 t/hr
- Accuracy up to ± 0.25%
- Also legal-for-trade-version
- Suitable for IEC belt widths
- Suitable for use in ATEX explosion-zones

Application
Multi-Idler Belt Weighers are used for continuous acquisition of flow rates and totalized amounts. They are especially designed for integration into continuously operating belt conveyors and enable accuracies of up to ± 0.25% to be achieved. They can be employed for a whole variety of tasks:
- Throughput and consumption measurement in production plants
- Accountability of stored and retrieved amounts
- Load limit alarm
- Batching, in load-out stations
- Legal-for-trade weighing
- Prefeeder control.

Their rugged design ensures a high degree of reliability and availability.

Our product range is as varied as the demands of our customers. For Single-Idler Belt Weighers, see separate Spec Sheet BV-D 2049.

Construction
The standard Multi-Idler belt weigher comprises:
- Weighing platform for accommodating user’s idler sets
- Overload-protected load cell(s) with high degree of protection
- Cable junction box for connection of sensors, and
- All fixing elements required for mounting.

For speed measurement, various speed transducers e.g. friction wheel tachometers, are available as options.

Operating Principle
Belt Weighers are used to acquire continuous material flows of varying amounts.

Load cells acquire the weight of load on particular belt sections. The longer the belt section is, the less the measuring result is affected by external influences.

In addition to belt load acquired by load cells, belt speed is measured by a speed transducer.

The product of these two variables is the current flow rate.

Integration of flow rate determines the totalized amount of material.
Dimensions [mm]

**Dual-Idler Belt Weigher BMP**

- Effective platform length: 2 weighing stations arranged side by side for belt widths from 1600 mm.

**Dual-Idler Belt Weigher 2 BMP**

- Effective platform length: 2 BMP weighing stations arranged one after the other to achieve higher accuracies.
- (Weighing station dimensions are the same as those of the BMP weighing stations)

**Multi-Idler Belt Weigher BMC**

- Tension-compression tie-rod (500 mm long).
- Load cell mount

- Effective platform length: 4 m standard platform length, 6 m also possible.
- Weighing platform can be provided by user.
### Technical Data

### Accuracy

Specified accuracies refer either to nominal (maximum) flow rate or to the corresponding actual flow rate in the range of 20 to 100 %.

The accuracy specified for the 2 BMP / BMC types refers to corresponding actual flow rate in the range of 30 to 100 %.

Specified accuracies assume that the variant is installed in a suitable belt conveyor and that the measuring station is installed and calibrated in accordance with our installation and calibration instructions.

For optimum planning-in of your belt weigher(s), see Spec Sheet F9151e 'Recommendations for ensure proper functioning and high accuracy'.

### Special Requirements

Should you have special requirements, e.g.
- Legal-for-trade variants
- Belt speed out of specified range
- Meter for varying belt angle
- Prefeeder control
- Special belt widths
- Special belt conveyors, please let us know.

### Ordering Data

For us to be able to handle your order smoothly and quickly, please let us have the data below in addition to the ordering number:

- Belt width [mm]
- Flow rate [t/h]
- Belt rise [°]
- Belt speed [m/s]
- Accuracy [%]

Nominal flow rate ( )
Actual flow rate ( )
