

CONiQ® Control

Next generation of industrial weighing control systems

High ergonomics of human-system interaction

Operation via mobile devices

Functions are determined by software

Easy service access

Advantages of the CONiQ® Control:

Intuitive touch control

Web-based user interface

Modular design

Simple system integration

Remote service

The CONiQ® Control is an innovative and flexible weighing control system for various industrial weighing applications and process controls.

In accordance with the latest requirements, both hardware and software are modular and can be combined to suit to the relevant application and/or environment.

The CONiQ® Control was developed in an iterative, human-centric design process in close cooperation with experts for user interfaces and with customers. Awarded the reddot award 2019, the touch control interface intuitively guides the user through the program directly on the device or also using web-based remote access.
